The rapid rise in the cost of living since 1914 has been accompanied by an increase in the wage scale in almost every occupation. With a very few exceptions, however, there is none in which the wages represent an increase in the power to purchase commodities. The reverse is in fact the case, and in this way the wage earner who does not contribute through the income tax, corporation tax, etc., has been required to bear his share of the cost of the war. If prices retain their level fairly well after the war and business activity is fairly good, the present wage scale will undoubtedly be maintained. On the other hand, if prices decline to any extent, as is expected, labor interests must recognize the fact that their remuneration will be reduced accordingly. The argument of increasing cost of living has been universally used in advocating wage increases, and workers must be prepared to accept the argument of declining prices as sufficient cause for wage reductions.

Mr. Berry stated that the membership of the union would fight to the bitter end any attempt on the part of the employers to reduce wages and that it was a patriotic duty to keep wages high. No doubt he had in mind the continuance of the present cost of living and industrial activity. If these factors alter, however, and wages should accordingly reduce, employees have no cause for complaint unless the reductions be made with undue haste. It is ordinarily the case that during a period of rising prices the wage earner is at a disadvantage because prices and industrial profits increase more rapidly than does the remuneration of labor. In other words, the wage earner is always a little behind. On the other hand, it is supposed that during a period of falling prices he has the advantage because it is harder to reduce wages, which are fixed more or less by custom and agreement, than it is for prices to fall in the open market of supply and demand.

CANNOT ESTIMATE WESTERN WHEAT CROP YET

Dr. Magill, secretary of the Winnipeg Grain Exchange, who is in Ottawa, states that the annual estimates of the exchange for the grain crops will not be out before the middle of September. He said that there were so many divergent estimates that it would be better to wait until the official figures were out. The wheat output of the three prairie provinces may be anywhere from [illegible] else. It is certain, however, that there will not be as large a wheat crop this year as last. Frost in the three provinces is mainly responsible for this.

The Victorian government has purchased [illegible] acres, costing nearly $2,000,000, for a soldiers' settlement. The federal government has established a directorate of educational war propaganda.

BELL TELEPHONE FRANCHISE SITUATION*

Relations of the Company With Ontario Municipalities is Discussed in Toronto

BY HENRY B. ASHPLANT,
Alderman, London, Ont.

In recent years the Bell Telephone Company has systematically pursued the policy, in Ontario particularly, of refusing to renew its obligation to pay, to municipal corporations, any financial consideration for the very valuable franchise right to erect poles, and to occupy land upon which such poles are erected; for local telephone service within the municipality; such poles for local service not being entitled to rank with "long distance lines connecting the central exchange" with "a central exchange in another municipality," as defined in sub. sec. (c) of sub. sec. (1) of section 248, of the Railway Act, R.S.C. chap. 37, which governs the powers of the Bell Telephone Company in the Dominion of Canada.

The city council, of London, Ont., has challenged the right of the Bell Telephone Company to occupy land, and depreciate the value of such land within the municipality, by erecting poles thereon for exclusively local service, except on payment of an equitable financial consideration to the municipality for the said privilege.

In view of the refusal of the Bell Telephone Company to renew, in 1916, an expiring agreement with the city of London, for an annual consideration of $3,000 (formerly $4,000) for its local franchise, action was taken to bring the issue before the "Union of Canadian Municipalities," at London, in August, 1917, when the following resolution was adopted, (seconded by Mayor Bowlby of Brantford, Ont.), and recorded, in October, 1917, issue, of the "Canadian Municipal Journal."—

Municipalities to Control Their Local Franchises.

Resolution: Moved by Alderman Henry B. Ashplant. "Whereas, it is desirable that the constitutional right of municipalities to control their own local franchises, should be protected against the abuse of Dominion charters, by such corporations as the Bell Telephone Company, and others, and:"—

"Whereas, the Bell Telephone Company claims the power under its Dominion charter to occupy real estate in any municipality for the erection of poles for local service, and denies the right of the local councils to collect a fair commercial value in exchange for the use of such rights and privileges."

"Therefore, the executive of the Union of Canadian Municipalities is instructed to take such steps as may be necessary to effectively oppose the said pretensions, and in order to effectuate the purpose aforesaid, this Union of Canadian Municipalities respectfully request the Dominion government to have such legislation enacted as will define the absolute right of the municipal councils to control their streets, and compel the Bell Telephone Company of Canada to pay every municipality whose streets they use such sums as may be agreed upon between them, or in the absence of such agreement such sum as the Board of Railway Commissioners shall fix and determine."

This action was followed by adoption of similar action at the 1917 annual meeting of the Ontario Municipal Association at Toronto; as recorded in the November, 1917, issue of the "Municipal World," namely:—

Moved by Mayor J. W. Bowlby, of Brantford; seconded by Mayor Burgoyne, of St. Catharines: "That the Ontario Municipal Association respectfully request the Dominion government to have such legislation enacted as will define the absolute right of the municipal councils to control their streets and **compel the Bell Telephone Company of Canada to pay to every municipality whose streets they use such sums as may be agreed upon between them,** or in the absence of such agreement such sum as the Hon. the Board of Railway Commissioners for Canada shall fix and determine."

In the meantime the 1918 council of the corporation of the city of London, Ontario, passed the following resolution, which governs the local situation at the present time, and puts the onus on the Bell Telephone Company, while conserving the legal status of the city council to collect

The resolution of the 1918 council, of the municipality of London, Ont., is as follows:—

"That the clerk of the corporation of the city of London be, and he is hereby, instructed to notify, in writing, the Bell Telephone Company of Canada, that the corporation of the city of London proposes to charge, and will charge the said company with an annual rental or sum for the use and occupation by the said company of the portions of the highways in the said city of London upon which the poles of the said company are, or shall be erected, and in which the wires or conduits of the said company are, or shall be, carried in the said city of London during the year A.D. 1918; that the said charge for the said poles shall be computed on the basis of 25 cents per month for each portion of a public highway in the said city of London upon which a pole of the said company is, or shall be erected during the said year; and that the said charge for the said wires or conduits of the said company in the said highways in which the wires of the said company are, or shall be carried during the said year shall be 25 cents per month for each 100 lineal feet of conduit containing or capable of containing fifty wires or less, and that in the event of the charges for the portions of the highway occupied by the said poles and by the said wires or conduits not amounting in the said year to the sum of five thousand dollars, the charge shall be the sum of five thousaid dollars; and that the said charges shall be payable half-yearly in advance from the first day of January, A.D. 1918, the first payment to be computed from the first day of January, A.D. 1918, and to be payable immediately after the giving of the said notice, and the next payment to be due and payable on the first day of July, A.D. 1918."

"That in the event of the Bell Telephone Company of Canada not promptly paying the rental charges fixed by resolution of the council of the corporation of the city of London this day the clerk of the corporation of the city of London be, and he is hereby, instructed to notify the said company that legal proceedings will be taken to collect the same."

All permits for erection of poles in London are now passed with the following rider attached, namely: "Without prejudice to any city claim." If all interested municipal councils take similar action, and serve the Bell Telephone Company with official notice of the claim of the municipality to a stated consideration, the Telephone Company will be put on the defensive, and the legal status of the municipality will be retained, until a test case is tried in the courts.

At the present time if a municipality accepts the refusal of the Bell Telephone Company to pay any consideration for a local franchise, the legal status of the municipality goes by default, through consent.

It may be of interest to know that, at the present time, (notwithstanding its Dominion charter claims) the Bell Telephone Company is paying a rental, or assessed tax of 25 cents on every pole it erects in the municipalities of Quebec City, Trois Rivers, P.Q., Hull, P.Q., Sherbrooke, P.Q., etc., etc.

As an example of the loss to municipalities, (and resultant financial gain to the Bell Telephone Company) of arbitrary refusal to recognize its obligations to renew former considerations for local franchise rights, the following Ontario cities have recently lost revenue as shown, namely:—

City of	Chatham, Ont.	$	400	yearly,	now	cancelled.
" "	Galt, Ont.		500	"	"	"
" "	Hamilton, Ont.		4,000	"	"	"
" "	Kingston, Ont.		700	"	"	"
" "	Kitchener, Ont.		800	"	"	"
" "	London, Ont.		4,000	"	"	"
" "	Ottawa, Ont.		12,000	"	"	"
" "	Windsor, Ont.		1,500	"	"	"
" "	Woodstock, Ont.		400	"	"	"

It is respectfully submitted, that every interested municipality will be wise if it endorses the policy of the city council of London, Ont., and each year officially notifies the Bell Telephone Company of the claim of the municipality to a stated financial consideration for its use of land for pole space, or underground conduits for local telephone service, and issues no future permit except it be with rider attached.

"Without prejudice to any legal claim for compensation."

A Dominion charter carries no exemptions from equitable consideration for local franchise rights. The jurisdiction of a Dominion charter appiles only to long distance lines "connecting a local exchange with an exchange outside the limits of the municipality, and does not apply to land, poles, or conduits, for local lines."

---

ANNUAL CONVENTION OF GAS ASSOCIATION

At the eleventh annual convention of the Canadian Gas Association held at the Windsor Hotel, Montreal, last week, the following officers were elected:—President, C. F. Folger, Kingston; first vice-president, V. S. McIntyre, Kitchener; second vice-president, C. S. Begg, Montreal; secretary-treasurer, George W. Allen, Toronto, (re-elected). The executive committee was elected as follows:—A. A. Dion, Ottawa; J. M. H. Young, London (the retiring president); Arthur Hewitt, Toronto; J. S. Norris, Montreal; J. P. King, Stratford, and E. H. Caughell, St. Thomas.

GOVERNMENT TO BUY SALMON PACK

Sir Thomas White, minister of finance, announces that he has arranged with the British authorities to purchase this year's salmon pack of British Columbia. The amount of money required will be eight or nine million dollars, which will be furnished by the Dominion government out of the proceeds of the Victory Loan.

The fact that salmon, owing to its high price, is in the second class of foods, has made it impracticable to obtain shipping for private foreign buying. The arrangement will ensure the purchase of the pack and give stability to its financing by Canadian banks.

The Toronto bank clearings for the current week are $[illegible], compared with $53,782,708 for the same week in 1917, and $4[illegible] in 1916.

ONTARIO MUNICIPAL CONVENTION

Financial, Economic and Social Sides of Municipal Life Discussed in Toronto

That the strictest economy should be practised by municipalities was the contention of Mr. S. H. Kent, city clerk of Hamilton, in his presidential address at the opening session of the Ontario Municipal Association's twentieth annual convention. The convention was held in Toronto on Wednesday, Thursday and Friday, August 28th, 29th and 30th.

"The war has laid heavy burdens on municipalities, and it devolves upon councils to exercise great care in municipal affairs," said Mr. Kent. "Extravagance should be avoided and only works of an urgent character carried out. Those municipalities that now conserve their finances most wisely will later on be able to meet their obligations without imposing heavy burdens on their ratepayers."

Mr. Kent declared it to be his opinion that in passing the regulation prohibiting members of municipal councils from sitting on outside boards or commissions the Ontario legislature had not considered the effect. "It prevents municipalities from having direct representation on boards and commissions directly affecting municipal affairs," he said, "and in my opinion this convention ought to send a request that the amendment to the Municipal Act be repealed at the next sitting of the Ontario legislature."

Mr. Kent urged co-operation with the government in fire prevention work and the greatest economy during war time. On account of high interest rates he recommended that a policy be laid down for the sale of municipal debentures.

The convention opened on Wednesday morning at 9 o'clock, in the city hall. On Tuesday evening, however, a preliminary meeting of the executive committee was held. On Wednesday morning, after registration had been completed and communications read, an address of welcome was read by Mr. T. L. Church, mayor of Toronto.

Municipal Co-operation Urged.

Mayor Church welcomed the delegates most heartily to the city. The present convention of the association was the fifth that had been held under war conditions. He deplored the fact that the municipalities had not united more strongly during the fifth session of parliament in the fight to have clauses inserted in the Railways Act which would give the municipalities control of their own streets. The fight had failed, but he hoped for a united effort on behalf of all the municipalities to secure such clauses in the act at the next session. All Dominion chartered companies should pay toll for the use of the streets. The time has come when the municipalities must stand together against the encroachments of the great corporations. These corporations, such as the Bell Telephone Company, use our streets without being liable to taxation. The Dominion parliament must give us relief from such conditions.

Mr. G. K. Dewey, clerk of Brockville, and first vice-president of the association, replied. Then came the president's address, which was followed by an address by Mr. Samuel Price, chairman of the Workmen's Compensation Board of the Province of Ontario. He described the workings of the act in Ontario, with relation to the municipalities.

Any municipality could insure against any compensation it may have to pay. Such insurance could be placed in any insurance company. During 1917 there were 38 municipalities that paid out compensations, the total amount paid by all the municipalities being $40,000. Eleven of the 173 cases settled by the board with municipalities during 1917 were fatal. During 1917 the board paid out $2,000,000 in compensations.

Mr. Ross, of Sudbury, referring to the housing problem, told of the great difficulties that had been met with in Sudbury with regard to the securing of any security in any shape or form from those desiring houses either to be partly built for them or wholly built for them by the city. It was expected that nearly 800 new houses would be needed in Sudbury during the coming year.

In the afternoon an open forum was held. Mr. D. A. Graham, of Middlesex, brought in a resolution which was referred to the committee on resolutions, to the effect that in view of the general prosperity of the country, especially those centres where munitions were manufactured, the government loan seemed unnecessary, and a pay-as-you-go policy might

AN ALLIANCE FOR LIFE

Many of the large Corporations and Business Houses who bank exclusively with this institution, have done so since their beginning.

Their banking connection is for life—yet the only bonds that bind them to this bank are the ties of service, progressiveness, promptness and sound advice.

236 Branches in Canada, extending from the Atlantic to the Pacific

New York Agency: 63 and 65 Wall Street

Bankers in Great Britain: The London Joint Stock Bank, Limited; The Royal Bank of Scotland

37

be more fitting at the present time, especially as many of the men now at the front would be called upon to bear the burden of the loan.

Secretary B. H. Spence read a communication from the premier of Ontario inviting the delegates to attend the fire prevention conference on Friday afternoon, and the executive recommended that as many of the delegates as possible should attend.

Resolutions Presented.

A number of resolutions dealing with the Ontario Municipal and Assessment Acts and many other phases of civic interest were presented and sent on to the resolutions committee.

A London delegate, in bringing forward a resolution advocating an amendment to the Assessment Act to abolish exemptions of Crown lands and church properties, said that a ballot had been taken on the matter in London, and the vote favoring the abolition of exemptions had been 5,000 to 2.

"I hope that does not represent the number of non-church-goers and church-goers," interjected the chairman.

Another delegate said that churches were buying tracts of land to meet future needs. "They are business institutions, and far-seeing ones at that," he said.

"That doesn't apply to all denominations," said the chairman.

One resolution asked that the association petition the Dominion government to inaugurate a scheme of soldiers' insurance similar to that of the United States, and another asked that power be obtained to increase the statute labor tax to $25 in the case of alien enemies.

On Thursday morning Premier Hearst described the provincial government's plan for assisting the municipalities in providing housing accommodation. "The necessary legislation," he said, "will have to be secured, but in the meantime municipalities can proceed with any scheme they have in mind after it has been first forwarded to, and approved by, the government. The houses are not to exceed $2,500 in cost of construction, and are not to rent for more than $25 per month." Suggestions from municipalities would, he said, be gladly received, and he stated that it was not the desire of the government to dictate to them, but rather to secure their co-operation. The premier referred also to the loss by fire which was incurred annually. Last year there were 3,456 dwellings destroyed in Ontario, at a total loss of over $1,000,000.

Municipal Assessments Discussed.

In addressing the meeting on the subject of municipal assessments, Mr. James Forman, assessment commissioner of Toronto, made a number of recommendations as follows:—

1. Retain the present business tax, with slight changes.
2. Widen the scope of assessment on profits from businesses carried on by persons or partnerships.
3. Assess income from industrial stocks, which is now exempt.
4. Tax or license contractors from outside Ontario who do business in the province.
5. Tax or license transient traders.
6. Remove exemption now enjoyed by private seminaries of learning.
7. Remove exemption on private income of soldiers.
8. Beware of the single tax principle.

MONEY MARKETS

Messrs. Glazebrook & Cronyn, exchange and bond brokers, report the following exchange rates to *The Monetary Times*:—

Cable trans.	4.8505	4.8530	4.88

Rate in New York for sterling demand, 4.75½.

Bank of England rate, 5 per cent.

FIRE PREVENTION AND INSPECTION*

Proper Protection Requires Co-operation of Business and Insurance Men With Fire Department

BY JAMES SMART,

Chief, Fire Department, Calgary, Alta.

We all know that the annual fire loss of the country is enormous, and we all know that the loss is increasing; we also know that the only remedy we can use to reduce this fire loss is the constant application of fire prevention.

We do not know how much has been saved in the different cities where fire prevention and inspection has been carried out by the fire departments. But the fire departments where this work has been carried out (that ranges from the crude but well-meant efforts of the smaller fire departments to the expert technical work of the fire prevention bureaus of the larger cities), know that they have found fire hazards and had them corrected, where, had they been neglected, would undoubtedly have caused fires that would have resulted in a heavy loss of property, and possibly the loss of life, and I dare say that there is not a fire chief that cannot bring to mind at least one fire that would have been considered nothing compared to the hours of work, expense, and loss of property that had to be endured in the extinguishing of the fires.

Fire prevention goes hand in hand with building inspection, and the firemen to fight a fire to advantage, must know the buildings in their districts, the construction of them, the entrances, and the points at which a fire can be fought to the best advantage, and the only way they gain these details is by the inspection of buildings at frequent intervals and while doing this work it will only require a little more time to include fire prevention work making a report of the existing fire hazards, also conditions that might become fire hazards, and giving orders for their immediate correction, and the following up of the same to see that they have been corrected.

The value of this inspection work by firemen first came to my notice a few years ago. At that time men were detailed to go through the different buildings, looking for fire traps and hazards that would be dangerous to the men in fighting a fire, also to become familiar with the ins and outs of the building, and while we have had dangerous fires start, and under dangerous conditions, we have controlled them with small loss on account of the men being familiar with the building in which the fire originated: and while the conditions were bad at the start, and we had fire hazards as dangerous as you will find them, yet by the constant work of the firemen, the help of the different city officials, and the co-operation of the business men, we have the city in such shape that we are complimented by the travelling public, and by the insurance inspectors who visit our city, and the citizens should figure that the advertising we receive from this source alone more than pays maintenance of the fire department, besides the satisfaction that we have a clean city. We have the saving of insurance that comes not only to the owner of the building but to the tenant as well.

In conclusion I would draw your attention to the fact that a very large percentage of the fires start in basements. These fires are largely caused, or made more disastrous, by disorderly condition—that is, the accumulation of excelsior, paper, packing boxes, and general rubbish. The task of extinguishing such fires is made difficult, and sometimes impossible by failure to prevent suitable passage-ways for the firemen.

Essential Precautions.

1st. Keep no rubbish, excelsior, paper or other inflammable material in the basement.

2nd. Keep the merchandise neatly piled up.

3rd. Allow reasonable passage-ways for the firemen.

4th. See that the smoke and heat pipes, chimneys and furnaces are in good condition.

5th. Keep no inflammable fluids except in fireproof rooms.

6th. Make your janitor responsible for conditions.

Observance of these precautions will, no doubt, give good results.

---

WINNING TRUST COMPANY SUCCESS IN CANADA

An Address Delivered Before the Financial Advertisers' Association Convention in San Francisco

BY T. H. YULL,

Advertising Consultant, Canada Trust Company London, Ont.

Are the business men of your town or any town thoroughly alive to the advantages of trust company service? Do the farmers in the surrounding country know that trust companies, acting as executors, will safely invest their surplus funds and protect and impartially distribute the property they leave at low cost? Do your citizens, in general, know that to engage a trust company for the care of an estate or for the investment of money is to engage a widely experienced servant that never dies, is never absent, will not defalcate, that is ever present, capable and trustworthy, responsible and inexpensive.

Speaking largely, the people in general do not know these facts. There is only one way in which they can become acquainted with them, and that is by well planned and well executed advertising.

Roughly, and for our purpose, advertising may be divided into two classes—general publicity, by which I mean newspapers, magazines, posters, street car cards and other mediums, and direct-by-mail, which includes form letters, folders, circulars, broadsides, novelties, etc. By using either of these methods alone, a certain degree of success may be attained, but it is only when they are used in conjunction, intelligently and persistently, that any concern may hope to approach 100 per cent. efficiency.

Guaranteed Investment Department.

In Canada, the larger trust companies, in addition to the usual trust departments, have a guaranteed investment department. This department receives money for investment, and repayment is guaranteed at the end of a stated term with interest at a fixed rate payable half-yearly. This department gives wide scope for good advertising and brings the company into touch with many people of means. When such a person intrusts the company with funds for investment, he or she becomes a prospect for the estate department. A person leaving money in the care of a trust company to be invested will assuredly be willing to leave his or her affairs in the same hands. The funds of this department are largely invested in farm mortgage security, and it can easily be realized that incalculable aid is rendered the nation in its efforts for greater food production by the bringing together of the farmer who wants to borrow and the moneyed person who wants to lend. The trust companies of Canada have over $40,000,000 borrowed in this way, the great bulk of which has been loaned out on first-class farm mortgage security.

Coming back to our advertising—since 1914 the guaranteed investment department of the Canada Trust Company has shown an increase of 220 per cent. We attribute this mainly to staff co-operation and direct-by-mail advertising. These splendid results achieved in a period that began with the war, have proved to us beyond all question the necessity of thoroughly educating the prospect. From the beginning of this campaign the officers of the company felt that direct-by-mail advertising was the best method of conducting the necessary education of the public, and, as the results began to show, the direct-by-mail method was quickly applied to other departments with correspondingly good results.

We used three forms of approach—folders, booklets and letters. It was realized that some different and greater force than that possessed by the average booklet or letter must be used to produce results in the minds of the class of prospect we had to work upon, and to produce results of the nature we were after.

A series of well-written, well printed folders containing a facsimile reproduction of the bond and coupons was prepared. In passing I might say that it has been abundantly proven that the main reason for the unusual success of these folders was that we showed facsimiles of the bond and coupon. As a matter of fact we have consistently tried to embody in our advertising matter the sound merchandizing and advertising maxim of Arthur Brisbane, "A good picture is worth a million words." A good many prospects actually came into our offices holding in their hands the identical folders or letters that we had mailed them.

It is trite to say that 80 per cent. of goods are sold through the eye. Financial advertising is among the hardest, perhaps, the hardest, to illustrate pertinently, but the financial prospect is just as susceptible to the pulling power of a "right" illustration as the purchaser of a piano, a cake of soap, a typewriter or an automobile.

Mailing List Must be Kept Alive.

The first and most vital step in any direct-by-mail campaign is the compiling of the mailing list. In Canada, postmasters must display in their offices the lists of rural boxholders they serve, and by carefully culling the names of non-prospects, a first-class mailing list of good farmers in any district may soon be compiled. Keeping the mailing list up-to-date is only secondary in importance to the work of compiling. The cost in time and money is only a fraction of the amount that can be wasted and worse than wasted by a periodical canvass of "dead" names.

You have and I have had the experience of receiving two and sometimes three pieces of mailing matter on the same day from the same house identical in character. A glaring instance of this happened me only the other day, when I received from a publishing house a circular calling attention to the forthcoming number of the ...... magazine. One was addressed to my office, one was addressed to my house, one was addressed to my club, and one to my firm for "Attention, T. H. Yull." I might as well remark here that every one of these bore a three-cent stamp. You or I would not consider this indicative of great business acumen on the part of this firm, or even ordinary care, and if such a concern were asking us to invest with them we would not be encouraged to do so by the evident laxness such methods indicate.

Supposing you have a mailing list to-day, and you go at it with a pruning knife mercilessly. Suppose you cut off 1,000 worthless names, then for every piece of advertising matter you have been sending to that list, you are going to save 1,000 copies, 1,000 clips or fasteners, 1,000 envelopes if you use an envelope, 1,000 less for your staff to handle, and 1,000 less postage stamps of the denomination required. So if you are now sending out only 1,000 too many, you are incurring a loss that will mean a considerable sum by the end of a year. Even more serious that this monetary loss, is the undoubted loss of prestige that comes from sending two or three circulars to the same prospect at each mailing, and continuing to mail your literature to a deceased person.

In compiling a good mailing list for towns or cities you have on your hands a problem that will call for the best brains and most painstaking effort you are able to command. Changes of address are more frequent and necessitate closer checking up if you are going to keep your lists "alive," but, although the work of building good city lists means time, work and care, the results will amply justify the pains taken.

Where shortage of help in your advertising department prevents adequate checking of your city lists, you will get infinitely more satisfactory results from a small list of carefully selected names. We have found that it pays to employ the latest mechanical equipment for mailing, and where speed is an essential, modern mailing machinery is indispensable.

Advertising Efforts Might be Pooled.

In most trust companies the advertising of the estates department is still in its early stages. A slow and laborious process of education is under way, that of enlightening the masses of the people to the advantages of corporate executorship. When judged by actual cash results, such advertising seems tremendously costly. Practically every trust company of any consequence is engaged in this herculean effort single-handed. That is, each company is conducting its own educational campaign of advertising, although the basic facts are the same in every case and the statements made in the advertising are identical in substance and differ only in the phraseology.

I believe that to secure the best possible results from estate department advertising expenditure, the small local individual educative campaigns now being waged by this and other trust companies should be merged into one great compelling nation-wide effort.

You and I to-day are using and enjoying certain foods, certain materials, certain service and other things simply because the dozens or hundreds of purveyors of those foods, materials or services undertook a collective campaign of advertising to convince and convert us to the advantages consequent upon the use of their joint product.

Among co-operative campaigns that have been successful are those conducted by fishery corporations, the city of Phila-

delphia, the lumber interests, southern shrimp packers, the wall paper industry, gas companies, photographers, national florists, united bakers, dress manufacturers, national dairy council, Kitchener, Ont (manufacturers), prune and apricot growers, southern California, stock exchanges, the city of Dayton, Ohio, red cedar shingle manufacturers, stock breeding associations, Arkansas pine interests, coal companies, united jewelers (incorporated), railroads, dental specialty manufacturers, paving companies, fire underwriters, milk producers, cement manufacturers, wooden barrel manufacturers, Canadian apples, safe deposit companies.

Co-operation of trust companies along similar lines would dispel the doubt and ignorance now pervading the minds of the general public on the subject of estates management and would inevitably go far towards ending the ancient and dishonoured custom of selecting individuals as executors.

Scope for Extension in Canada.

In spite of the handicaps just mentioned, a good volume of estate business is secured by the more progressive trust companies in Canada. The larger proportion of this business comes from the wealthier classes of the larger cities. During the past two years every Canadian trust company, apart from two very small institutions, recorded a substantial increase of business in this department.

Before closing I would like to say a very few words of appreciation of the benefits of membership in the Financial Advertisers' Association. The service features of the association have been a welcome source of inspiration and help. By reading the monthly "Bulletin," and the timely articles found in every issue, any member is kept constantly in touch with the most modern ideas and latest developments in the world of financial advertising. The number of Canadian houses on the membership list is increasing, and I hope that it will not be long before the majority of trust companies and other financial institutions in Canada will profit by membership in the association and obtain the full benefit of its effort to the advantage of the fraternity as a whole.

BUYING POWER HAS BEEN COMBINED

The Canada Food Board says: When Mr. Herbert Hoover addressed the Consumers' Council recently at the offices of the British Ministry of Food in London, England, he pointed out that competition amongst the allied countries in purchasing food supplies on this continent had been arrested. Such competition was responsible in no small measure for the rapid advance of food prices in Canada and the United States, and prices would certainly have gone much higher had it not been for the combined aciton of the British Ministry of Food, the United States Food Administration and the Canada Food Board in grappling with the problem and so organizing the purchasing of food supplies for oversea as to eliminate competition amongst the allied buyers. In bringing about such organization the Canada Food Board had an important part.

But while there no longer is unrestrained competition in purchases of food supplies for oversea, the cost of production of agricultural produce of all kinds is very high, and this accounts, in large measure at least, for the high prices which have been rendered necessary in order to maintain and to increase production under adverse war conditions. The most important question of all is that of stimulating production, and any possibility of reduction of supplies must not be entertained because of the huge requirements oversea, the dependence of the Allies upon North America for so large a proportion of their food, and the military and economic importance of building up large reserves, both here and abroad.

As Mr. Hoover has said, discontent over prices is a trifle compared with discontent over hunger, which might have been our lot except for the Providence which placed us on this side of the Atlantic. The Canada Food Board, by its license control over dealers in food and by regulations affecting all handlers of foodstuffs, has already done much to eliminate profiteering from the wholesale trade and to check trade practices which have been to the disadvantage of both the producer and the consumer. The Food Board asks the people of Canada to lend their support to the effort the board is making to keep prices to as low a level as is consistent with the obligation of supplying the food needed by our Allies. This can best be done by an intelligent study of the food problem in all its phases.

ST. LAWRENCE POWER DEVELOPMENT

The application of the St. Lawrence River Power Development Company for permission to construct a dam across the south channel of the St. Lawrence River, near Massena, N.Y., will be heard by the International Joint Commission in Montreal on August 29th. The commission recently sat in Atlantic City, where the plans were discussed. The application is being opposed by the Dominion government through its counsel, Mr. F. H. Keefer, and by the Commission of Conservation through Mr. A. V. White, of Toronto. Mr. George W. Koonce, representing the United States War Department, argued that the application should be gone on with immediately.

Mr. Koonce, in pressing the immediate hearing of the application, submitted letters from the chairman of the United States War Industries Board, and the Director of Aircraft Production of the United States supporting it. In the letters it was claimed that the construction of the dam would permit the Aluminum Company of America, with a plant at Massena, N.Y., to increase its output of aluminum. It was admitted that the supply of aluminum was at present equal to the demand, but the latter, it was stated, was likely to increase. It was argued that the construction of the dam would constitute no disadvantage to Canadian navigation.

Mr. Keefer asked for further delay in order to acquaint himself with what was involved in the application. It is understood that the application is being opposed by the Dominion on the ground that the construction of such a dam would interfere with navigation on the Canadian side of the river. It would also be granting to a private company the right to develop waterpowers which the government might itself later on wish to develop for the benefit of the community at large.

The St. Lawrence River Power Company was represented by Leighton McCarthy, of Toronto; Henry Holgate, engineer, of Montreal, and Arthur V. Davis, of Pittsburg. Francis King, K.C., of Kingston, appeared for the Dominion Marine Association.

EARNINGS OF CANADIAN RAILWAYS

The August Letter of the Canadian Bank of Commerce says:—

Owing to rate advances the aggregate railway earnings of the three chief systems for the first half of the current year exceed those of any previous corresponding period. The tonnage carried has been practically the same as last year. At present the amount of freight offering is equal to the capacity of the existing facilities. While the additional advance of 20 per cent. which comes into effect on August 12th will for the next half-year ensure earnings sufficient to cover the advanced costs of operation, the volume of tonnage may be less as a result of the decreased cereal production in the west. To some extent this decline in tonnage may be offset by the increased business to be obtained from busy industrial centres where complaints as to lack of facilities are still made, attributable in part to the subjection of ordinary to war requirements.

Since the beginning of 1915, the cost of operating the railroads has steadily advanced and has absorbed a correspondingly larger proportion of the earnings. Not until the winter of last year was an appreciable advance in rates put into effect, and since that time extraordinary advances in wages have been granted, necessitating a further increase in rates. In the record of monthly gross earnings given in the chart enclosed, it is to be remembered that the rates are the same as those prevailing before the war with the exception of those for the closing month of 1917 and for the first half of the current year. It is quite evident that serious as were the difficulties caused by the high price and scarcity of labor, materials and rolling stock, transportation companies have been able to increase the transportation service they give to the country, although they were not permitted until quite recently to increase their charges at all in proportion to the increased cost of operation.

The temporary by-law of Burnaby, B.C., which provides for a loan of $180,000 to take care of the current half-year's expenses has been passed and is now in effect. This loan is given on the security of the year's taxes.

Who Will Inherit?

The laws of succession become operative when an estate is left intestate. To make certain that your estate is distributed accerding to your wishes it is necessrry to make the provisions in an accurately drawn up will. The time to make your Will is NOW. In appointing an executor, let us suggest the experience and reliability of this Corporation as evidenced by its 36 years of successful service and satisfaction. The charges are no more than the courts allow a private executor.

Pleased to confer with any who are interested in fuller information.

Bank Deposits Continue to Grow

July Bank Statement Shows Greatest Increase in Savings Deposits in Ten Months—Requirements of Business Increase Volume of Current Loans—Circulation is Now Near Two Hundred Million Mark—Contraction in Foreign Business Indicates Home Demand and Preparation for War Loan

	July, 1917.	June, 1918.	July, 1918.	Year's inc. or dec.	Month's inc. or dec.
Deposits on demand	$450,849,356	$549,327,078	$549,068,651	+ 22.0	— .04
Deposits after notice	929,442,340	965,934,556	992,015,137	+ 6.7	+ 2.8
Current loans in Canada	829,560,700	897,226,012	905,677,233	+ 9.1	+ .9
Current loans elsewhere	90,253,882	103,033,289	99,702,919	+ 10.0	— 3.9
Loans to municipalities	43,989,207	58,000,424	56,589,173	+ 30.2	— 3.4
Call loans in Canada	71,376,788	76,970,920	74,382,762	+ 4.2	— 2.6
Call loans elsewhere	151,875,676	170,034,476	167,112,836	+ 10.6	— 1.8
Circulation	161,762,871	195,135,577	198,779,395	+ 2.5	+ 1.5

The above are the more important changes indicated by the Canadian bank statement for July, 1918. As compared with the previous month, substantial increases have taken place in savings deposits and circulation, and also in current loans in Canada. Demand deposits are practically stationary, but the other figures show increases. Bank circulation, while varying considerably from season to season, has increased steadily since the beginning of the war, as the result of business demands and high prices.

The following table gives record of deposits for the past thirteen months:—

	Deposits payable on demand.	Deposits payable after notice.
1917—July	$450,849,356	$929,442,340
August	443,317,275	806,774,687
September	451,749,532	965,393,541
October	495,058,449	985,790,850
November	538,869,362	1,008,657,874
December	569,441,871	995,978,013
1918—January	559,777,237	900,314,256
February	565,266,642	908,822,988
March	561,042,236	921,080,803
April	558,509,221	933,644,668
May	535,655,731	947,757,337
June	549,327,078	965,934,556
July	549,068,651	992,015,137

The month of November, 1917, saw a record for savings deposits in Canada, and apparently this record will be surpassed at the end of the month of August of the present year. As it will be several months before payment will be made on the next war loan, a large increase may yet be made. Demand deposits are practically the same.

The course of the deposits account during the past six years is shown in the following table:—

June.	On demand.	After notice.	Total.
1913	$356,585,196	$621,347,388	$ 977,932,583
1914	346,854,051	671,214,125	1,018,068,176
1915	340,950,215	691,731,719	1,032,681,934
1916	441,058,188	780,263,919	1,221,322,107
1917	450,849,356	929,442,340	1,380,291,696
1918	549,068,651	992,015,137	1,551,083,788

When the figures for the past six years are compared, therefore, the rapid growth of deposits of Canadian banks is apparent. In the case of the demand deposits the increase has been steady while in the notice deposits it has been especially rapid during the past three years.

The trend of the Canadian loans account for the past thirteen months is shown in the following table:—

Loans.	Current in Canada.	Call in Canada.
1917—July	$829,560,700	$71,376,788
August	836,420,670	71,204,351
September	855,306,953	72,421,187
October	883,086,860	71,653,719
November	$868,973,714	$72,178,345
December	858,533,298	71,779,020
1918—January	855,506,506	76,239,201
February	859,363,147	76,722,163
March	886,995,222	74,257,877
April	884,089,402	77,497,360
May	894,817,113	78,466,582
June	897,226,012	76,970,920
July	905,677,233	74,382,762

Call loans continue to contract, because business which makes use of money in this form is not large, and will no doubt contract still further during the year. Current loans record a new high level.

The following table shows the call loans abroad in July as compared with previous returns:—

	1915.	1916.	1917.	1918.
January	$ 85,796,641	$134,248,552	$155,747,476	$132,687,066
February	89,890,982	139,138,651	162,344,556	160,239,494
March	101,938,685	141,889,989	161,616,735	167,296,701
April	121,522,971	147,146,443	159,156,054	179,818,531
May	136,098,835	163,400,659	168,692,675	172,259,879
June	124,604,875	182,757,015	159,309,133	170,034,476
July	117,821,174	177,121,733	151,875,676	167,112,836
August	120,607,677	171,380,353	176,610,625	....
September	135,108,412	173,877,586	166,480,004	....
October	120,681,624	189,346,216	151,018,747	....
November	135,530,562	183,250,389	139,832,552	....
December	137,157,869	173,878,134	134,483,482	....

It is evident that the contraction in this field of the banking business is to some extent due to the desire to conserve funds for home use. At the same time a large decline is not probable due to the desire of Canadian banks to retain a considerable reserve which is promptly available, and which yields some interest return. Current loans abroad, which decreased by almost 4 per cent., give a better indication of the tendency.

The following table shows the course of the principal loan accounts during recent years:—

July.	Current loans in Canada.	Current loans elsewhere.	Call loans in Canada.	Call loans elsewhere.
1913	$858,420,069	$42,960,513	$67,991,255	$ 89,266,235
1914	840,198,625	48,013,052	68,441,816	125,545,287
1915	758,340,517	41,784,633	71,168,233	117,821,174
1916	740,040,741	62,356,259	87,355,648	176,121,733
1917	829,560,700	90,253,882	71,376,788	151,875,676
1918	905,677,233	99,702,919	74,382,762	167,112,836

Current loans, it is noted, easily set a high record both at home and abroad, and together total over one billion dollars. Call loans at home have been stable during the past six years, and those abroad increased during 1914, 1915, and 1916.

Of the deposit in Central Gold Reserves $13 210,000 is in gold coin: the balance is in Dominion Notes

TRUST COMPANY TO DEAL IN BONDS

The British American Trust Company, with offices in Victoria and Vancouver, have opened a special department to deal in government, municipal and corporation bonds. The company is in a position to purchase full issue of either government or municipal securities. They, in turn, will market such securities with their clients locally and in eastern Canada and United States.

This company was incorporated in 1901, and has been transacting a general trust business for the past seventeen years, being one of the first trust companies opening for such business in the province. The present board of directors is comprised of the following well known financial and business men: Messrs A. C. Flumerfelt, H. N. Galer, F. L. Beecher, Hugh Davidson, Arthur E. Haynes and E. J. Leveson.

The head office of the company is in Vancouver, and is under the management of Mr. Homer N. Galer. The Victoria office is under the management of Mr. Arthur E. Haynes. Mr. John Grieve, formerly of Pemberton and Son, is in charge of the bond department.

The district of North Vancouver has decided to sell 10 per cent. of the lands acquired by the corporation through process of tax sale, and the clerk is making arrangements accordingly. The sale will be held some time in September, and about a thousand parcels of land will be offered by the collector in private sale.

Dominion Government---July, 1918

LIABILITIES

Loans from other banks in Canada secured, including bills re-discounted	Deposits made by and balances due to other banks in Canada	Due to banks and banking correspondents in the United Kingdom	Due to banks and banking correspondents elsewhere than in Canada or the U.K.	Bills payable	Acceptances under letters of credit	Liabilities not included under foregoing heads	Balances due to the Imperial Government	Total Liabilities	Aggregate amount of loans to directors, and firms of which they are partners	Average amount of current gold and subsidiary coin held during the month	Average amount of Dominion Notes held during the month	Greatest amount of notes in circulation at any time during the month

T. C. BOVILLE, *Deputy Minister of Finance.*

SHIPBUILDING IN BRITISH COLUMBIA

Plenty of new business in the shipbuilding line seems to be assured for the British Columbia shipyards. It has been stated that the Foundation Company will receive a contract for twenty additional ships from the government of France, and in order to handle the work has asked for an extension of its shipbuilding site.

The Hon. John Hart, finance minister of the province, who was recently in New York, interviewed Mr. Remington, president of the Foundation Company. Mr. Remington stated that it was the intention of the company to build the ships required in the new contract in the Victoria yard, and also in the Cameron-Genoa yard adjoining. The company had an option on the latter property which expired on the 16th instant, and requested that it be extended until the 20th. The provincial government will do everything possible to encourage the business.

By unanimous vote Windsor aldermen, on August 19th, rejected a request by the Sandwich, Windsor and Amherstburg Street Railway that their property, which is exempted from taxation, be relieved of assessment for patriotic purposes.

The World Marine and General Insurance Company, Limited, has been licensed to transact in British Columbia the business of marine insurance. The head office of the company in the province is in Victoria, and B. C. Mess, insurance agent, Victoria, is attorney for the company.

MUNICIPAL BOND MARKET

The Monetary Times Weekly Register of Municipal Activities and Financing

Edmonton, Alta.—A block of $21,2[illegible] 7 per cent. [illegible]-year serial [illegible] debentures has been awarded to Messrs. W. Ross Alger and Company, of Edmonton, Alta.

Parkland, Alta.—Messrs. W. Ross, Alger and Company, of Edmonton, Alta., have been awarded $25,000 7 per cent. 40-year serial consolidated school district debentures.

Forestburg, Alta.—Messrs. W. Ross, Alger and Company, of Edmonton, Alta., have purchased $25,[illegible] 7 per cent. 40-year serial consolidated school district debentures.

Sedgewick, Alta.—A block of $7,[illegible] 6 per cent. 10-year serial debentures has been awarded to Messrs. W. Ross, Alger and Company, of Edmonton, Alta. The proceeds will be used for fire equipment.

St. Thomas, Ont.—City Treasurer Perry informs *The Monetary Times* that two blocks of bonds, totaling $54,407, and bearing interest at the rate of 6 per cent., payable half-yearly, have been sold locally. One block of $44,000 is for patriotic purposes and the other block of $10,407 is for local improvements. The issue is payable in ten annual instalments.

Yarmouth, N.S.—Mr. J. H. Malcom, manager of the Bank of Nova Scotia, Yarmouth, has been awarded $54,000 6 per cent. 15-year refunding debentures. The price paid was [illegible]. Other bids received were from three Halifax companies. The Eastern Securities Company bid 97.22, the Sterling Securities, Limited, 97.63, and W. F. Mahon and Company 95.798.

South Vancouver, B.C.—The response to the tax levy of the municipality, on which the rebate expires on August 31st, has been very satisfactory to Commissioner Gillespie. Up to August 17th, this year, the receipts for taxes have been $73,[illegible], while the same period in 1917 shows only $47,[illegible]21. This increase in receipts for taxes, plus the increase in the water collections this year up to August 17th, will amount to approximately $3[illegible],000 over that of a similar period last year.

Alberta.—Messrs. W. Ross, Alger and Company, of Edmonton, have been awarded four blocks of consolidated school district debentures as follows:—

Lousana S.D., No. [illegible], $2,000 7 per cent. 2[illegible]-year serials; Janet S.D., No. [illegible], $2,[illegible] 7 per cent. 1[illegible]-year serials; Hughenden S.D., No. 2,265, $2,[illegible] 7 per cent. 2[illegible]-year serials; Bow Island S.D., No. 1,[illegible], $6,000 7 per cent. 2[illegible]-year serials.

The above school district issues are for the purpose of the building and equipping of schools.

BRITISH COLUMBIA MUNICIPAL ACT REVISION

Reeve Bridgman, of North Vancouver, president of the British Columbia Union of Municipalities, was in Victoria recently conferring with Mr. F. A. McDiarmid, who, in association with Municipal Inspector Baird, is busy revising the British Columbia Municipal Act. It was expected that a draft of the act as revised will be placed before the union at its forthcoming annual meeting next month. That was the promise Attorney-General Farris made to the union at the last session of the legislature, when it was declared that in view of the government's promise to arrange for a complete revision of the act certain proposed amendments thereto which it was intended would be laid before the legislature should be withdrawn and the whole act gone into later, and the resultant draft, after being passed upon by the union, should be submitted to the legislature at next year's session.

The reviser is proceeding, but there are a number of matters of policy which have yet to be considered by the government, and as the time is drawing near for the union's meeting it looks as though the amended draft will not be ready, and that all the union will have before it will be a number of principles which will be discussed and the union's attitude thereon expressed.

WINNIPEG FINANCES DISCUSSED

Local Organization Makes Many Valuable Recommendations on Municipal Finance in General

Bulletin No. 13 of the Citizens Research League of Winnipeg, Manitoba, is entitled "Findings and Recommendations of Your Outside Auditors." This year the city's accounts were audited by a firm of accountants, Henderson, Reid and Company, who made certain recommendations regarding the management of the city's affairs. This, it may be mentioned, was the first independent audit which had taken place since the year 1908. The following recommendations were made:—

1. That the departments of the comptroller and treasurer be merged into one finance department under one responsible head.
2. That an efficient and independent internal audit department be organized, responsible direct to the city council.
3. That a periodical outside audit be instituted.
4. That duplication of detail work in financial administration and accounting be eliminated and modern labor-saving office methods be adopted.

After quoting these recommendations the Research League points out certain ways in which these requirements would be beneficial to the city business. Among the points which the auditors criticized was the omission of over $100,000 of unpaid current accounts for the city's liabilities at the close of the fiscal year; carrying forward as assets certain expense accounts and balances which the auditors claim are not more admissible for assets than salaries paid to staff; carrying as assets long overdue tax arrears $100,000, of which the auditors estimated was extremely doubtful of collection; statement that a general revenue account has a surplus of $178,940, whereas the auditors claim there is a deficit of $77,217. There were certain other items criticized by the auditors which were remedied before the comptrollers' report was published. The research league, however, points to the above as being still in evidence and maintains that prompt action is desirable in order that there may be no grounds for criticism of the city's finances.

Regarding the merging of the departments of the comptroller and treasurer, the "Bulletin" says:—

"Much duplication of work is reported as having resulted from the overlapping existence of these two departments. The creation of a new office is suggested, that of chief financial officer, under some such title, perhaps as that of treasurer and commissioner of finance—the name used in Toronto, where the recent appointment of such an official has already resulted in substantial improvement in the financial administration of that city. Such an official would have control over and be responsible for all the municipal accounts, though the accountants of each of the main civic department (general, hydro-electric and waterworks) would necessarily be charged with the handling of detail."

Regarding the internal audit conducted by the comptroller's department, it is pointed out that this is lacking in effectiveness, which may be due to the fact that the internal auditors have not an independent status, and are in constant association with those whose accounts they audit, an independent internal audit department should be created, says the league, the head of which should be directly responsible to the council and not subject to the control of any officials whose records are under audit. In addition to this internal audit, which would check all details, an external audit might be maintained to test the general lines of administration.

VANCOUVER LOOKING TO ORIENT

If Canadian trade with Japan, China and Russia increases, as is expected in many quarters, the city of Vancouver should benefit greatly. Geographically, it is the nearest city on the American continent to the east, and should, therefore, become a point of shipment. That the effects are already being experienced is illustrated by the fact that every liner leaving Victoria for the Orient carries a full list of passengers, 75 per cent. of whom are Canadian and United States business men. Reservations have been made on ships well into the new year. Vancouver is nearer Japan and China than any other city in the British Empire.

WAGER POLICIES

Case Where Life is Insured in Favor of Disinterested Party, Who Also Pays Premiums, Held to be Invalid

BY M. L. HAYWARD, B.C.L.

The case of Brophy vs. the North American Life Insurance Company decided by the Supreme Court of Canada is an important one on the point of wager policies and the right of the parties to recover premiums paid under such policies.

In this case one Cromar, an insurance broker, had been doing some business for the plaintiff, Brophy, and had insured his (Brophy's) life in the New York Life Insurance Company.

Then Brophy stated that he had some more money to put in life insurance and Cromar suggested that it might be better "to have a younger life," and that the policy be placed on his (Cromar's) life instead of Brophy's.

Acting on this suggestion, Brophy took out an annuity of $300 per year in the North American, and Cromar took out a policy for $6,000 in the same company payable to his (Cromar's) estate, so that the $300 annuity payable to Brophy would pay the premiums on the $6,000 policy on Cromar's life.

This was in March, 1886, and in 1897 Cromar assigned the $6,000 policy to Brophy. From the date of the policy down to the time of Cromar's death in 1900 Brophy paid the premiums on the policy out of his annuity.

The company then brought an action to have the policy cancelled and Brophy counterclaimed against them for the amount of the premiums which he had paid.

On the point that the policy in question was a "wagering policy" and void, the court decided in favor of the company in the following words:—

"Here, however, it is plain, by uncontroverted evidence, that the arrangement between the appellant and Cromar was that he, the appellant, who had no interest in Cromar's life, should insure it for his own benefit, he, the appellant, paying the premiums. That it is consequently a wagering policy, immoral in its nature and tendency, and void, as found by the two courts below, is not, in my mind, susceptible of doubt. The evidence satisfies me that this transaction was only a part of a wide scheme between the appellant and Cromar to engage in the wholesale business of speculating on wagering insurances."

Then, this policy being held null and void, the question was whether Brophy was entitled to a return of the premiums, and the court held that he was not for the following reasons:—

"But where a policy is cancelled upon the ground that it covers a wagering contract (especially without any guilty participation by the company, as found in this case by the two provincial courts), a distinction should be made, in my opinion, and the company, in such a case, should not be ordered to return the premiums. An insurance company is then acting in the public interest, as well as in its own. It is as against public policy that such an instrument is void, and in their endeavors to put a stop to acts which the law reprobates it is a duty to the public that the company performs. It is an offence against the state, a fraud against the law, that they ask the court to punish by the cancellation of all the claims that the offender might otherwise have against them. They are allowed to waive all the rights that fraud or misrepresentation by the insured would have entitled them to, but the law denies them the right to waive the nullities that it has enacted for the common weal. A court of equity should, therefore, in such a case, relax its general rule and consider it superseded, by refraining from imposing upon a relief which the public interest requires a condition which might have the effect of hindering and impeding a company in the performance of their duty to the state.

"An interference, in the name of equity, to alleviate the offender's punishment by ordering the return of the premiums into his guilty hands would seem to me an inconsistency. The insured is not in a position to ask the assistance of the court, nor to invoke rules of equity, the sole effect of which would be then to benefit the sole culprit. He has received no consideration from the company for the moneys he has paid, it is true, but he owes his loss to his own turpitude, and the court should have no pity upon him and no mercy for him, under any circumstances. I would apply to him the rule that he who has committed iniquity cannot claim equity.

"Under these circumstances, in expounding the law for this Dominion, this court should, in my opinion, determine that an insurance company is not bound to tender before action, or to deposit in court, the premiums they have received on a policy the cancellation of which is asked upon the ground of its being a wagering contract and void as against public interest and the positive enactments of the statute.

"Here, however, the money in question was the company's money, validly received by it in consideration of a policy lawfully issued and renewed by it. It was money held by the company, for the purposes of the company—for the benefit and security of and in trust for its shareholders and policyholders. It would, under such circumstances, have been a breach of trust upon the part of the company's executive had they made a present of it to Brophy, or to any one else. How can a court of justice order the violation of that trust by decreeing a refund?"

The above case, however, should be compared with the case of North American Life Assurance Company vs. Craigen, also decided by the Supreme Court of Canada, where one Russell insured his life with the company and had the policy made payable to a third party who was not related to him and who had no insurable interest in his life. In fact the insurance was placed without the knowledge of the beneficiary.

Russell paid the premiums himself, and the decision of the court was that the policy was not a wagering one and was valid and binding on the company.

"There is no pretence," said Ritchie, Chief Justice, "for saying that Russell did not insure his own life and pay the premium with his own money, making the loss payable on his death to Elizabeth J. Craigen, without her knowledge. I am clearly of opinion that he had a perfect right to insure his own life; that his interest supports the policy, and that the policy was not, in any sense of the term, a wager policy. It was obtained, and the premium paid, by a person who unquestionably had an interest in his own life, and was not obtained by the party now claiming the money, but was obtained without collusion with, or even the knowledge of, the party whom the assured designated to receive the amount upon his death.

Valid when Insurer Pays Premiums.

"It is quite another matter where an evasion of the statute is attempted by a person procuring one in whose life he has no legal interest to insure it with his money and for his benefit, though ostensibly for the advantage of the party insuring. In this case, as I have said, there was no attempt to evade the statute. Russell applied for the insurance on his own life, paid the premium out of his own money, and the company, with full knowledge of all the circumstances, issued to him a policy; the contract thus made with Russell not having the semblance of a wager policy, but being made in good faith, what possible objection, in law or in principle, can there be to his requiring the amount, in case of his death, to be paid, not to his personal representatives, but to a specific person whom he designates to receive the same? The loss could not be paid to Russell himself because it is not payable until he is dead and gone. What is there to justify the principle that the statement in the policy of the name of the person to whom he wishes the money to be paid on his death vitiates the policy? What rule or principle of law is invaded by the parties, by mutual agreement, designating who shall be entitled to receive the proceeds when due instead of the personal representatives of the deceased? He could assign the policy; he could bequeath the policy; and I have yet to learn that he could not make it payable to trustees for the benefit of particular individuals. If he could, why could he not make it payable to the assignee, devisee or individual himself or herself?"

The Commercial Union Agency in the Bower building, Vancouver, under the management of Mr. W. A. Ross, manager of the agency of the Canada Accident Company, has now the entire group of Commercial Union companies under one roof being the Commercial Union of London, the parent and holding company; the Commercial Union of New York, the Palatine Insurance Company, the California Insurance Company and the Canada Accident Company.

FEDERAL RESERVE SYSTEM A GREAT ASSET

Banking System Has Had Much To Do With Creating Financial Leadership of the United States

That nothing but mismanagement could wrest the financial premiership of the world from the United States is the contention of Mr. Paul Warburg, who has just resigned his seat on the Federal Reserve Board. His resignation is stated to be entirely voluntary. Mr. Warburg was born in Germany, and did not wish to embarrass the United States government in any way by remaining on the board. Two of his brothers still reside in Germany, one of them being financial adviser to the German government.

In an interview with the New York Times Mr. Warburg said:—

"The Federal Reserve system has been, as everyone knows, uniformly successful. I may say it has exceeded my best expectations. It is a profound satisfaction to all of us to know that never before was this country financially as strong and as we [illegible] old holdings have been increased and concentrated, and we have improved our position as against other nations by repurchasing our own securities and by making foreign loans in unprecedented amounts. The Federal Reserve system has organized this enormous strength, and it thus becomes our chief line of financial defence. At present it appears impregnable.

"We have brought into effective co-ordination a large portion of the country's banking reserves. We have regulated and brought about a general understanding of modern methods of rediscounting. We have created a world-wide market for bankers' acceptances, so that United States trade is now largely financed by our own acceptances instead of by foreign ones, and at the same time our member banks now have an easy means of recourse to the Federal Reserve banks in case they wish to replenish their reserves.

"We have established fiscal agency relations with the government and perfected an instrument which has proved of the greatest value in placing our issues of government securities. Not by investing their own funds, but by acting as a medium of distribution, the Federal Reserve banks have played a most important part in facilitating the participating of all sections of the country in receiving the payments for subscriptions to the loans and in adjusting any drastic dislocation of funds that might have arisen through heavy payments by the banks to the Treasury and by the Treasury to the banks. I believe I may say that the world marvels at the ease with which we are constantly transferring hundreds of millions of dollars without creating any disturbance. Without the Federal Reserve machinery of clearing through the gold clearing fund and without the redeposit organization developed by them, acting as fiscal agents for the government, that would have been entirely impossible.

"The Federal Reserve clearings per day amount now to over $400,000,000. For the first time in our history United States banks have gone into foreign countries and opened branches—in Asia, Central and South America—as adjuncts to our growing foreign trade.

"From a technical and banking standpoint it might have been a better system to have one central bank with branches. Centralization is always an economy of power and makes for greater efficiency. For political and other reasons it was essential to have the system as it is, and the proof of its wisdom lies in its success.

'With political, economic and social conditions what they are, a central bank would be likely to become the target of constant political attack. There would always be suspicion of too extended a concentration of control, either by capital or by 'politics.' The present form offers a better protection in this regard and the present system ought, therefore, to be better protected and to have a better chance for untrammeled development than a full-fledged central bank; provided, however, that it will be able to secure and maintain at all times a Federal Reserve Board composed of men of ability, unselfishness and political independence.

'It is not easy to drive a team of twelve horses. It takes expert knowledge to do that. In the Federal Reserve system we would have twelve horses pulling at cross purposes were it not for the Federal Reserve Board, which guides them to joint efforts in one direction. The Federal Reserve system is a central banking system, the central connecting link being the Federal Reserve Board. Upon the strength of this link the future of the system largely depends.

"Federal Reserve Board members are handicapped in that they are too far removed from the bases of actual business operations and that they live in largely political surroundings. If we want to see the future of the Federal Reserve system assured, the independence of Federal Reserve Board members must be strengthened and their position must be made one of the greatest possible power and prestige, so that the country may be able to secure the strongest possible men to serve on the board."

While much has been done to amend the Federal Reserve Act with respect to widening the scope of operations of the Federal Reserve banks, some amendments will be necessary, Mr. Warburg says, after peace has been restored, to strengthen and clarify the position of the Federal Reserve Board itself.

Mr. Warburg was not willing to make public his ideas of the changes that might be made or should be made in the Federal Reserve system, based on his four years' experience, because he felt he was not warranted, as he said, "to throw into the arena of discussion" at the present time problems of so delicate a nature with which he had been intimately concerned. What he thinks, however, about the relation of government and business he expressed in a public address delivered immediately upon the declaration of war.

"In Europe after the war," Mr. Warburg said, "the most efficient government promotion of industries in many lines will be held to exist in actual government ownership and operation. More than ever before will states become solid industrial and financial unions effectively organized for world competition, driven by the necessity of perfecting a system of the greatest efficiency, economy and thrift in order to be able to meet the incredible burdens created by the war.

"In this world of the future we shall have to maintain our own position, and it requires on our part thorough organization and steady leadership. Under our democratic system this cannot be furnished by changing party governments, but can only be provided by fairly permanent, nonpartisan and expert bodies. These bodies must combine the judicial point of view with that of active and constructive business minds. They must be able to act as expert advisers to Congress and to the industries concerned. They must break down the suspicion and prejudice of government against business and of business against government. They must stand for the interest of all against the exaction or aggression of any single individual or group, be it called capital or labor, carrier or shipper, lender or borrower, Republican or Democrat.

"Our ability to handle effectually the great economic problems of the future will depend largely upon developing boards and commissions of sufficient expert knowledge and independence of character. This will be possible only if both government and people fully appreciate the importance of such bodies, so that the ceountry may find its ablest sons willing to render public service worthy of the personal sacrifice it entails."

BANK MERGER BEING CONSIDERED

A great bank amalgamation proposition has now been formally submitted to the shareholders of Lloyd's Bank in London.

The proposition is that the Capital and Counties Bank should be absorbed, that the National Bank of Scotland and the London and River Plate Bank should be bought.

What this means is indicated by the fact that the Capital and Counties Bank, which is to be absorbed under this plan ranks in resources with the Bank of Montreal. The National Bank of Scotland and the London and River Plate are also very important institutions and the merger if it goes through will make Lloyd's the largest bank in the world. It is among the first dozen of the world at the present time. Sir Richard Vassar Smith is the chairman, and Henry Bell the general manager. Assets are about one billion dollars. It is also reported from London that the London City and Midland, the great institution of which Sir Edward H. Holden is the chairman, is seeking the control of the Clydesdale Bank, the head office of which is in Glasgow.

The interesting statement is made in connection with British bank mergers that there are 300 on record in comparatively recent time, and that of these 150 have occurred in the past fifty years.

ARNOLD vs. DOMINION TRUST COMPANY

British Columbia Court Gives Judgment on Difficult Problem of Life Insurance

The recent decision of the Supreme Court of Canada in the above case is one of the most important life insurance decisions which has been handed down by the Canadian courts for some years, as it settled an important point in reference to the Canadian acts for "securing to wives and children the benefit of life insurance," which have been passed by practically all of the provincial legislatives. This case was decided under the British Columbia act, which is similar to the acts of the other provinces, and which provides that:—

In case a policy of insurance effected by a man on his life is expressed upon the face of it to be for the benefit of his wife, or of his wife and children, or any of them, or in case he has heretofore endorsed, or may hereafter endorse, or by any writing identifying the policy by its number or otherwise has made, or may hereafter make, a declaration that the policy is for the benefit of his wife, or of his wife and children, or any of them, such policies shall enure and be a trust for the benefit of his wife for her separate use, and of his children, or any of them, according to the intent so expressed or declared; and so long as any object of the trust remains, the money payable under the policy shall not be subject to the control of the husband or his creditors, or form part of his estate when the sum secured by the policy becomes payable.

In this case W. R. Arnold, the manager of the Dominion Trust Company, carried over $400,000 life insurance, and made a will containing the following clause:—

"The first $75 000 collected on account of policies of life insurance I give to my wife," together with other provisions in reference to the disposal of the fund.

After Arnold's death over $200,000 life insurance money was collected, while some of the other companies resisted payment, and the wife then claimed the $75,000 out of the $200,000 insurance under the above clause in Arnold's will. The Dominion Trust Company resisted payment, and the question came before the British Colubia courts.

The first point was whether the above will, bequeathing the insurance money to the wife was "any writing" within the meaning of the British Columbia act, and, as there were a number of Ontario decisions holding that a will fulfilled the required conditions, the British Columbia courts followed the Ontario cases.

Identification of Policy Doubtful.

The next point was whether the will in question was a writing "identifying the policy by its number or otherwise," as required by the above section, and on this point the judge who decided the case held that where there are several policies for a total amount exceeding the amount bequeathed by the will, a bequest of a smaller sum to be paid out of the life insurance money generally, without referring to any particular policy, was not a sufficient "identification" of the policy as required by the British Columbia act.

On appeal to the Supreme Court of British Columbia the court was equally divided, two judges holding that the policies were not sufficiently identified and two holding in favor of the wife, so that, the court being equally divided, the original decision against the wife was upheld.

The case was then carried to the Supreme Court of Canada on appeal, and the first point raised was whether the will was a "writing" within the meaning of the British Columbia act.

On this point two judges, Davies and Anglin, held that the declaration required by the British Columbia act may be made by a will, as the Ontario courts had so held, and the legislature of British Columbia, when copying the Ontario act, must be presumed to have adopted the law as laid down by the Ontario courts under the same legislation.

"By a series of judicial decisions in the province of Ontario," says Davies, J., "including those of the Court of Appeal of that province, before the British Columbia legislature enacted the statute in question, it had been decided that the words 'any writing' included a last will, and, I think it must be assumed that when the legislature of British Columbia enacted the statute in question they did so with the knowledge of the judicial interpretation which had been authoritatively placed upon the Ontario statute on that point, and with the intentt that such interpretation would be followed in British Columbia."

Judge Idington, on the other hand, held that, since the Ontario act provides that a declaration in favor of a wife or child shall be an irrevocable trust, such a declaration could not be made by a will, which is a revocable instrument, and may be changed by the testator as many times as he wishes.

The chief justice, without giving any decision on the point, stated that he had doubts as to whether such a declaration could be made by a will, and the result is to leave that point in a rather unsatisfactory condition, so far as the highest court in Canada is concerned—two judges holding that such a declaration can be made by a will, one holding positively that it cannot, and another being doubtful on the point, but inclining to the view expressed by the dissenting judge.

Court Holds Identification not Sufficient.

On the point of identification of the policy the court held, one judge, Davies, dissenting, that the will in question was not a sufficient identification of the policy required by the British Columbia act, and that the claim of the wife to the $75,000 must fail.

"In going as far as they did in order to attain the purpose of the legislation under consideration," said Judge Anglin, referring to some Ontario cases on the point, "the courts of Ontario have, I think, reached, if they have not overstepped, the limit of what the legislature intended to permit when it prescribed as a condition of the efficacy of 'any writing' designed to take life insurance out of the assets available to satisfy creditors and make it a trust fund exclusively for beneficiaries of the preferred class, that such 'writing' should identify the policy or policies so dealt with 'by number or otherwise.' Any method of identification, however widely differing from identification by number, has apparently been treated as sufficient.

"But the decided cases have not gone the length of entirely dispensing with identification, and that, I fear, would be the result of holding sufficient a mere charge by will of an amount representing a fraction of the face value upon all the testator's life insurance, consisting of numerous policies. With respect I cannot accept the view expressed by one of the judges of the British Columbia court that to do so would be to take 'but a short, easy and logical step from those cases,' that is, those already decided. Assuming that the identification prescribed is to be found in all of them, it would be a step from identification of some kind to no identification at all.

"In the case at bar, the insurance, consisting of then policies, two of them for $100,000 each, amounts, in all, to $425,000, of which $207,054.54 has been collected. The bequest is of the first $75,000 collected on account of policies of life insurance. The first $75,000 collected might come entirely out of one of the $100,000 policies or it might come partly out of the proceeds of several policies. The policies might be paid in full in a single payment or only by instalments. Some might be found wholly uncollectable. The executors might proceed more promptly in making proofs of claim to one company than to another. The diligence or the readiness in meeting claims against it of one company might be greater than that of another. Upon some or all of these contingencies would depend the source or sources from which the $75,000 first collected would come, and the determination of what assets would be taken out of the estate and what would be available for creditors. It is, in my opinion, impossible to say that under such circumstances there has been any identification whatever of the policy or policies, the whole or part of which is to form the subject of the statutory trust for the preferred beneficiary. However ready, or even anxious, we may be to give to a statute designed to secure to wives and children the benefit of life insurance such construction as will tend to effect that purpose, we may not entirely dispense with the identification which the legislature has seen fit to prescribe. To do so would be to legislate, not to construe."

The Northwestern National Insurance Company, of Milwaukee, Wisconsin, has been licensed to transact in British Columbia the business of automobile insurance. The head office of the company in the province is Vancouver, and W. H. Blanc, insurance agent, Vancouver, is the attorney for the company.

DIVIDENDS AND NOTICES

BANK OF MONTREAL

NEW INCORPORATIONS

The American Purchasing Corporation, With Capital Stock of $5,000,000, Received Charter

The largest company incorporated during the past week was the American Purchasing Corporation, Limited, with a capital stock of $5,000,000, and head office in Toronto.

The following is a partial list of charters granted during the past week in Canada. The head office of the company is situated in the town or city mentioned at the beginning of each paragraph. The amount noted is the authorized capital, and the persons named are the provisional directors:—

Hutton, B.C.—U. G. G. Sawmills, Limited, $1,000,000.

Trail, B.C.—Trail Mining Company, Limited, $200,000.

Kelowna, B.C.—Simpson Ranch Company, Limited, $25,000.

Ottawa, Ont.—Petigorsky, Limited, $40,000; O. Petigorsky, N. Petigorsky, S. Petigorsky.

London, Ont.—London Oil Company, Limited, $40,000; J. W. Godfrey, H. C. Tull, J. A. Currie.

Winnipeg, Man.—Winnipeg Piano Company, Limited, $600,000; A. E. Grassby, W. A. Smith, F. W. Louthood.

Quebec, Que.—Makamic Pulp and Lumber Company, Limited, $99,000; E. Vignault, J. P. Mullins, J. E. Tobin.

Victoria, B.C.—British Columbia Importers, Limited, $20,000; Pacific Terminal Land Company, Limited, $8,000.

Metabetchouan, Que.—Les Minoteries Electriques de Metabetchouan, Limitée, $ 9,900; A. Tremblay, E. Gagne, O. Tremblay.

St. Catharines, Ont.—The Niagara Tool and Machinery Company, Limited, $40,000; H. Sherritt, N. L. Nelson, H. H. Collier.

Hamilton, Ont.—Mizrochi Zionist Confederation of Canada; S. Levin, J. Goldblath, R. Levy. Hamilton Leather Goods Company, Limited, $100,000; J. Morris, B. Morris, H. Morris.

Sudbury, Ont.—The Sudbury Housing Association, Limited, $100,000; L. O'Connor, D. L. Brown, J. H. Morin. Caswell Lumber Company, Limited, $40,000; G. Caswell, A. J. Jordan, G. J. Valen.

Vancouver, B.C.—Co-operative Union Bakery, Limited, $[illegible]; Latimer and Sons, Limited, $25,000; Rex Millinery Company, Limited $10,000; British Columbia Dock Company, Limited, $50,000; A. Linton and Company, Limited, $12,000; Northern British Columbia Fisheries, Limited, $2,000,000; Consolidated Petroleum Company, Limited, $10,000; Ward's Agencies, Limited, $20,000; Dempsey-Ewert, Limited, $75,000; Scott Fishing Company, Limited, $100,000; Standard Motors, Limited, $15,000; Municipal Land and Loan Company, Limited, $50,000; Burnaby Fertilizers, Limited, $20,000; Perfecto Gear Differential Company, Limited, $25,000; Moore's Cream Whipper Number One, Limited, $10,000.

Montreal, Que.—Parisian Shop, Incorporated, $20,000; [illegible] L. Ross, P. Lapointe. Le Pain de l'Union, Limitée, $20,000; C. J. E. Charbonneau, B. Melancon, J. P. Lamarche. Anglo-American Agencies, Limited, $50,000; G. H. Rainville, C. A. Gersey, S. H. Wiggett. Electrics, Limited, $50,000; G. H. Rainville, C. B. Walsh, S. H. Wiggett. Lafayette Steamship Company, Limited, $500,000; G. V. Cousins, E. W. Westover, R. Stuart. Riordon Sales Company, Limited, $[illegible]; J. Macfarlane, J. MacNaughton, J. G. Cartwright. Flexor Tavler Company of Canada, Limited, $50,000; W. S. Wilson, W. S. Johnson, T. M. Turner.

Toronto, Ont.—Bancroft Marble Quarries, Limited, $[illegible]; W. Page, J. T. Hepburn, J. R. Hodge. J. Conway, Limited, $[illegible]; J. Conway, F. Conway, D. W. Allman. Eldorado Mining and Milling Company, Limited, $[illegible]; A. H. [illegible], W. H. Wallbridge, W. J. McBride. Grimshaw Wool Company, Limited, $[illegible]; M. D. Grimshaw, R. K. Grimshaw, G. G. Paxton. International Agencies, Limited, $[illegible]; G. J. [illegible], W. Salter, C. A. Muir. [illegible] Manufacturing Company, Limited, $[illegible]; W. H. Ford, L. M. Singer, H. Goldstein. Veteran Mechanical Farming Company, Limited, $[illegible]; G. Miller, J. A. McCaffrey, B. F. Cooper. Noles and Rotenberg, Limited, $[illegible]; W. H. Ford, L. M. Singer, H. Goldstein. York Manufacturing Company, Limited, $[illegible]; A. L. Reid, C. H. Croft, A. M. Borthwick. American Purchasing Corporation, Limited, $5,[illegible]; H. W. Shapley, A. W. Langmuir, W. A. J. Case. Saunders-Alberta Collieries, Limited, $50,000; G. H. Kilmer, H. H. Davis, H. V. Hearst. Canadian Odorless Disinfectant Company, Limited, $50,000; T. H. Wilson, J. W. Preudy, J. Richards.

LIFE INSURANCE IN NEW YORK STATE

Part II., the life volume of the annual report of the New York State Insurance Department, compiled from the audited annual statements of the 38 life insurance companies authorized in that state, covering the business of 1917, was issued on the 24th inst., by Superintendent of Insurance Phillips.

At the close of business for the year, the life companies were possessed of $5,467,600,437 of admitted assets, an increase of $322,975,960 over 1916. The liabilities, excluding gross surplus and special funds of $296,155,796 were $5,171,444,641, an increase of $318,495,435 over the previous year.

The total income was $1,095,403,388, an increase of $103,950,930. The amount of premiums received was $800,904,151, or $64,584,786 more than in 1916. The companies disbursed in 1917 $761,284,266, being $40,658,875 more than in 1916; of that amount $552,366,677 was paid to policyholders, while the cost of management (including shareholders' dividends) was $208,917,589.

There were 1,380,120 "ordinary" policies issued and paid for during 1917, with insurance of $3,010,857,881. Compared with 1916 there was an increase of 120,860 in the number of policies written, and the amount of insurance increased $613,679,273.

The total number of "ordinary" policies in force on December 31, 1917, was 9,517,941, insuring $18,457,378,561, a net increase of 705,339 policies and $1,758,551,803 in insurance. The amount of "industrial" insurance in force was $4,762,098,009, being an increase of $352,256,125, making a total increase, for both classes of business, of $2,110,807,928 of insurance.

The business in force in the state of New York at the end of 1917, and transacted therein during that year by all life insurance companies of this and other states including both "ordinary" and "industrial" insurance, was as follows: Policies in force, 8,522,058, insuring $4,146,493,776; policies issued, 1,294,000, insuring $733,104,832, an increase in insurance in force of $389,390,555, and in insurance written and paid for in 1917 of $106,084,132.

The following comparative figures show the sources and amounts of increases and decreases, in the unassigned funds (surplus), of the companies for 1916 and 1917:—

	1916.	1917.
Gain from loading	$ 11,274,056	$ 4,181,818
Gain from mortality	55,002,297	69,038,817
Gain from surrendered and lapsed policies	14,378,967	13,958,463
Gain from interest and rents, less amount required to maintain reserve	82,571,403	87,427,167
Loss from annuities	182,832	300,051
Loss from investments	556,570	12,639,517
Loss from dividends to policyholders including net increase or decrease in dividend funds apportioned and unapportioned	126,870,179	153,486,880
Loss from miscellaneous sources	28,058,224	*701,277
Total gain	7,540,918	8,881,004

---

*Gain.

The total receipts of the department for the fiscal year ended June 30, 1917, were $1,330,108.22, the total expenditures were $400,394.45, an excess of receipts over expenditures, covered into the state treasury, of $929,713.77.

The par value of the securities held on deposit by the department on December 31, 1917, belonging to the various insurance companies of all classes required by law to make such deposit was $46,322,719.

The city of Victoria, B.C., will not be able to carry out all the improvements provided for in its municipal programme. This is due to the difficulty of securing funds in the market, and also to the additional cost to which the new works would be subject. A recent award of the Conciliation Board provided for the payment of a uniform rate for street work of $4.25 per day.

OUR PROSPERITY
And What It Has Cost

You remember the uncertainty as regards trade when the war broke out.

We finished 1913 with a balance of $293,000,000 against us. We wondered——!

The British Navy swept the German flag off the seas. The submarine remained, and the floating mine. Death lurked in the path of every vessel that carried the products of our farms and factories.

None but heroes of the finest type would have faced such dangers. But because the men of the **Merchant Marine** ***did*** face them, we finished 1917 with a trade balance of $314,000,000 in our favor.

We were able to fill war orders amounting to one billion, eight hundred and twelve million dollars ($1,812,000,000) from 1914 to 1917.

But what a price has been paid.

Remember the Lusitania! Remember the 176 vessels of which all trace has vanished, together with crew and cargo! Remember the 15,000 seamen of the ***Merchant Marine*** who have fallen a prey to the U-Boat and the hellish mine!

We are enjoying prosperity that was not dreamed of at the beginning of the war. Let us show our appreciation in the only way worth while—by contributing handsomely to the support of the widows and orphans of the seamen who have died for us. Justice demands we shall not let them want.

POTASH SODIUM SULPHATE IN SASKATCHEWAN

A discovery that will prove of untold value to the allies has been made 30 miles north of Maple Creek in an immense deposit of potash sodium sulphate, one which experts claim consists of millions of tons of these minerals.

The deposit was discovered in the dried-up bed of an old lake, and the work of getting it out will amount to practically nothing. The whole bed of the lake, which is 2½ miles long and over one mile in width, has been staked and filed on, and work will be started at once in clearing away the top layers of dirt and erecting buildings for the carrying on of the development of the bed.

The claims have been filed by Saskatchewan men who will retain their control. Professor McLaren, of the Saskatchewan University, has examined the minerals and pronounced them perfect, while expert engineers have estimated the deposit at millions of tons. A branch line of railway is to be run from the works to Maple Creek.

SASKATCHEWAN CROP OUTLOOK

A wonderful improvement in the crops of the province is reported by the Saskatchewan department of agriculture, according to reports received during the past fortnight from the special correspondents attached to the department.

The rains of recent days, together with good weather, has had a very beneficial effect on the crops in all districts. Harvest will be general next week, the reports indicate. The scarcity of men is emphasized in a number of the reports, as well as slight frost damage.

Sir William Mackenzie was in Ottawa recently to discuss the payment for $60,000,000 of Canadian Northern Railway stock to be acquired by the government. The arbitration board, it will be remembered, made an award of $10,800.000, but a price of $10,000,000 has, it is understood, been agreed upon as sufficient.

ECONOMY MUST BE ENFORCED

The National City Bank, in its August circular, says: Proposals for new taxation do not sufficiently recognize the necessity for greater economy by the whole body of consumers. Attention is fixed upon business profits and large personal incomes, but higher taxes upon these will not materially reduce private consumption, release man-power or increase the total amount of funds available to the treasury. We agree that such increases are in order, but their effect will be to reduce the amount coming through loans to almost the extent that receipts by taxation increase. We mean by this, that private investments of the kind made by rich people and by business corporations are now under government control, and surplus earnings and incomes in these classes are either going into approved investments, which the government deems it not desirable to restrict, or into government loans. The reductions which can be forced in the private expenditures of such people will not be of great significance, because there are not enough of them. The industries of the country are not employed to any important extent in making things for these people. In order to release any considerable amount of labor and factory space, save any important amount of coal, relieve the congestion upon the railways or check this expansion of bank credit there must be a curtailment of expenditures by the main body of the people. The farmers are the largest single class in the country and with farm products at present prices their purchasing power is greater than ever before. The wage-earning class is next, and the same is true of its buying power. In ordinary times it is nobody's business how anyone spends money that he has earned and rightfully owns, but now every private expenditure comes in conflict with the government. Nobody likes to urge heavier taxation upon articles of common consumption, but for the double purpose of obtaining money from these sources and relieving the industrial and banking situation nothing else will answer so effectively. In the absence of that the remedy must be found in more effective campaigning for the widespread distribution of Liberty bonds and war-savings stamps. The question of whether the government shall raise money by taxation or loans is not the vital one; the vital thing is to get its work done and as a means of reducing private expenditures taxation is more certain than loans.

VOCATIONAL STATISTICS

During the month of June 286 disabled soldiers graduated from courses of industrial re-education conducted by the Vocational Training Branch of the Department of Soldiers' Civil Re-Establishment.

Figures compiled by the statistical division show that on June 30th 4,612 returned soldiers, so disabled that they cannot resume their pre-war occupations, had been approved for courses of re-education. The number of such courses in progress on that date was 2,070, and all but 27 of the students were discharged men in receipt of vocational pay and allowances. The other 27 had begun their courses while still in hospital receiving some treatment.

The number of graduates during the month of June (286) was the largest for any single month to date, and brings the total number of graduates up to 767. Of the 4,612 men for whom courses have been approved, 302 have refused the benefit, while 442 have begun their courses and not finished them for various reasons. Included in this 442, however, are a number of men who were granted permission to discontinue temporarily in order that they might engage in the season's farm production work.

In addition to the above figures on industrial re-education, the statistical division reports that for the month of June 1,743 men were attending occupational therapy classes conducted by the Department of Soldiers' Civil Re-Establishment in the military hospitals as a contribution to the various forces engaged in restoring health. This was an increase of nearly 100 over the month of May. This figure, however, does not include the men taking part in the ward occupations, such as basketry, embroidery, weaving, etc., conducted in the wards themselves.

....	....	....	....

*Par value of shares, $25.00.

A beautiful woodland lot of 40 acres, at the confluence of the Grand and Conestogo Rivers at Conestogo, has been handed over by Mr. Walter J. Snider, the miller, to Hon. Finlay Macdiarmid, minister of public works, representing the Ontario government, with the object of furthering the policy of conservation and reforestation throughout Canada. The property has been in possession of the Snider family since about 1850, and is covered with majestic forest trees.

Monthly Income Policies a Necessity

A legacy of life insurance amounting to $100,000 was completely dissipated in seven years by faulty investments and expensive living. In another case a beneficiary squandered the proceeds of a life insurance policy amounting to $50,000 in a single year. To protect the beneficiary against inexperience in making investments, and against extravagance, the monthly income policy has been introduced, providing an automatic, safe and profitable investment of life insurance funds. Supplement your existing insurance with a monthly income policy. It can be written on the life, limited life or endowment plan. Such a policy with our disability clause incorporated is without an equal in furnishing ideal household protection. We will gladly furnish full particulars and illustrations.

WOOD PULP INDUSTRY IN BRITISH COLUMBIA

New Industry Established During Last Few Years Has Already Developed Rapidly

During the past seven or eight years the province of British Columbia has seen another of its potential sources of wealth commence its development at the hands of an aggressive organization which has grown rapidly as the possibilities of the markets advanced and were proven, and this development, it is stated, would have been greater had there been a greater supply of ships for carrying, because the trade thus far is a purely export one.

For many years the vast spruce forests of this province have stood practically untouched, excepting, perhaps, their use as lumber. But the recognition of their possibilities as pulp, and the increasing need of establishing a new supply in the face of the growing scarcity of pulpwoods in other sections of Canada, induced capital to investigate and then commence development.

In 1911 the Whalen Pulp and Paper Company pioneered the high-grade sulphide fibre industry, starting with one mill at Mill Creek, on Howe Sound. This company is still the only one manufacturing this pulp. Its market is entirely export, its product going to Japan, the United States, Australia and New Zealand. The pulp it manufactures is the raw material which goes to make high-grade book and other papers.

Mills Produce High-grade Pulp.

In 1910 the Mill Creek plant commenced operations, producing some 18,000 tons of pulp. This plant has been in operation ever since. The demands of the market increased and the industry grew larger. In 1916 the company took over the Swanson Bay plant, near Prince Rupert. This establishment, under the new name of the "Empire" mill, is a modern sulphite plant which, in 1910, had a capacity of 8,000 tons of pulp annually. This capacity has been increased to 12,000 tons. Consequently the two mills of the company produced about 30,000 tons of high-grade pulp in 1917.

A third complete plant at Quatsino Sound, on Vancouver Island, known as the "Colonial" plant, started operation on August 10th. It has been under construction for some time. It is a modern sulphite mill with a production of 18,000 tons, and is designed to ultimately produce 60,000 tons of bleached sulphite.

Sawmills operated in connection with the pulp mills at Mill Creek and Quatsino Sound have capacities totalling 500,000 feet per 24 hours. They cut the higher grades of spruce, cedar and shingles. These mills produce between 20 and 40 million feet of cedar annually, and 100 million cedar shingles.

These plants are supplied by timber taken from 150,000 acres of timber lands held under pulp leases. They now employ about 1,600 men, nearly a quarter of whom are working in the woods.

Sulphite Industry in Infancy.

The sulphite pulp industry of British Columbia is in its infancy. Other companies will come as the vast resources of the province are more widely known and as the growing need for more new pulp fields are felt. Owing to the fact that the spruce stands scattered through other timber growths, it is necessary to have plants that can utilize these other trees and produce timber from them. Also it is necessary in order to take the most commercial advantage from the industry to use the higher grades of spruce logs for other than pulp purposes. Any spruce log will do for pulp, but only the best can be used for aeroplane stock or other high grade uses. The prices for high-grade lumber are better than would be realized from the pulp and, consequently, it is good business to cut lumber where the value is above pulp values.

The sulphite process, which is one of the only two methods of making wood pulp, is that of making pulp through an acid process. The other process is the soda or alkaline method. The essential feature of the sulphite process is the employment of a solution of sulphurous acid combined with a certain amount of magnesia or lime. Sulphite wood pulp paper is stronger, harder and more transparent than that made under the soda process.

British Columbia is particularly well supplied with the essentials for pulp manufacture. Its markets stand waiting and eager. It has the raw material in its forests, and, in addition, its rugged coasts and interior presents the added advantage of hydro power. The plants now operating have taken advantage of these to a large extent. The mills at Mill Creek and at Swanson Bay have each their own hydro-electric development of about 3,000 horse-power each. The water power at the Quatsino plant is not yet harnessed, but it is extensive and will be developed in the near future.

British Columbia presents a very great opportunity for the pulp manufacture, either inland or on the Pacific waters. The near future will undoubtedly see a very great development in this industry.—Vancouver Sun.

RAILROAD EARNINGS

The following are the earnings of Canada's transcontinental railways for the first three weeks in August:—

Canadian Pacific Railway.

	1917.	1918.	Inc. or dec.
August 7 ..	$2,559,000	$2,882,000	+ $323,000

August 21	748,500	912,700	+ 164,200

DESPAIR TO GERMAN HOPES

Without the men of the Merchant Marine, our Allies would be at the mercy of Germany. Yet these men are quiet and unassuming. They wear no gold lace or natty uniform.

The merchant marine includes almost every type of craft, sails every sea, and faces death in a dozen forms every day. The heroic men of the service will show fear at nothing, and there is nothing on the sea or under the sea that can scare them off the sea.

Lord Charles Beresford is authority for the statement that never has a man of the merchant marine refused to sign on for a voyage because of the danger.

Every day boats sail "over there" or back home again, and none know what horror and danger may lay in the path. Not a week passes but some of these ships fall victim to the U-boats. In nearly two hundred cases ship, cargo and crew have disappeared beneath the waves for ever, leaving not a trace.

To date more than 15,000 of these men have played the game and lost. But their sacrifices have not been unavailing and Germany knows full well that if she could have frightened this important arm of the war services off the seas, the war would have been won for her many months ago.

Without the merchant marine our allies would be at the mercy of the Hun. Our armies would have neither food, munitions or reinforcements. They could not fight for a week. Therefore Germany planned to play her last card and utilize every device of fiendishness known to modern warfare in an effort to drive these invincible mariners off the sea.

To-day our merchant marine still sails the seas, unconquerable and dauntless as of old. It has defeated Germany's would-be master-stroke of the war. But it has to date cost 15,000 lives.

Here is the most awful part of the situation. Rightly or wrongly, there is no official recognition of this service—not a hand is moved, officially, to look after the widows and orphans, the dependants of these brave sailors who have gone down in the Empire's cause.

The Navy League has taken the merchant sailor under its care. It is straining every effort to collect sufficient funds to assure a reasonable living pension for the dependants of the heroes who have made their last voyage in our service.

Ontario is celebrating Sailors' Week with the object of raising $1,000,000 for the fund. In view of the above explanation, there should be little difficulty in raising the amount.

COBALT ORE SHIPMENTS

The following is a statement of the shipments of ore in pounds, from Cobalt Station for the week ended August 23rd, 1918:—

McKinley-Darragh, 85,453; Dominion Reduction, 88,000; O'Brien, 64,010; La Rose, 78,646; Aladdin Cobalt, 60,000; Kerr Lake, 60,227; Buffalo, 64,075; total, 500,411.

The total shipments since January 1st, now amount to 19,455,889 pounds, or 9,727.9 tons.

FARM CONDITIONS IN ONTARIO

The following is a summary of recent reports made by agricultural representatives to the Ontario Department of Agriculture:—

Farmers in the County of Victoria declare that spring grains have been the best crops for ten years, and the general experience in the province is much akin to that statement. Most of the grain fields have been harvested, although for the last few days this work has been held up by rains, which, however, were very welcome to late potato, root and even some corn fields, which are already picking up after being tried by the drouth of the preceding three or four weeks. Threshing is well advanced, and is showing excellent results. More than usual of this work has been done in the fields owing to favorable weather and to save labor.

Corn generally is advancing, despite the drouth. A month of warm weather—sometimes very hot—favored it on the whole. Some early varieties in Essex are already in the shock. Despite the cool June weather most fields of ensilage corn are in height of stalk fully two weeks ahead of last year. Clover and other grasses have been much helped in their second growth by the recent rains, which were much needed. Reports vary greatly as to the prospects for both clover and alfalfa seed. Onions are being shipped by the carload from points in Essex and are much earlier than usual. A few fields of Warren tobacco have been harvested in Essex. The plants are rather small in leaf owing to the very dry and hot weather of the past month.

Owing to the drouth live stock have felt the lack of good pasture, but otherwise they are in good condition. Young cattle are selling at from 9 cents to 11 cents a pound, but more finished animals are bringing as high as 14 cents. Hogs remain at from $19 to $19.50 per hundredweight. Young pigs are in demand, weanlings fetching $12 a pair.

The farm labor situation continues well in hand. Helpers now needed are fruit pickers in orchards, and men for the September general cleanup. Preparation is also being made for getting fall wheat, but the ground has been very hard for plowing, owing to the drouth. The heavy rains which came late in the week are expected to help in this respect. According to the Kent representative the farmers of that leading winter wheat county are satisfied to put in spring wheat next year if the ground or other conditions do not permit planting fall wheat this fall. The great success of spring wheat this year encourages this view, but the action of the Grain Commissioners in arranging for a bonus of five cents a bushel on Ontario winter wheat may have some effect in increasing acreage. There now appears to be plenty of seed available.

REMUNERATION OF MUNICIPAL OFFICERS

A table has been prepared by the Vancouver "Daily Sun," showing the comparative monthly salaries paid to the principal officers in municipalities adjoining the city of Vancouver. The table is given in part below:—

Municipalities.	Clerk.	Assessor. Contract.	Treasurer.	Chief police.
North Vancouver city	$150	$1,000 p.a.	$150	$140
North Vancouver district .	200	125	clerk	125
West Vancouver	150	clerk	clerk	115
Point Grey	180	135	150	150
Richmond	150	clerk	clerk	125
South Vancouver	160	135	clerk	130
Burnaby	200	110	175	145

PRODUCE OF WAR GARDENS

In response to the call for increased production the people of the cities, towns and villages of Canada have vastly increased the garden acreage in this country. Last year it was estimated by the "Agricultural Gazette" that the value of the war gardens' produce amounted to somewhere between $20,000,000 and $30,000,000. This year Mr. Frederick Abraham, honorary chairman of the War Garden and Vacant Lot Section of the Canada Food Board, after a survey of Canada's war garden reports from coast to coast estimates that this year's production will be two or three times greater than last. On this basis the war gardens of Canada this year have produced anywhere from $40,000,000 to $90,000,000 worth of fruit and vegetables. Taking a conservative view of these figures, the war garden production in Canada for 1918 should be worth about $50,000,000.

FARM MORTGAGES FOR LIFE COMPANIES

In helping to finance the recent extraordinary demands upon American agricultural production, American life insurance companies during two years of the world war increased by nearly two hundred million dollars their mortgage loans in those farming districts which are now supplying the bulk of the food-stuffs to this country and its allies. In addition to this net increase, which was during 1915 and 1916, the same companies made new loans of two hundred million dollars to the same sections during the first nine months of 1917. This second sum, however, does not represent the net increase for the later period, as the amount of matured mortgages, pre-payments, etc., has not been deducted. About 95 per cent. of both these funds was sent to nineteen states in the west and south. This and other information concerning one source of financial support back of the expanding agricultural production of the United States is disclosed in a printed report made to American life insurance companies by Manager George T. Wight, of the Association of Life Insurance Presidents. This report is based on original statistics which have just been compiled covering 97½ per cent. of all outstanding real estate mortgages held by American life insurance companies.

PERSONAL NOTES

Mr. F. S. Craig and Mr. J. E. Woods, of Oldfield, Kirby and Gardner, Winnipeg, have left for overseas. The accident, guarantee and casualty department of this firm, formerly managed by Mr. Woods, is now in the care of Mr. G. Innis Mackenzie, of Regina.

Mr. A. F. W. Severin has been appointed special agent and adjuster for the London & Lancashire Guarantee and Accident Company, making his headquarters in Winnipeg. Mr. Severin will have general supervision over the company's guarantee business in the west.

Mr. H. B. Mackenzie, formerly general manager of the Bank of British North America, but who retired from that position when his bank was absorbed by the Bank of Montreal, was presented with a handsome gift at a dinner held recently by the staff, to show their appreciation.

Mr. Morley Donaldson, formerly vice-president and general manager of the Grand Trunk Pacific Railway, died at his residence at 504 Albert St., Ottawa, on August 27th, at the age of sixty-five years. He was a life-long resident of Ottawa, and was extremely well known in business circles. He was for many years general superintendent of the Canada Atlantic Railway, and was for a long time in the service of R. Gilbert & Company, of Montreal.

DEATH OF TRUST AUDITOR

The death occurred at the Toronto General Hospital on August 27th of Mr. George Macbeth, Alexander Apartments. Mr. Macbeth was auditor of the Toronto General Trusts Corporation until his death, which position he occupied for the last 20 years, and he was also auditor of a number of other institutions in Toronto and outside points. He was a prominent Mason and a member of Zetland Lodge at London, Ontario. In politics he was a Conservative, and was an attendant for many years at St. James' Cathedral.

TOTAL OF BULLION SHIPMENTS LARGE

Total bullion shipments from the beginning of this year to date total 6,494,111.76 fine ounces, of an estimated value of $6,118,637.41, being the refined product sent out by nine mines as follows:—

	Ounces.	Estimated value.
Mining Corporation	2,139,522.67	$2,013,710.95
Nipissing	3,037,507.12	2,018,422.24
Kerr Lake	717,047.25	713,462.02
Dominion Reduction	255,200.00	149,957.30
Buffalo	42,568.00	38,503.30
O'Brien	257,619.00	242,789.00
Timiskaming	29,559.72	26,602.85
Silver Eagle	2,953.00	2,214.75
Crown Reserve	12,135.00	12,975.00
Total	6,494,111.76	$6,118,637.41

In comparison with the above figures, compiled by the Timiskaming and Northern Ontario Railway officials, bullion shipments from January 1st to August 3rd, 1917, totalled 6,821,081.24 fine ounces of silver, worth $5,240,873.21. While the 1918 output in bullion to date is several thousand ounces below that of a year ago, the increased price of the precious white metal makes this year's valuation $875,700 over that of 1917 and conservative judges look for a new high record in value to be recorded by December 31st.

The Etobicoke Township Council struck its rate at a special meeting held recently. The tax rate for 1918 will be 21 mills, an increase of over 4 mills on last year. The council claim that the increase was largely due to the increased cost of labor entailed in repairing roads worn out while the Hamilton highway was closed. The school rates for the different sections average about 6 mills. They range from less than one to 10 mills.

RECENT FIRES

The Monetary Times' Weekly Register of Fire Losses and Insurance

Almonte, Ont.—August 27—Flannel mill owned by Wm. Thoburn was damaged. Estimated loss, $100,000.

Broadview, Sask.—August 21—Barn of R. Bird, two horses and two cows were destroyed by lightning.

Chatham, Ont.—August 26—Residence on the farm of J. O'Brien was destroyed. Estimated loss, $2,000.

Clinton, Ont.—August 23—The Grand Trunk Railway freight sheds and the Doherty Piano Company's warehouse were damaged. Caused by spark from passing engine. Estimated loss, $1,000.

Colborne, Ont.—August 22—Barn of Peter Fisher was destroyed by lightning.

Hamilton, Ont.—August 26—Shops of the Toronto, Hamilton and Buffalo Railway were damaged. Estimated loss, $10,000.

Hull, Que.—August 26—Residence of Mr. Leon Dubois, 178 Leduc Street, was damaged. Estimated loss, $1,000.

Montreal, Que.—August 20—Premises of the Metal Shingle and Siding Company, Limited, corner of St. Catherine and Delorimier Streets, were damaged. Caused by short circuit in electric wires. Estimated loss, $75,000. Insurance carried in Lloyds Company amounted to $101,000.

August 26—The oil tanker, "Lake Manitoba," at the wharf of the Imperial Oil Company, Longue Pointe, containing 1,500 tons of crude oil, 500 tons of copper, 500 tons of coal and a quantity of other cargo, was destroyed. Estimated loss, $1,500,000.

August 27—Bakery of J. A. Brousseau, Boyer Street, and 31 horses were destroyed. Estimated loss, $125,000. Sash and door factory of H. Chagnon and Company, 37 Burnett Lane, was damaged. Estimated loss, $94,000.

Newcastle, N.B.—August 21—The carriage shop of W. J. Hogan was damaged.

Owen Sound, Ont.—August 28—Drygoods store of Wm. T. Lee and Sons was damaged. Estimated damage to stock, $35,000; to building, $2,500.

Southampton, Ont.—August 19—Home of Rankin Bragdon was destroyed. Caused by defective flue.

Stanley, N.B.—August 24—Mill of S. Douglass was destroyed. Estimated loss, $20,000. Insurance carried, $6,000.

St. Catharines, Ont.—August 25—Plant of the Steel and Radiation, Limited, was damaged. Estimated loss, $6,000.

St. Laurent, Que.—August 24—Hay sheds, stables and offices of Odilias Crevier, hay and grain merchants, were destroyed. Cause reported as incendiarism. Estimated loss, $20,000.

Tillsonburg, Ont.—August 26—Elevator, carload of corn, car of salt and a quantity of food of Mr. Fred. Kicksee, were destroyed. Cause reported as spontaneous combustion.

Wabamun, Alta.—August 20—The King George Hotel and drug store were destroyed.

Windsor, Ont.—August 23—Buildings at Devonshire race track were damaged. Estimated loss $8,000.

Shortcomings Within and Without

Canada Life's President Emphasizes Need for Co-operation Between Home Office and Agency Force—Room for a More Comprehensive Advertising Policy—Influence in Controlling Legislation—Fields for New Business.

Address by Mr. Herbert C. Cox, President Canada Life Assurance Company, President Canadian Life Insurance Officers' Association. Delivered at Life Underwriters' Association Convention, New York City, 4th September.

HOWEVER simple or however intricate in its conception and however true in its action a mechanism may be, there are a thousand and one contingencies which may at an unexpected moment interfere, seriously or otherwise, with its proper functioning. From the giant of the steel foundry to the hyper-sensitive Swiss movement, all are subject to trouble from within and without, which, no matter what the primary cause, may result in loss of energy and time affecting a very wide circle.

Organizations, economic or political, financial or industrial. suffer from imperfections inherent to their nature or arising from some outside influence, despite the keenness of the offensive and defensive planned by the alert minds charged with their progress.

No apology, therefore, is necessary for the suggestion that shortcomings may and do exist in an undertaking which deals so intimately as does life assurance with the human element whose proneness to err is so usually conceded. With no desire to be pessimistic, but rather to point the way with optimism to greater possibilities, it is my purpose to touch very lightly upon some features of our work which have impressed themselves upon me during several years in the management of an important general agency as well as in my present executive relation·

In an effort so tremendous as is ours, every ounce of human energy, every moment of time, and every dollar of money should be rigidly put to account. This can only be done through the utmost measure of entente between the home office and the agencies. Complete harmony and unity of action between these two great divisions of our anatomy would be perhaps too much to expect, but the nearer we approach the ideal relation of head and heart for which we look in the human bodies we insure, the nearer we shall come to the ideal in life assurance organization.

The heart of any life insurance company is, of course, the agency force whose function it is to continually pump the life blood of new business through the system and any murmur or leak in this organ should be immediately registered in the head—the home office. Essential, then, is the adequate care and nourishment of the heart,—in other words, the proper training and equipment of the producer. Less than ten companies, so far as information is available, have adopted any definite method of educating their salesmen, the balance drafting thousands of men into the business each year in the hope that some may find permanent lodgment and success. Necessarily much waste attends this process of elimination and we are here given the opportunity for some real cost accounting. The names of the companies which have adopted the wiser course are readily obtainable and any or all of them will, no doubt, be willing to share their method. Surely the agency managers as well as the home office must realize the advantage of skilled labor and the greater results to be obtained by its use.

Following our simile further, the heart must not be allowed to run away with the head, as it frequently attempts to do in the belief that it reflects the public pulse, nor, on the other hand, must the head in its cold logic stifle the enthusiasm and fervor of its sister organ, but it should seek rather to guide and utilize that spirit to the end that both head and heart may attain their full normal capacity and keep the body politic healthful and clean. Through intensive education rather than extensive instruction of the agency representative will, I believe, be found the way to this desirable unity.

Is the vision of the executive and the agency manager sufficiently broad? Are we alive to the bigness of our opportunities? Do we realize the possibilities for men of parts in this business? Without disparagement of our present forces may we not ask whether we have not in our own hesitation failed to attract to our standard the high capacity it properly commands? Do we quite appreciate the potential earning power to be developed by men of brains and breadth? I must confess to a frank and great surprise a few days ago upon learning that an agency manager of my own company, in a territory not too inviting, had in seven months earned more than the combined annual salaries of four important executives in the home office. Immediately the foregoing queries presented themselves and the answers were unfortunately all in the negative. Should we not hitch our wagon to a brighter star?

It is, perhaps, not unnatural that with the want of education of the salesman there should also be a lack of constructive and instructive propaganda among the purchasing public. Granted that most, if not all, companies individually and periodically advise the general reader through the medium of the public press of their assets, their assurances in force, the amount paid in death claims, etc., etc., etc., but is this interesting or informing to those who may take the time to read it? Is it well-directed energy and expenditure from the home office viewpoint? Is it of service to the salesmen? The mission of effective advertising is to relieve the salesman as largely as may be of the onus of educating the prospect so that his time and effort may be directed purely to the task of selling his policies. Much of our advertising is assuming this character with, I believe, very material results to the companies who have adopted it and whose field men have had the acumen to sense its value to them. Upon the appreciation of you, gentlemen, and upon your ability and readiness to turn to account such a tremendous selling aid will depend the attitude of the executives to its continuance and to its wider use. A few years ago your association evolved a plan of institutional advertising with the proposal that it should be adopted by the companies and the expense shared by all. For various reasons it was thought not to be feasible, but I am still hopeful we may yet be able to agree upon a joint plan of general propaganda which will serve better than the present spasmodic individual effort to tell the public in simple, non-technical language of the great basic principles of this institution of life insurance, of its essentially co-operative character, of its influence upon the individual and his home, upon his business and upon the State, of the success with which you and the companies with which you are associated are carrying on a great trust relationship with a minimum of expense and a maximum of service. When there is engendered in the public mind a full realization of what life assurance stands for, then and then only will that public begin to avail itself in proper measure of the stupendous advantages it offers.

Attitude of Government.

May I here venture to deplore the practice of the various states and provinces in taxing unduly the premiums of your clients, the tendency of this taxation being ever upward? The attitude of the government of Great Britain in this regard is well known. It is perhaps too much to hope that a similar viewpoint will be adopted on this continent, but we must never cease our effort not only to prevent the increase of these imposts—we must redouble our exertions toward their reduction. The members of your associations can very materially assist in leading to the light those in our legislatures who are responsible for the anomaly of this tax upon thrift. The interest of your client is your interest in this respect.

Disappointment and discouragement come to you in your work. You lay the blame at the door of the home office. For how much are you yourselves responsible? You remember the old adage, "The Lord helps those who help themselves." In writing the last application you had declined, did you use your best judgment? Did you not rather court disappointment when you submitted it? Disappointment not only for yourself but for your [illegible]? Does it not occur to you when soliciting prospects whom you may know to be impaired that you are wasting your own time and that of several departments in the home office? A company I know used for many years as the basis for competitions and comparisons the "applications written." In recent years the unit has been "policies issued," with the result that its declinations have decreased 25 per cent., and the effort of its salesmen has been more effective. Help to conserve!

Into the relationship between the home office and its agency managers, between those managers and their local representatives, and between all of us and our clients there enters very forcibly and very continuously the element of courtesy. In our communications, verbal or written, let us never forget the other fellow's feelings. We must have patience and a kindly consideration for his point of view. Harsh or unwelcome things need not be said offensively. On the contrary, disagreeable things can and should be said in a way to elicit the co-operation and gratitude of their object. In support of this, I recently heard an executive officer say to a fellow official, "If the company ever has anything disagreeable to say to me, I hope you will be asked to say it." We can all develop this faculty of kindly courtesy which will more than any other one thing be instrumental in the removal and prevention of friction and in the increase of efficiency in a great organization. Education as to its merits will help. One company claims to have accomplished much improvement in its home office correspondence by this means, and points to the fact that although the idea met with considerable opposition from the reactionary element, everybody found their point of view freshened and quite enjoyed the actual experimentation with the subject. Try it if you have not already done so. Your influence will expand.

Good Field for New Business.

Are you securing a proper proportion of new business from existing policyholders? Are you taking full advantage of opportunities for new business in connection with settlement of matured endowments, death claims, deferred dividends, five-yearly and even annual dividends? Does your company stimulate and urge you in this direction and provide you with relevant information and suggestion? Economy of time is here involved, as it would seem that a given amount of business can be secured through these sources with the expenditure of less time than from what might be termed, for want of a better word, "non-converts." The home office and the agent are, therefore, both responsible for any failure to conserve the time and opportunity which really belong to the company and should be utilized to the fullest possible extent.

Time was when the name of any company met in competitive canvass was anathema to the agent, who straightway proceeded to berate it out of his way. Much valuable time was wasted, ill-feeling engendered and actual harm done to all involved. Your associations have done much to eliminate this element of discussion and it has almost entirely disappeared from the canvass of the more successful salesmen, but there is still room for improvement. It is not sufficient to instruct the agent to refrain from it. He must be provided with a substitute. There are plenty of fundamental points about his own proposition upon which he can dwell and insist, if he be properly conversant with them. It would seem that this defect can be further eradicated by education from the home office. The growing tendency to exchange of thought and actual experience between companies, between the actuaries, the medical directors and agency officials is having a marked effect in this direction and will, I believe, influence the situation in yet larger measure.

The old spirit of aloofness with which the home office sought to withhold itself from the field has been gradually disappearing. We are fast becoming democratized as becomes a great public servant and are presenting to that public whom we serve a great institution capably officered, fully manned and economically managed, with an appeal to and demand upon its confidence which cannot be gain-said. Prejudice may still exist against life insurance, and criticism may still be directed against its opponents, but we have the remedy in frank publicity. Greater understanding of our principles and aims carries fuller appreciation of them. We can but gain through a wider exposition of all that pertains to our work in its many phases. Through this, rather than through restrictive and hindering legislation will the future possibilities of life assurance be realized and its full effectiveness be made available for the individual and the State.

NOVA SCOTIA MUNICIPALITIES' CONVENTION

A convention of the Nova Scotia Union of Municipalities was held in Lunenburg, N.S., on August 30th. A number of addresses were delivered by Professor W. S. Blair, Miss Agnes McGuire, Mr. W. B. McCoy and others.

The following officers were elected for the year 1918-19: President, Hiram Goudey, of Yarmouth; first vice-president, A. J. Bannerman, councillor, Pictou County; second vice-president, A. C. MacCormick, mayor, Sydney Mines; secretary-treasurer, Arthur Roberts, K.C., Bridgewater; auditor, W. W. Foster, city auditor, Halifax. Executive committee, Parker Archibald, municipal clerk, Halifax; H. H. S. Perry, councillor, Lunenburg County; H. L. Dennison, K.C., town solicitor, Digby; Fred. Harris, town clerk, Annapolis County; C. L. Dodge, municipal clerk, Kings County; A. C. Hawkins, mayor of Halifax; K. C. McLean, warden, Colchester County; D. J. Clarke, municipal clerk, Cumberland County; William Fitzgerald, mayor, Sydney; W. R. McCarthy, town solicitor, Glace Bay; A. W. Hendry, mayor, Liverpool.

CROP CONDITIONS IN THE WEST

Cutting of wheat is reported from 55 points along the lines of the Canadian Northern in Manitoba, Saskatchewan and Alberta in the report for the week ended August 17th, received at the general offices of that company. Cutting of oats is under way at 15 points, and of barley at 20. Estimates of probable yield are given in 23 cases, the figures standing for wheat, except where otherwise stated: Ste. Anne, Man., 40 to 45 bushels to the acre; Giroux, Man., 20; Decker, Man., 20; Odessa, Sask., 12, oats 35; Vibank, Sask., 15, oats 35, barley, 20; Parkman, Sask., 15; Lampman, Sask., 10-12; Brooking, Sask., 12; Truax, Sask., 15; Briercrest, Sask., 15; Star City, Sask., 28; Weldon, Sask., 30; Lumsden, Sask., 15; Zealandia, Sask., 15; Carmel, Sask., 15; Borden, Sask., 20; Swanson, Sask., 10; Ardath, Sask., 10; Forgan, Sask., 10; Laird, Sask., 10; Krydor, Sask., 20-25; Munson, Alta., 15; Rockyford, Alta., 15-25 bushels.

The optimism that is now more general in Western Canada is reflected in the reports of some 30 Canadian Northern Railway agents, that considerable improvement is apparent in the crops in their section.

A later report, dated the 29th inst., says: "Canadian Northern crop report covering territory served by its lines in Manitoba, Saskatchewan and Alberta for the week ended August 24th shows, out of 214 places reporting, 108 cutting wheat, 11 oats and 20 barley. A number of points report cutting delayed on account of rain. Twenty-six agents report the crop in their sections as considerably improved over previous estimates.

Agents from the following points, not previously announced, estimate the yields in their districts as follows: St. Norbert, Man., wheat, 25 bushels to the acre, oats 30-35, and barley 30-35; St. Jean, Man., wheat 25, and barley 45; Letellier, Man., wheat 20-25, and barley 30-40; Belmont, Man., 30-40; Warren, Man., wheat 15-20, and barley 30; Mitchelton, Sask., 10-12; Ettington, Sask., 18-20; Condie, Sask., 20; Fiske, Sask., 8; Howell, Sask., 15-18; Ruddell, Sask., 10; Blaine Lake, Sask., 25; Dinsmore, Sask., 10; Benton, Alta., 10 bushels.

The Actuarial Society of America will hold its fall meeting in Montreal, as guests of the Sun Life Assurance Company. The meeting is scheduled for Thursday and Friday, October 10 and 11.

THE FIRE HAZARD

Each Municipality Should Be Made Responsible for Losses Resulting From Its Own Negligence

BY HENRY LYE.

We should not postpone to the dim, distant future the action necessary to the diminution of the losses of life and property by fire, the alarming extent of which are brought to our notice by the monthly and annual reports; this work is not the duty of the insurance companies, although they have done a great deal in this direction. There are many causes of fires, each one requiring special treatment. The most prevalent is smoking, but the most self-apparent is from frame rows of buildings which cause the spreading of fires into conflagrations. Taking as tests the workmen's compensation act, the mutual insurance companies, the Victory war bonds, the tag-days and other co-operatives, we are justified in considering the national balance-sheet as the test of national and local responsibilities.

As to frame rows with their co-imposing dangers, we are led to consider whether it is best to suffer the dangers and losses arising from present conditions or by prompt and vigorous action to abate them. We may reasonably require that every community bear its own losses and expenses, and so be influenced to purge itself of manifest dangers.

The ordinary growth of a village, with its ambitions as a future town or city, begins with a tavern, a general store and a blacksmith's shop, all built of wood on small lots. The intervening spaces are gradually filled with frame buildings occupied as stores, dwellings, stables and sheds. All these gradually fall into decay, disuse, misuse, and so become nuisances and dangers which discourage the erection of substantial buildings. These conditions are suffered to continue by a false theory of vested rights and the ignoring of responsibilities, although no one has any right to imperil another's life or property.

Reverting to the idea of community rights and responsibilities, it is obvious that if Canada is big enough to afford light and air and safety to its people, then there should be such open spaces as may be necessary to these ends. Therefore, each community should be required to eliminate such erections as endanger, not only their locality, but the whole community. And this action should be at the expense of the community thus relieved from co-operative dangers to life and property, but which, being suffered to continue, may furnish headlines to the newspapers covering the tidings that such a village or town or a large part of a city has been "wiped out."

This abatement of fire hazard, with its claims and compensations, can only be efficiently dealt with by governmental action, which should no longer be deferred and should long ago have been brought about by the Commission of Conservation.

BRITISH COLUMBIA SALMON SHORTAGE

That the total pack of sockeye salmon by canneries operating on the Fraser River this year will not amount to more than 25,000 cases is the pessimistic opinion expressed by Mr. Monk, of the Glenrose cannery, and chairman of the fisheries committee of the New Westminster Board of Trade. This is the lowest pack on record, the previous low mark being in 1916, when the Fraser River pack totalled 48,000 cases.

There are practically no sockeyes in the Fraser at present. From 25 fishing boats on the North Arm of the Fraser, Mr. Monk received 40 fish, and other canneries report an equally small catch. The only hope of the fishing industry this year is that fall fishing may prove good. An occasional cohoe salmon is now being caught.

As a result of the poor sockeye run on the Fraser, canneries are paying a record price for sockeyes, 75 cents each.

Tentative plans for the erection of a new cold storage plant in Prince Rupert have been drawn and the building of a locally-owned plant is not far distant, according to present intentions. It probably will be located at Cow Bay, where a site is available. The building planned is to be two stories, large enough to take care of a million pounds of fish, with capacity for freezing fifty tons of ice and storage for 450 tons

Joint Life Underwriters' Convention

Life Insurance has Played an Important Part in the War — Heavy Burden Imposed upon the Companies—Prominent Speakers before Meetings in New York

NEARLY 2,000 delegates from all over the North American Continent met in New York City on Wednesday, Thursday and Friday, the 4th, 5th and 6th of September, at the life underwriters' convention. This is the first joint conference of the two national bodies, the National Association of Life Underwriters of the United States, and the Life Underwriters' Association of Canada. Topics of general interest to the life insurance business were discussed and more particularly the relation of life insurance activity to war conditions. On Tuesday evening executive meetings were held and considerable routine business was gone through. On Wednesday morning, at 10 o'clock, the convention was called to order by President L. Priddy, of the National Association of Life Underwriters. A word of welcome was given by Mr. O. S. Rogers, president of the Life Underwriters' Association of New York. This was replied to by President Wilson, of the Life Underwriters' Association of Canada, and by President Priddy, of the National Association of Life Underwriters.

H. C. COX,

President and General Manager, Canada Life Assurance Company, Toronto, whose address before the Life Underwriters' Convention appears on another page of this issue.

At the afternoon session held in the grand ball room of the hotel, Clarence Ousley, assistant secretary of agriculture, who spoke in place of President Wilson, read a letter from the chief executive, in which the president expressed his regret at being unable to attend the convention, but stated that he had sent Mr. Ousley to represent him.

Appeal for Man-power.

Mr. Ousley made an appeal to the business interests of the United States for every ounce of man-power they could spare to the farms and essential industries, declaring that this country had not contributed as heavily of its man-power as had Great Britain in the early years of the war. He called for a peace of unconditional surrender as the only kind of peace acceptable to the people of the United States.

"England has contributed one-fourth of man-power, and at the same time increased her agricultural establishment," Mr. Ausley said. "Canada has increased her production in spite of her heavy gifts to the fighting lines. The United States faces the same necessity."

Hugh Guthrie, solicitor-general of Canada, who said he bore "greetings from the government of which I am a member," described Canada's efforts in the war, and gave it as his belief that the people of the United States would be called upon to make great sacrifices before the war ended. Dr. George E. Vincent, president of the Rockefeller Foundation, aroused the enthusiasm of the convention in an address in which he discussed the relation of life insurance to health.

(The Monetary Times Photo.)

T. B. MACAULAY,

President, Sun Life Assurance Company of Canada, whose address before the Life Underwriters' Convention appears on another page of this issue.

Tax arrears of the municipality of South Vancouver, as found by a recent audit, are now $883,885, of which $527,915 have been hypothecated to Messrs. Spitzer, Rorick and Company, of Toledo, Ohio, as security for a loan of $450,000 payable in March, 1920. Considerable collections have, however, been made on this account and depreciations were also found in the values of the school buildings and equipment.

A large attendance is reported at the Quebec Provincial Exhibition, which was held in Quebec City from August 29th to September 7th.

GUARDING OUR ECONOMIC FUTURE

The dread of government control of industry, which has been so characteristic of English and North American economic life for the past century, is not a haphazard theory, but is based upon fundamental economic views. The rapid advance of government action into the economic sphere which has taken place during the past four years does not, as might at first be supposed, indicate a revision of these views. What is does show is that opinion has become more elastic, and extraordinary control of industry in war time is freely admitted as being necessary and advisable.

What of the future? Will the control of industry be only partially withdrawn, or will the present orgy of regulation be followed by a reaction in the opposite direction? In the United Kingdom, where freedom of private enterprise long held sway, it is recognized that the old relations between the State and industry can never be resumed, but at the same time both popular and official opinion are not in favor of the maintenance of direct government operation. As industry develops, and is organized on a national basis, regulation is essential, but regulation is a relation in which the State acts as an arbitrator between an industry and the public which it serves, and not as an actual party to the contract.

In the United States, the new situation is regarded as temporary only. A recent statement of Mr. Otto H. Kahn, the well-known New York banker, quoted in "Trust Companies," for August, expresses well the opinion of most Americans who have devoted thought to the subject:—

"It is to be hoped that the paternalistic control of enterprise and industry, which is a necessary measure in war time, will not be permitted in our country to grow into a permanent feature of our governmental system, and that as soon as possible the fetters now placed upon private initiative and personal incentive will be removed and the genius of American individual enterprise set free again, with due regard, be it understood, for the welfare and opportunities of the masses of the people and for the duty of the State to protect those least able to protect themselves and to prevent exploitation or oppression, undue privilege and unfair practices."

In our own country, certain branches of control are admittedly temporary, such as the fixing of prices, and the regulations of the Canada Food Board. But in some other departments, such as railroads, we have taken steps which cannot be retraced. In the United States, the government merely guaranteed the railroad stockholders a certain interest return upon their investment, in exchange for the control of operations during the war period. When this relation is terminated, no permanent change in the economic condition of the roads will have resulted, at least from this cause alone. In Canada, however, one national road has been purchased as the direct result of the war, and if the Grand Trunk deal is completed there will remain only one national road in private hands. Similarly, both in the United States and in Canada the governments have entered upon a programme of shipbuilding. There is, however, no surrender of the principle of the rights of private enterprise, provided that enterprise is subject to the control of the governments.

A STANDARD OF SERVICE

The fact that employees of governments and municipalities usually work under special conditions has always been a point of difficulty in settling labor questions. These special conditions take the form of pensions or retiring allowances, special working hours, holidays, etc. Almost invariably the government conditions are more favorable than those prevailing in private institutions with the result that where the remuneration is the same, the government positions are the most desirable. Quite

Frequently, however, the wage scale is less, and a balance is arrived at in this way.

Hon. Dr. MacLean, minister of education for British Columbia, was recently called upon to consider the question in the case of the employees of the provincial printing office, which comes under his department. The employees requested an increase in wages, pointing out that their remuneration was below the regular union scale. The minister, however, refused any change on the grounds that the employees affected were working from five to nine hours per week less than employees of commercial enterprises engaged in similar work. He stated that he would be in favor of placing the government's work in this department upon a strictly commercial basis and paying the union scale. Otherwise, he said, an additional financial burden would be added to the province.

The minister is quite right in his view that work of this kind should be carried on with methods similar to those employed by private companies; otherwise there are always labor difficulties over the comparative advantages of the two classes of employment. When a government or municipality engages in work which is usually performed through private sources it must observe the conditions of private enterprise or be unsuccessful.

This applies not only to the question of remuneration but also to office hours, etc.; and where the government comes into contact with the public, it should offer just as good service as could be rendered by private enterprise. One of the worst blights on public ownership has always been that government and municipal departments are notorious for their inefficiency. This has been the result of a number of causes, some of which are permanent, but all of which may be removed if the reforms are sufficiently radical. The Civil Service Commission of the Dominion of Canada has done good work in maintaining a standard of competence among government employees, and its authority has recently been greatly extended. But the commission has no control over the management of any department, nor should it have. This responsibility rests with the minister at its head, but in reality the deputy minister, who represents the continuity of the department, is more familiar with the conditions. That a government department can be operated with a fair degree of efficiency has already been demonstrated, but there is still a large field for extension of the principle.

CONSTRUCTIVE WORK IN FIRE PREVENTION

During the past year we have heard much lamentation over Canada's great fire loss; but it is only quite recently that positive steps in the direction of fire prevention have been taken. It is a new field of public work, and it is well, therefore, that we go slowly, lest we become hampered with a multiplicity of regulations, issued by different authorities, and clogging the healthy development of economic and social life. The work so far accomplished has been for the most part an examination of the causes of fires, and of the conditions which promote fire waste; it is only by studying the germs that we will be able to eradicate this disease which has permeated our economic life. Once the causes of fire waste have been classified in the order of their importance, fire prevention becomes a simpler matter.

On August 30th, a convention was held in Toronto of representatives from all over Ontario, and a fire prevention league formed. At the same time the annual convention of the Dominion Fire Chiefs' Association had just been completed in the same city, and the Ontario municipal convention was also being held. From a study of the discussions which took place at these meetings it becomes apparent that it is municipal responsibility that is emphasized, and that the initiative for fire prevention must proceed from the municipalities. The most that the provinces or the Dominion can do is to co-ordinate local action. It is evident that the necessary co-operation requires the formation of some organization of municipalities, or of local associations formed for the specific purpose of fire prevention.

But the root of the movement must go even deeper than the municipalities. Action must proceed from the public itself, and the public can be aroused to action only by a course of systematic education. It appears that carelessness is the most fertile cause of fire loss, and carelessness is an individual disease which requires an individual cure. The fire departments of Canadian cities and towns are admitted to be among the best in the world, and their insufficiency in the prevention of fire waste has become only too evident. The eradication of the original causes will reduce the waste, and perhaps make possible a reduction in the expense of fire protection.

Something can also be done through the medium of municipal by-laws, towards removing fire hazards, that is those conditions which cause a fire to become a conflagration. Government action in this direction must be permissive, municipal action positive, because regulations cannot be framed which would satisfactorily cover the varied conditions which exist throughout any of the Canadian provinces.

OAK BAY DECIDES NOT TO SPEND

At a recent meeting of the council of Oak Bay municipality, B.C., the erection of a new school at the Willows was considered. The proposals were for a building to cost $45,000, of which $15,000 would be provided by the province. Taking into consideration the present excessive costs of construction, the council decided to postpone the work. They had been negotiating with the school board regarding a temporary structure to cost $10,000 or $15,000, but the latter body would not consider this.

MURRAY-KAY TO BE REORGANIZED

In order to bring $250,000 fresh capital into the company, the reorganization of Murray-Kay, Limited, is planned and arrangements have been practically completed to that end.

It is proposed that the common stock of the old company be wiped out and that the preferred stock be reduced to 50 per cent. of its present value. The common stock outstanding amounts to $1,500,000 and the preferred to the same figure, a total of $3,000,000. The $1,500,000 of preferred would be reduced to $750,000 and there would be a new issue of preferred of $250,000 to be sold at par with a bonus of two shares of common for each share purchased, thus absorbing a new issue of $500,000 of common, which would go to those putting in new capital and giving them the voting control.

It is understood that Richard P. Gough, president of Sellers-Gough, Limited, and of Jas. A. Ogilvy, Limited, Montreal, also vice-president of the Home Bank of Canada, is to be president of the reorganized Murray-Kay Company, and it is tentatively understood also that the syndicate which Mr. Gough is heading will obtain enough of this stock to give control.

Winnipeg is to have a new $1,000,000 stock company. Letters patent have been issued to "Clements Loan and Investment Company, Limited," to carry on the business of a general loan and investment company. The president of the new corporation will be John Richard Clements and the incorporators include Louis Ray Clements, Charles Herbert Clements and Alexander McLeod.

ADDRESS:

THE MANAGER, BOND DEPARTMENT,
TORONTO 62

CANADA AT WAR

Part of an Address at the Hotel Astor, New York, Before Banquet of Delegates at the International Convention of Life Underwriters

BY T. B. MACAULAY,

President, Sun Life Assurance Company of Canada.

It is indeed an honour that I, as a Canadian, should be invited to speak on the subject of Canada's experience and achievements in the war before such a gathering as this, composed principally of citizens of the great United States, you friends of whom we in Canada like to think of as our Allies, you whom we have long been in the habit of calling our cousins, but whom we can now feel we can call our brothers. And yet I feel a diffidence in attempting to address you on such a subject. The work which the United States has undertaken in connection with the war is so vast, and the spirit in which it is being carried out is so magnificent and so enthusiastic, that what we have accomplished must of necessity appear rather small in comparison. You of the United States are to have the honour and glory of being to a large extent the deciding factor in bringing this terrible war to a happy conclusion, and of turning what might possibly have been a drawn battle into a glorious victory. The efforts which you are putting forth are the delight and admiration of your allies, and the dismay of Germany and the Kaiser. I wish to express my enthusiastic appreciation of all that you are doing and are planning to do in the future. We Canadians are delighted at the manner in which you have taken up your task. Your achievements in France have already begun. The story of Chateau Thiery has stirred all our hearts, and this is but the beginning. There will be many Chateau Thierys within the next twelve months or I am greatly mistaken. The help you have given far exceeds the men and munitions you have furnished, great and valuable though they are, for you have put new heart and vigor and sureness of victory into the French and British troops, who had begun to be a little war-weary and stale after four years of struggle.

After four years of hostilities, when the war is now gradually nearing its close, it is difficult to place ourselves in thought back to the early days when the great German military machine, which had been preparing for forty years, was crashing through Belgium and Northern France. The sky was clouded and the outlook dark; the brave men of France and Britain were being overwhelmed by superior numbers; we had few guns to answer the German artillery, and ammunition was so short that many of our guns were restricted to five rounds a day—it was at that time and under those circumstances that Canada had the privilege, on account of our British connection, of getting into the fray, and we all feel a joy and pride that we were able to do something, even though but little, to help stay the Hun in those gloomy days.

At the beginning of August, 1914, we were not only unprepared for war, but had so long breathed the atmosphere of peace, that we were unable at first to realize the importance of what had happened, and the magnitude of the crisis into which the world had been plunged. As to our duty, there was no doubt. From the Atlantic to the Pacific we felt that it was both our duty and our privilege to put our whole weight into the struggle, side by side with the Mother Country. But what were we able to do? In what way could we help? As for military organization, we had practically none. We had 60,000 militia, but they had had little training, and had taken their duties lightly. Bernhardi had said that in the event of a European war Britain's Dominions and colonies could be completely ignored. As for financial help, we had been a borrowing country, and how could we begin to lend?

But our national spirit rose to the needs of the occasion. Our people quietly determined to do their best. The call went out for 25,000 volunteers to go overseas, and, thanks largely to the energy of Sir Sam Hughes, within a few months we had sent off not 25,000 but 33,000. Within two months of the outbreak of war, some of our troops who had been hardened in South Africa were fighting in France, and within seven months even our green troops were on the field engaged in a life and death struggle with the Huns—and holding them! Further detachments were despatched as quickly as they could be raised and drilled, until we now have a total of over 550,000 enlistments, and will soon have 600,000, and of these about 450,000 are already in Europe. Every month is adding to the number. We have promised that we will send over not less than 500,000, and we propose to keep that promise.

Canadian Losses Have Been Heavy.

Our enlistments, including those secured under the Military Service Act, already number about one in thirteen of our population. In the same proportion the figures for the United States would be around 8,000,000, which is about the number you are preparing to raise.

We began with voluntary enlistments, but, just as in the Mother Country, we had to come ultimately to the draft system. You have profited by our experience, and have very wisely adopted the draft system from the beginning. We fully agree with you that this is the only right and fair method, and that it is besides vastly more efficient and more economical.

And how about the casualties? In the early days of the war, when we were short of artillery, and even of rifles, and were unprepared for poison gas, we suffered heavily. Up to June 30th of this year we had 27,040 killed in action, 9,280 died of wounds, 2,257 died of disease, 4,342 presumed dead, and 384 missing. This makes a total of 43,303 deaths.

In other words, of the total number who had gone overseas up to June 30th last, 11.3 per cent. were already dead. In addition there were 113,007 wounded and 2,774 prisoners, or 115,781 altogether, so that in addition to the deaths, 30.2 per cent. had been wounded or made prisoners. It is a comfort to know that between 30,000 and 40,000 of the wounded were ultimately able to return to the firing line.

The total casualties were 41.5 per cent. of the number who had gone overseas. But even this does not tell the full story. Most of those who had but recently gone across had, of course, not been long exposed, and the casualties were chiefly among those who had gone over early. Among them the casualties were tremendous. Those noble fellows paid a terrible price, and I can assure you that among them were many who were the very cream of the Canadian nation.

Financing the War.

Now let us turn to finance. We are a young and borrowing country; we have been an extravagant country; and we thought we could do little towards financing the war. At the beginning the Mother Country advanced money to the various Dominions at the same rate as she herself had to pay, but by 1915 we began to rely on ourselves. The government issued the call for the first domestic loan. They asked for $50,000,000, and wondered if they would get it. The subscriptions came to over $113,000,000. On the strong urgency of the larger subscribers the government took $100,000,000 of this amount. In September, 1916, they asked for $100,000,000, and we offered them $201,000,000. Six months later, in March, 1917, they asked for $150,000,000, and we offered them $254,000,000. In November of the same year they asked for yet another $150,000,000, and we offered them $419,000,000. For this loan the government had reserved the right to accept all subscriptions, and they did take $400,000,000. If in 1915 a man had told us that within the next two years the people of Canada would supply the government with $750,000,000, or $100 for every man, woman and child in the country, he would have been looked on as a wild visionary. People do not know what they can do until they really try, and we surprised ourselves.

The subscribers to our first loan numbered 24,800; to the last loan they numbered 820,000, or nearly one in nine of the population. And now our government is about to ask for $300,000,000 more, and I shall be surprised if the answer is not at least $500,000,000, and I imagine that they will take it all. We shall have a heavy debt, but what of that? We shall carry it with ease, for we are young and growing, and our shoulders are broad. Canada never was so strong or so prosperous as at this moment. The safest government bonds in the world are those of the United States and Canada, and I bracket them together as regards security. We pay 5½ per cent. on ours, so if any of you want higher interest with equal security, subscribe for the next Canadian war loan.

Not merely have we raised these large amounts of government loans, but we have kept up the price of our bond issues, so that every person who bought a Canadian Victory bond can to-day get for it on the spot more than it cost him. The brokerage and bond houses of the Dominion have been organized into a great committee, and whenever any bond is offered for sale it is at once resold to other purchasers. The de-

mand for bonds has been stimulated until it now exceeds the supply, and the market price is above the cost price. Our government can borrow this year on slightly better terms than we had to give last year. That speaks for itself for the value of the bonds and the credit and wealth of the country.

In addition to paying for the upkeep of our own troops, Canada has granted war credits to the Imperial government of $532,000,000, with which to purchase foodstuffs, munitions, etc., in the Dominion. Our banks have loaned the Imperial government $200,000,000 more. But despite the withdrawal for government loans, the deposits in our banks are $300,000,000 more than they were at the beginning of the war. The country never was so wealthy. Prior to the war we lived too easy a life, and our municipalities and corporations borrowed freely in Britain. When the British markets were closed we turned to the United States. Of our provincial and municipal securities sold in 1916, 85 per cent. went to the United States. Of similar securities sold in 1917, only 2½ per cent. went to the United States. Our expenditures for war purposes have now risen to about a billion dollars. A considerable amount of this has been raised from taxes. There has been a tremendous increase in the national revenue. But the way in which this extra money has been raised, and the kind of taxes which have been imposed, would, I am sure, not be interesting. You know all about that sort of thing in your own country. Perhaps I had better say the details would be interesting but not pleasant.

But more than men and money were required. There was a pressing need for munitions with which to meet the German hordes. Canada had never been a great manufacturing country. But again we surprised ourselves, for we have already supplied 60,000,000 shells, which I have no doubt have done good work. We have furnished munitions to the value of $1,000,000,000, and will soon have furnished another $200,000,000 worth. We are helping in shipbuilding, too, for we expect to turn out this year about 500,000 tons of new shipping, about two-thirds of steel and one of wood. I understand that this will about equal one-fourth of the output of the British shipbuilding yards for the year 1917. In aircraft, too, we are trying to do our share. We are turning out about 350 aeroplanes per month. The total to date is about 2,500. Besides that we are manning them.

But it has not been all men, money and munitions. Our people have responded gloriously to all appeals for the relief of suffering. For our Canadian Patriotic Fund, which looks after the wives, children and dependants of our men at the front, we have already given $44,000,000. For every $2 the government has asked from the people it has generally been given three. To the Red Cross the contributions have been $12,000,000 in cash and $15,000,000 in supplies. Of the cash contribution $7,000,000 were spent by the British Red Cross, and the balance by the Canadian Red Cross. According to a newspaper item which I saw the other day Canada leads all the nations of the world in Red Cross contributions per capita. To the Belgian Relief Fund we have contributed over $1,500,000 in cash, and an equal amount in supplies, while $8,000,000 more went to French, Serbian and Polish relief funds, and numerous other charitable and patriotic associations. For military work by the Y.M.C.A. the contributions have been $4,500,000. In addition to the donations from the public, the Dominion and provincial governments have given $5,250,000 for charitable work through the Imperial government. In all, the relief contributions from Canada amount to $90,000,000, or over $12 for every man, woman and child in the Dominion.

Our educational leaders have also organized the Khaki University for educating the men at the front, and fitting them for their return to civilian life, and our government has undertaken its support. This idea has now been copied in Britain, France, and I believe even in Germany. It had birth in the brain of Dr. H. M. Tory, president of the University of Alberta, brother of Mr. John A. Tory, of Toronto, whom you all know. Dr. Tory has entire charge of the work on the other side.

To summarize what we have done in finance. We have paid about one billion dollars for war expenditures, and have raised $750,000,000 of this amount by domestic loans. We are asked to raise another $[illegible]00,000,000 next month for further expenditures, and I feel sure we will offer $500,000,000. We have given a credit of over $500,000,000 to the Imperial government for purchase of munitions and supplies, and our banks have given a further amount for the same purposes of $200,000,000. We have supplied 60,000,000 shells, one billion dollars worth of munitions, and will soon deliver $200,000,000 worth more. We will, besides, this year add 500,000 tons of shipping, and are making 350 aeroplanes per month, having already completed 2,500, and in addition to all this we have contributed $90,000,000 to relief work.

And now I have given you a brief summary of some of the things that have been done in Canada during the last four years. If at times I may have been carried away by my enthusiasm, and have spoken with less restraint than a Canadian should use when speaking of his own country, please forgive me. I have tried to tell nothing but plain unadorned facts, and as for enthusiasm, remember that without enthusiasm, people can accomplish little. You have the right to be proud and enthusiastic over the great work which you are doing, so be lenient with us.

Heavy Burden on Life Companies.

But in this great drama which has been played in Canada during the last four years, what part has been taken by the life companies and life men?

It is the business of life assurance to relieve distress caused by death. I have often referred to our profession as philanthrophy reduced to a business basis. Never was life assurance so needed before. The claims resulting from the war which fell upon the united companies doing business in Canada, came to nearly $12,500,000 to the close of 1917, and they are now probably at least $15,000,000. No payments can ever make up for the noble men who have given their lives, but the distribution of this large amount must at least have softened the blow to their dependants. In 1915 the war claims amounted to 16 per cent. of the total claims on the Canadian business of the united companies; in 1916 to 29 per cent., and in 1917 to 33 per cent. of the total claims. Most, if not all, of the companies allowed their old policyholders to engage in military service without the payment of any extra premium, and a close estimate is that on only 29 per cent. of the claims which fell in was any extra received; 71 per cent. of these war claims being on policies which brought to the companies no compensating extra premium whatever.

While manufacturers, merchants and banks have enjoyed prosperity as a result of war activities, the life companies have had to sustain heavy losses, due to conditions such as were never contemplated by their mortality tables. But grandly have they stood the strain. The test has but demonstrated their strength, and they have come out of it in a way that none of us would have believed possible. In every instance the companies have sustained this extra mortality without any weakening of their position.

And the companies have done much more than merely pay death claims. It is no exaggeration to say that they have been of immense assistance to the government in floating the various war loans. The small premiums collected through the country from hundreds of thousands of policyholders, were combined into company subscriptions amounting to millions. The total subscriptions of the life companies to the various domestic government loans already exceed $112,000,000. Omitting the banks, the subscriptions of no other class of corporation or section of the community have come anywhere near this large amount. To have been able to place such a sum of money at the disposal of the government in its time of need, is an achievement of which every life man in Canada may be proud. And these subscriptions were worth more than the mere money they represented for they did much to give an immediate assurance of success to the issues, and at the same time stimulated others to subscribe. The life assurance companies were, in fact, looked on as leaders in these loan campaigns. And in regard to the loan which will be brought out next month, I feel quite sure that the companies will vie with each other as to which can subscribe most, and their leadership will be even more marked.

But what about our life men? As might have been expected, they have been in the thick of it all. In finance, while the head office officials have been straining to take as large subscriptions as possible, the life underwriters in the field have been among the most prominent and successful workers for the placing of the bonds with the general public. In military matters the Montreal district is in charge of General E. W. Wilson, who, in private life, is the provincial manager of the Canada Life, while the Toronto district was, until his tragic and lamented death in the performance of his duties, in charge of Colonel W. C. Macdonald, managing director of the Confederation Life. And over in France, the commander in chief of the Canadian armies, a man who has led Canadian troops from the very commencement of the war, is Sir Arthur Currie, the man who has never known

defeat. General Currie is another insurance man and hails from Vancouver, B.C.

You have listened to my brief story of some of the things that have been done. But after all, those things belong to the past—they are written in history, and are now mere records and memories. Nothing that we can now do can change them, and the future, which we have the power to change, is therefore more interesting and more important. The war is not yet over, and the manner of its ending rests largely with us on this continent. In our outlook on the future we are now, thank God, united as allies, allies who are working together heart and soul. We realize that tremendous efforts are yet required of us, and I should like again to express my admiration of the magnificent work which you of the United States are doing. If we in Canada can but keep pace with you, we shall be satisfied. We shall at least try.

My last word is a vision which I and other Canadians note with joy is already in the first stages of realization. I see the United States and the British Empire, the two great branches of the English-speaking world, going down through the centuries arm-in-arm, co-operating as brothers, each helping the other, each strengthening the other, and unitedly blessing the world, and making it safe for democracy. The Germans have succeeded in unifying the Anglo-Saxon world.

SOUTH VANCOUVER BALANCE IS REVERSED

The auditors who examined the accounts of the municipality of South Vancouver as at December 31st, 1917, reported a considerable surplus of assets. Since that time, however, a commissioner has been appointed by the provincial government to look after the affairs of the municipality, in the person of Mr. F. J. Gillespie. Auditors who have made an investigation under his direction report that as at April 30th, 1918, the municipality had a deficit of $1,340,752.

This is accounted for in several ways. In the first place, some of the sinking fund had been invested in local mortgages with interest at 5 and 6 per cent. The auditors considered that these were depreciated in value to the amount of $32,093. The payments which should have been made into the sinking fund during the years 1915, 1916 and 1917 have not been made.

EAGLE, STAR & BRITISH DOMINIONS INSURANCE

Total assets of $66,618,780 are now held by the Eagle, Star and British Dominions Insurance Company, Limited. The growth of this company has been the result, not only of internal development and competent management, but also is accounted for by the purchase of a number of other strong companies.

For the year ended December 31st, 1917, premium income in the life department amounted to over $4,500,000. At the beginning of the year the amount of the life insurance and annuity fund was just about $50,000,000. By the end of the year it had increased to $50,300,000. In addition to the premium income the interest rents and dividends less income tax amounted to over $1,800,000. The revenue in the marine department totalled $14,500,000, of which practically $10,000,000 consisted of premiums and interest on investments. The funds in this department showed an increase during the year of $1,500,000. In the fire and general revenue account, the total income was $3,[illegible], and the funds increased by almost 50 per cent. to $1,250,000.

The investments of the company are well distributed being placed in the United Kingdom, the British Colonies, India, the United States and other foreign countries. They include government, provincial and municipal securities and railway and corporation stocks and bonds.

A few weeks ago, it will be remembered, the company added to its business by purchasing the British Crown Assurance Corporation, Limited. This company had at the end of the year assets totalling $[illegible]17,[illegible]77. A very considerable part of its business is done in Canada, and at the last annual meeting the chairman especially referred to the work that had been done here by their Canadian manager, Mr. J. H. Riddel. Mr. Riddel will have charge of the Canadian business of the amalgamated companies.

PERSONAL NOTES

Sir Herbert Ames was recently in British Columbia organizing a campaign for war funds.

Mr. E. Hay, general manager of the Imperial Bank of Canada, has returned to Toronto, after a trip of inspection to the Western Provinces.

Mr. John D. Ryan, president and director of the Anaconda Copper Mining Company, has resigned to devote all his time to the service of the government as director of Air Service.

Lord Southborough, of London, England, has been elected a director of the Grand Trunk Railway Company in place of the late Colonel Frederick Firebrace. Lord Southborough is widely known in Canada and the United States as an authority on railroad problems.

Sir Lomer Gouin, K.C.M.G., premier of the province of Quebec, has been elected by the court of the directors of the Royal Exchange Assurance, a member of their Canadian board. The Montreal directors of this old English company, which was incorporated by Royal Charter, A.D., 1720, are Sir Vincent Meredith, Bart., president of the Bank of Montreal, and H. B. Mackenzie, Esq., general manager of the Bank of British North America.

Major Clarence N. McCuaig was recently elected a member of the Montreal Stock Exchange. Major McCuaig went overseas four years ago with the 13th Battalion, 5th Royal Highlanders of Canada, with his two brothers. He has returned to Canada to assist his father, who has been carrying on the business of McCuaig Brothers and Company alone since his three sons, and Captain Gerald Lees, another partner, who was killed at the battle of Ypres, went overseas. Major McCuaig is now on the reserve list of officers, C.E.F.

RAILWAY PASSENGERS ASSURANCE COMPANY

This old and strong insurance company reports successful business for the year ended December 31st, 1917. The total revenue for the year was $4,115,605, of which $2,384,385 consisted of premiums and most of the rest remaining from the previous year. The expenses were as follows:—

Payments on policies	$ 933,475
Commission	350,735
Expenses of management	490,675
Amount of funds at end of year	1,770,665
Balance to profit and loss account	570,055
	$4,115,605

There is now in the profit and loss account a balance of $1,025,565, as compared with $1,510,050 at the beginning of 1917. In addition to the amount of $570,055 derived from the revenue account, there was also over $100,000 of interest and dividends not carried to the revenue account. Provision was made for bad debts, income tax and depreciation of investments. Dividends required $127,500. The total assets shown in the balance sheet are now $4,028,025, the largest single item being British government securities and the second the loan on stocks and shares. Other investments are well distributed.

This company is the oldest accident company in the work, having originally been formed to insure railway passengers against railway accidents. This was in 1849 when the railway was a comparatively new affair. Since then the company's business has expanded to other lines of insurance including general accident, guarantee, motor car, plate glass and burglary. Its Canadian business has been well developed since it entered the field here in 1902 under the management of Mr. Frank H. Russell, who has been in charge during this whole period.

Almost 150 delegates attended the convention of the $100,000 club of the New York Life Insurance Company's western department, which was held in Victoria recently. An excellent programme, including addresses of interest to the business, was provided.

VITAL STATISTICS IN CANADA*

Uniform Data to be Gathered by Provinces With Dominion Assistance

BY R. H. COATS.
Statistician, Dominion of Canada, Bureau of Statistics.

It is unnecessary to emphasize the importance of vital statistics for Canada. Not only are they necessary in preventing crime and in facilitating the transfer of property, but they lie at the basis of public sanitation and afford a measure of national efficiency from the most important standpoint of all, namely, the biological. As this bureau has been the prime mover in calling the present conference, a brief statement of its point of view and a summary of past history and of present conditions in Canada may be of service.

Vital statistics are a part of the scheme of population statistics, or demography, which is perhaps the leading subject with which this bureau has to deal. Two kinds of records are required in almost every accounting system: First, a periodical stock-taking, and, second, a day-to-day record of transactions. In population statistics, the stock-taking is, of course, the decennial census; the day-to-day part consists of two records: first, migration into and from the country, and, second, the natural increase or decrease through birth and deaths within the country; i.e., vital statistics.

This bureau accordingly comes to the problem of vital statistics from two distinct angles. In the first place, we take the census. Now, the merchant who takes stock relates that process carefully to his day-books and ledgers, and so ought the census to relate its broad decennial inquiry to the needs and objects of vital statistics. Secondly, though the day to day recording of vital statistics is done by the provinces (civil rights, the protection of which is an important object of vital statistics, being assigned to the provinces by the British North America Act), this bureau is also specifically instructed to compile vital statistics annually, doubtless in appreciation of the fact that such statistics are necessary for dealing with certain national problems—immigration, for example—and also that vital statistics even from the purely local standpoint must, if they are to be of real value, rest on the broadest possible basis. Side by side with this mandate, goes another in our act which implies that the bureau ought to avoid setting up independent machinery for vital statistics, but should work through the provinces. At any rate, the machinery for so doing is provided.

Handicapped by Lack of Uniformity.

Now, up to the present this bureau has found it quite impossible to fulfil either of these functions properly. The reason lies in the provincial situation. One province has no vital statistics. In the others, legislation and methods differ often in the widest way. For example, the statistical year is not uniform; the international classification of deaths is not universally followed; and each province has its own scheme for the collection, compilation and presentation of these statistics. Take the highly important matter of the form of death certificate as an instance. Of the 24 items which such a certificate usually covers two of the provinces omit 16, another 15, another 13, whilst the lowest number of omissions is 3, and this does not include other items of the 24 which differ in what they call for.

Administration is of first importance in vital statistics. The best legislation in the world will yield statistics that are worse than useless, if it is not administered efficiently. Now, standards of administration differ as between province and province—and from time to time in the same province. I might instance a rather remarkable increase in the birth rate in a certain province recently, the explanation of which lies, not in any gain in reproductive force among the population, but in the energy with which the province in question has addressed itself to securing better registration. The gain, accordingly, is in departmental efficiency and it is a very fine thing, but it is disconcerting to have the news of it given out in the form of a rise of the birth rate. It will easily be seen that unless methods, as well as legislation, are standardized, no combination of vital statistics is possible. Accordingly, though this bureau has made an annual practice of bringing together the more recent provincial vital statistics, we have always, for the above reasons, prefaced the figures with a note that they must not be made the basis of any calculation of mean birth or death rate, which signifies, being interpreted, that we are without true vital statistics.

The same factor has militated against careful delimitation of questions in the decennial census. Under a proper scheme, while the local authorities keep account of births and deaths from day to day, there are certain data of first-rate interest to vital statistics which the census can obtain more readily. The census has not always obtained these data, but we can plead in extenuation that it is hard to relate the census inquiry to a system of vital statistics when the latter does not exist.

Previous Attempts Have Been Abandoned.

Two interesting attempts to improve matters may be briefly mentioned. Thirty-five years ago the Dominion government instituted a plan for compiling the annual mortuary statistics of cities of 25,000 and over, by subsidizing local boards of health to supply the information under special regulations. A beginning was made with the five cities of Montreal, Toronto, Hamilton, Halifax, and St. John; by 1891 the list had grown to twenty-five. This was in the days when the only records of birth and deaths were those of the municipalities. With the organization of provincial bureaus of vital statistics, the Dominion work was abandoned. Its demise, however, was soon after marked by a significant incident, namely, a conference of Dominion and Provincial officials summoned by Hon. A. R. Angers in 1893, which passed a resolution calling upon the provincial and federal authorities to co-operate in the work of collecting, compiling and publishing the vital statistics of the Dominion. That resolution has lain a long time dormant—exactly a quarter of a century—but we may hope to-day that its slumber is at length to be disturbed.

The other attempt to meet the situation was made through the medium of the census. The framers of the original Census Act seem to have thought that they might bridge the chasm in so far as mortuary statistics are concerned by instructing the office, when taking the census, to ascertain the number and causes of the deaths occurring in each household during the preceding year. But the results were not happy. It is a fundamental rule of census-taking that you should not ask questions involving the use of memory or of scientific knowledge. The reason is obvious. Most of the people are not scientifically minded, and neither are the eight or ten thousand enumerators that the census must employ at $2 or $3 a day to make its inquiry. In actual experience it was found that our enumerators missed twenty per cent. of the deaths. (Incidentally we found that we got a good number that the local records missed). The cause may be set down to migration of population, lapse of memory or knowledge in the person supplying the information, and the difficulty of guarding against careless enumeration. Moreover, the information we did obtain was unsatisfactory, especially in the all-important matter of the cause of death. Even had the results been otherwise, mortality statistics at ten-year intervals are of comparatively little use. Moreover, we need birth rates and marriage rates only less insistently than death rates. The inability to get accurate and reliable vital statistics through the decennial census has been recognized in the United States, France and Germany for many years, and it is high time that we ceased so abortive an undertaking here.

Vital Statistics Must be on Broad Basis.

Now what is the remedy? It lies, we think, in taking up the matter where it was left by the conference of 1893 and in framing a plan for permanent Dominion and provincial co-operation. In this it has seemed a natural part for the bureau to take the first step. We have no right, as we have no inclination, to say to any province how it shall conduct its affairs. But vital statistics are scarcely on that footing. As already said, their value, in relation to perhaps their most important ends, lies almost wholly in the breadth of the basis on which they rest, and a province which does its work in a watertight compartment is losing half the results. In fact, the basis of vital statistics is not even national. At the close of the war, an Imperial conference on statistics is to be held.

in which an inter-Imperial system of vital statistics is one of the items for discussion. Canada will, of course, be represented at that conference. It goes without saying also that we should be able to compare notes with the United States in such a matter. In fact, vital statistics are international in scope and interest.

What this bureau has done in taking up the matter is, I think, known to all present. First we drew up a memorandum to which was attached a model bill, model forms of registration and model regulations for procedure in detail; and also a model order-in-council to govern Dominion procedure,—all based on thorough examination of vital statistical legislation and administration in Canada and in other countries. This memorandum we laid in an informal way, more than a year ago, before the provincial departments, from several of whom valuable criticisms and suggestions were received. In the light of these we have recast the matter, and the present conference is with the view that we may agree upon its final form.

Dominion to Provide Uniformity.

Briefly, the plan, as we have sketched it out, involves that each province bring its legislation and administration up to a standard to be agreed upon, the Dominion Bureau engaging to act as intermediary agent for the maintenance of the standard and to furnish the machinery for centralization and compilation of the resulting statistics. With regard to the additional facilities and economies which co-operation in compilation work alone can effect, the possibilities are very great. The census will also, of course, ensure that the supplementary decennial data shall be obtained in the proper manner. By the above, it is not meant that any province must cast its system in an iron mould or surrender individuality. The standard is a minimum standard, pure and simple. This is the plan which has been adopted in Australia and the United States, two countries whose federal forms of government and whose social institutions approximate closely to our own.

Our meeting to-day consists of representatives who will approach the subject of vital statistics from, we hope, every possible angle. In addition to the representatives of the Provincial Vital Statistical Bureaus, who, with the representatives of the Dominion Bureau of Statistics, may be called the principals in the conference, we have with us the Dominion Department of Immigration, the enlargement of whose records and their co-ordination with the general subject of Canadian demography is urgently called for, and the Department of Insurance which makes an exceedingly practical use of vital statistics—namely, the biometrical. We have also the Dominion Pensions Board and the Commission of Conservation, each of which has an important point of view. The American Society of Actuaries has kindly consented to send a committee. The public health aspect is represented both incidentally in the above and by a delegate from the Canadian Medical Association. The Union of Canadian Municipalities and the Municipal Improvement League are also present. Finally, we have been so fortunate as to obtain the attendance of Dr. Davis, Chief of the Division on Vital Statistics of the United States Bureau of the Census. We had contemplated inviting a representative from Newfoundland, on the happy precedent established by Australia when New Zealand was included in the conference which brought the Australasian scheme of vital statistics into existence, but the exceptional circumstances of the past year prevented. This we shall hope to remedy.

The agenda we submit for your consideration consists of four main items, arranged to facilitate constructive discussion. First, we should like to establish the principle that vital statistics must be collected by the method of continuous registration and that the census cease its decennial mortuary investigation. Secondly, we would affirm the general principle of Provincial and Dominion co-operation under a scheme of uniform legislation and administration by the provinces and co-ordination by the Dominion. Thirdly and fourthly, we should like to proceed to a detailed discussion of possible procedure by the Provincial and Dominion governments respectively to achieve this result.

When we have accomplished the above, or something to the same end, we shall have formulated what this conference set out to formulate, namely, a scheme of vital statistics for Canada. This, we may be sure, will receive sympathetic consideration at the hands of the governments concerned. The present situation must not be allowed to continue. So long as it does, we are among the backward nations. In Canada, at the present moment, public health problems cannot be satisfactorily studied. Immigration is one of the largest factors in our national development, but what immigration really means to Canada must, without vital statistics, remain a sealed book. We are at present engaged in the greatest war of all time, and we are without fundamental knowledge of our man-power and how it is to be conserved and built up, though we are fighting an adversary who measures such matters to a nicety. I feel confident that to-day will prove the beginning of the end of this, and that our conference will prove to be the first step towards a comprehensive and scientifically conceived scheme of Canadian vital statistics.

FOOD COMMODITIES IN CANADA

Increase in Holdings of Butter, Beef and Lamb—Large Stocks of Mutton on Hand

The statement for the total amount of food commodities in storage, August 1st, 1918, as compiled by the Cost of Living Branch of the Department of Labor, is made out for a somewhat different classification of commodities than formerly shown. This statement shows the total stocks physically on hand at the premises of all the storages reporting. This includes certain supplies of food owned by the British Ministry of Food and temporarily stored in Canada awaiting shipment. Unfortunately, for the sake of comparison with last year, there is not a complete record of all the stock on hand in all the storages in the Dominion on August 1st, 1917. The department is, however, able to give a comparison between the quantities held in the premises of the largest companies this year and the stocks owned by these same companies last year, which present the fairest possible comparison with conditions a year ago. By the month of December of this year a complete comparison with the corresponding month of the preceding year will be ready. The comparison between July 1st and August 1st for this year is for the total stocks physically on hand in all the warehouses reporting, and is accordingly a stock comparison.

Increase in Butter and Cheese Stocks.

In the case of butter, a greater quantity on hand at the first of August than on the first day of July is found. This is natural in itself, owing to the fact that this is the season of the year in which next winter's supplies are being laid by, but there are greater stocks on hand this August than August of last year. This surplus is already being forcibly driven into the hands of the allied buyers by action of the Canada Food Board since August 1st.

In the case of cheese, there is somewhat more on hand at the first of August than the first of July, owing to this being the season of production, but there is very much less on hand this August than there was the preceding August, the figures showing less than one-half this year of the stocks of last year. The shipments have been kept up closer this year than last by the allied buyers, owing to the fact that freight conditions are better.

While the stocks of eggs have increased over last month, as is natural at this season of the year, all the comparative data at hand indicate 15 per cent. less on hand this year than at the same date last year, probably because consumption is greater and possibly because of the slight decrease in production.

Decrease in Pork Stocks.

In the case of pork, the department is able so far to give a comparison only for all kinds of pork produce taken together. The data here show a slight decrease as compared with last month, and 26.76 per cent. less than at the corresponding date last year. Over 15,000,000 pounds of the quantity reported are still in the process of cure. The supply of hogs coming into the markets in Canada up to the present time has not been so great this year as was anticipated.

The stocks of fowl on hand are so small as to be almost negligible. The stocks of mutton and lamb show a very decided increase on last year. Since there is no export of mutton and lamb to the Allies, these stocks should be immediately available for domestic consumption.

In the case of fish, there is slightly less than a month ago, but still large holdings. The comparison with last year

VISITORS WELCOME TO OUR SAFETY VAULTS

Dairy	1,714,691	pounds
Cheese	10,805,946	pounds
Eggs—In cold storage	11,370,775	dozens
Not in cold storage	467,083	dozens
Frozen	1,250,314	pounds
Oleomargarine	460,361	pounds
Pork—Frozen	9,617,285	pounds
Not frozen	2,431,260	pounds
Dry salted	4,633,778	pounds
Sweet pickled	8,950,126	pounds
In process of cure	15,665,622	pounds
Beef—Frozen	12,253,303	pounds
Not frozen	3,575,151	pounds
Cured	345,931	pounds
In process of cure	369,279	pounds
Mutton and lamb—Not frozen	95,509	pounds
Frozen	3,727,018	pounds
Fowl—Chicken	107,839	pounds
Poultry	96,189	pounds
Fish—All kinds	16,289,873	pounds
For bait	1,182,087	pounds

Comparison of Holdings.

The following is a statement comparing holdings on August 1st, 1918, with August 1st, 1917, taken from such limited lists of firms as the records for last year allow:—

Commodity.	1917.	1918.	Inc. or dec. Per cent.
Butter, pounds	10,977,514	13,435,861	+ 22.39
Cheese, pounds	16,590,539	7,018,720	— 57.70
Eggs, dozens	7,862,293	6,672,975	— 15.13
Pork, pounds	45,853,758	33,587,486	— 26.76
Beef, pounds	6,274,643	10,875,245	+ 77.33
Mutton and lamb, pounds	338,045	939,552	+ 177.93
Fowl, pounds	1,198,930	66,231	— 94.48
Fish, pounds	3,787,728	6,605,875	— 74.40

The following is a comparison of holdings of July 1st, 1918, with August 1st, 1918:—

Commodity	July 1st	Aug. 1st	Inc. or dec. Per cent.
Butter, pounds	9,477,906	20,251,286	+ 113.66
Cheese, pounds	9,283,310	10,865,946	+ 17.04
Eggs, dozens	10,410,407	12,677,401	+ 21.79
Beef, pounds	10,877,736	16,543,664	+ 52.08
Pork, pounds	42,844,479	41,298,071	— 3.61
Mutton and lamb, pounds	826,461	3,822,527	+ 362.51
Fish, all kinds, pounds	22,471,406	17,471,060	— 22.25
Fowl, all kinds, pounds	417,082	204,028	— 51.09

ONTARIO BULK SALES ACT

Important Legislation Provides for Protection of Creditors Against Debtor's Sale of Stock en Bloc

It is now necessary for Ontario merchants, who desire to dispose of their stock-in-trade, or any part of same, en bloc, or out of the usual course of trade, to comply with the provisions of the Bulk Sales Act. Briefly the act provides as follows:—

Statement of Liabilities to be Supplied to Purchaser.

The purchaser, before paying any money or giving any notes or securities on account of the purchase price (excepting a sum not exceeding $50, which may be paid to bind the deal), must obtain from the vendor a written statement, verified by affidavit, giving the names and addresses of all the creditors of the vendor and stating the amount owing to each. It is the duty of the vendor to furnish this statement to the purchaser. Unless the foregoing provision is complied with, the sale is void and the stock is liable to seizure under execution by creditors of the vendor, unless all of the creditors are paid in full out of the proceeds of the sale.

Provisions of Act May be Waived by Consent of Creditors.

Upon obtaining such statement a waiver of the provisions of the act, from creditors, representing 60 per cent. in number and value of claims of $50 and over, as shown by the statement, may be obtained and delivered to the purchaser. If this is done the purchaser is safe to complete the sale, and is free from responsibility to the creditors of the vendor.

Purchase Moneys to be Deposited with Trustee for Distribution

Should it be decided not to ask the consent of creditors, or should the consent of the requisite number of creditors not be obtained, then the purchaser, for his own protection, must deposit the purchase moneys, notes or securities with a trustee for the purpose of distribution on a pro rata basis (subject to any legal preferences) amongst the creditors of the vendor. The costs and charges of such distribution are deducted from the amount of money to be received by the creditors, so that this procedure does not impose any expense on either the vendor or the purchaser. The balance remaining in the hands of the trustee after paying the claims of the creditors is turned over to the vendor.

After the statement has been obtained, should either of the foregoing provisions not be complied with, the sale is void and the stock is liable to seizure under execution of creditors of the vendor, unless all of the creditors are paid in full.

Appointment of Trustee.

The vendor may appoint as trustee anyone of his own choosing, provided the person so appointed lodges a bond, satisfactory to the judge of the county or district court of the county or district in which the stock is located at the time of the sale, by way of security with the clerk of the county or district court. The giving of a bond may be waived, provided the trustee appointed is satisfactory to creditors holding claims of not less than 50 per cent. in value of the liabilities as shown on the statement.

Unnecessary to Comply With Act if Creditors are Paid.

It will be noted that it is unnecessary to comply with the provisions of the act provided the creditors are paid in full, and in many instances the intending purchaser may be satisfied to complete the purchase without referring to creditors or depositing the funds with a trustee. There can be no objection to this, provided the purchaser is willing to assume the responsibility of the vendor settling his liabilities out of the proceeds of the sale, but if he does not do so, the purchaser is liable.

NATIONALE FIRE INSURANCE COMPANY

The Nationale Fire Insurance Company of Paris has moved its Canadian head office into new premises at 142 Notre Dame Street, Montreal, formerly occupied by the Union Bank, and later by the Montreal Trust Company. In the same offices will be the Fire Insurance Company of Canada. Both of these companies are under the management of Mr. J. E. Clement.

Estate Administration Is a Business in Itself

When you are considering with yourself the naming of an individual or a Trust Company as the Executor of your Will and Trustee of your Estate, do not forget this vital distinction:

> With most individuals, trusteeship is but ***a side issue*** for which they may not have time or special qualification.
>
> Administering Wills and managing Estates is ***the business*** of a Trust Company, for which it has been specially organized and is fully equipped.

To secure this wide and varied experience and businesslike methods, it costs but a moderate fee—small in comparison with the results your Estate obtains.

See us before you name your Executor

AUGUST FIRE LOSSES

Loss for First Eight Months of 1918 is Greater Than in Any Previous Year

The Monetary Times' estimate of Canada's fire loss during August, 1918, is $3,110,445, compared with the July loss of $3,369,684 and $1,230,183 for August, 1917. The following is the estimate of the August losses:—

Fires exceeding $10,000	$2,646,000
Small fires reported	56,125
Estimate for unreported fires	408,320
Total	$3,110,445

The Monetary Times' record of the past three years and this year to date, shows the following monthly losses:—

	1915.	1916.	1917.	1918.
January	$ 1,249,886	$ 1,649,217	$ 1,918,660	$ 2,688,556
February	1,019,556	3,275,600	2,009,953	2,243,762
March	1,632,096	1,406,501	2,050,650	1,682,286
April	1,463,747	1,460,437	1,317,714	3,240,187
May	881,855	1,850,205	1,163,110	3,570,014
June	1,157,156	494,557	1,184,627	3,080,982
July	773,869	3,039,634	1,101,734	3,369,684
August	403,693	1,057,109	1,230,183	3,110,445
September	1,116,109	981,703	1,301,700	....
October	1,290,325	1,077,815	704,005	....
November	1,087,980	923,235	959,049	....
December	1,595,255	3,271,496	5,144,100	....
Totals	$13,671,527	$20,487,509	$20,086,085	$22,985,916

The fires reported in August at which the losses amounted to $10,000 and over were:—

Brantford, Ont., August 7, the Waddell preserving plant, $10,000.

Cobalt, Ont., August 4, aerial tramway and four stores, $40,000.

Elmira, Ont., August 6, the O'Donnell Hotel and several adjacent buildings, $35,000

London, Ont., August 2, Cowan Hardware Company's store, $10,000.

Montreal, Que., August 5, plant of the Montreal Biscuit Company, $500,000.

Maidstone Crossing, Ont., August 9, barn and contents of J Collins, $10,000.

Montreal, Que., August 12, two hay sheds and several hundred tons of hay of the City Ice Company, and W. H. Dwyer and Company, $20,000.

Plattsville, Ont., August 8, barns and contents of R. Hewitt, $11,000.

St. Catharines, Ont., August 12, plant of the Canadian Warren Axe and Tool Company, $25,000.

London, Ont., August 14, National Bowling Alleys, Penman's Hosiery Factory and the Scotland Woolen Mills, $150,000.

Ottawa, Ont., August 15, freight sheds near the Central Station and 28 freight cars, $100,000

Almonte, Ont., August 27, flannel mill of Wm. Thoburn, $100,000.

Hamilton, Ont., August 26, shops of the Toronto, Hamilton and Buffalo Railway, $10,000.

Montreal, Que., August 26, premises of the Metal Shingle and Siding Company, Limited, $75,000.

Montreal, Que., August 26, oil tanker "Lake Manitoba," of the C P R Steamship Company, and contents of the Imperial Oil Company, Limited, $1,000,000.

Owen Sound, Ont., August 28, drygoods store of Wm T. Lee and Sons, $35,000.

Stanley, N.B., August 24, mill of S. Douglass Stanley, $20,000.

St Laurent, Que., August 24, hay sheds, offices and stables of O. Crevier, $20,000.

Britanna Bay, Ont., August 30, club house of the Britannia Boat Club, $45,000.

Sault Ste Marie, Ont., August 29, Eddy Brothers' lumber yards, $200,000.

Brantford, Ont., August 29, tenement house on Oxford Street, $11,000.

Montreal, Que., August 27, bakery of J. S. Brousseau, $125,000.

Montreal, Que., August 27, sash and door factory of H. Chagnon and Company, $94,000.

Destroyed or Damaged.

Among the structures damaged or destroyed last month were: Plants, 5; residences, 10; barns, 15; stables, 6; stores, 9; aerial tramway, 1; vacant building, 1; hotels, 2; business buildings, 3; flannel mill, 1; freight sheds, 2; railway shop, 1; oil tanker, 1; bakeries, 2; mill, 1; haysheds, 3; grain elevator, 1; race track buildings, 1; business blocks, 2; railway station, 1; factory, 1; skating rink, 1; shingle mill, 1; warehouse, 1; lumber yard, 1; tenement house, 1; club house, 1.

Among the causes reported last month were: Lightning, 8; incendiarism, 4; defective stove, 2; spark from thrashing machine, 2; defective chimney, 1; explosion of dynamite, 1; explosion of oil stove, 1; explosion of oil feeder, 1; blowing out of electric fuse, 1; spark from passing engine, 1; short circuit, 1; defective flue, 1; spontaneous combustion, 1.

Total of Fatalities Small.

The following is a list of fires at which fatalities occurred last month:—

Toronto, Ont., Aug. 5	Fire from cigarette lighter	1
Dundas, Ont., Aug. 8	Playing with matches	1
London, Ont., Aug. 18	Trapped in burning house	1
Toronto, Ont., Aug. 19	Explosion of steam pipe	1
Brantford, Ont., Aug. 20	Clothing catching fire	1

GOVERNMENT CONTROLS STEEL INDUSTRY

The government, through the War Trade Board, took over the control of steel production in Canada on the 3rd inst. The board is vested with full authority to give directions to the different companies as to the extent and character of their product, taking into consideration the facilities of each concern. By the order-in-Council which is being passed, the board's powers will be extensive in the supervision and direction of steel production and manufacture in Canada. It does not refer, however, to the financial or general management of the concerns. The object is to co-ordinate the producing power so as to ensure the greatest efficiency as well as the maximum of production.

The measure has become necessary owing to the shortage of steel in the United States, due to the great and constantly increasing demand for war purposes. This, it is explained, makes it imperative that the greatest possible economy in production be exercised along with co-operation by the different companies.

The War Trade Board will co-operate with producers to bring about the proper measures, and it has authority to enforce such orders as it may deem necessary. Each steel plant will be assigned a certain kind of work.

Basic as well as war industries in Canada have need of supplies, and they must, to the extent of our ability, be provided in Canada owing to the tremendous demands upon the American steel industry.

AUDITORS' CERTIFICATE AND REPORT.

We have audited the Balance Sheet of the Company dated 31st December, 1917, as above set forth, and have obtained all the information and explanations we have required.

The Assets and Liabilities appearing in the Balance Sheet include those which constitute the Funds representing the security of the Policy Holders of the Eagle Insurance Company, the Star Assurance Society, Limited, of the Sceptre Life Association. Our Audit does not embrace those Funds which have been certified and reported upon by their respective Auditors.

With the exception of a few of the securities deposited in foreign countries, with regard to which, owing to war conditions, confirmation has not been obtainable, we have satisfied ourselves that the Investments and Cash Balances, as at 31st December, 1917, were either in the Company's possession or deposited as security. The Stock Exchange Securities, which are shown in the Balance Sheet at cost, have been valued as at 31st December, 1917, by the Company's Brokers, and the depreciation disclosed by such valuation is more than covered by the amount of the Investment Reserve Fund.

We report that, subject to the above observations, we are of opinion that the Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs according to the best of our information and the explanations given us and as shown by the books of the Company.

131, FINSBURY PAVEMENT HOUSE, E.C. 2,
11th May, 1918.

AUDITORS' REPORT AND CERTIFICATE.

To the Shareholders of the Canadian Locomotive Company, Limited, Kingston, Ontario:—

In accordance with Section 94B of The Companies Act Amendment Act 1917 (Dominion) we report to the Shareholders of the Canadian Locomotive Company, Limited, that we have examined the books and accounts for the year ended 30th June, 1918, and that we have obtained all the information and explanations we have required.

We hereby certify that the above Balance Sheet at 30th June, 1918, is, in our opinion, properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs at 30th June, 1918, according to the best of our information and the explanations given to us, and as shown by the books of the Company at that date.

GEORGE A. TOUCHE & COMPANY,
Chartered Accountants, Auditors.

Toronto, 21st August, 1918.

To the Shareholders.

Your Directors submit herewith statement of Assets and Liabilities and Profit and Loss Account as at the 30th June, 1918.

Profit from operations for year ended 30th June, 1918, after charging Business Profits War Tax and all other charges except Bond Interest and Depreciation		$ 669,916.18
Add:		
Interest from Investments		8,020.84
		$ 677,937.02
Deduct:		
Interest on First Mortgage Bonds	$ 90,000.00	
Provision for Special Replacements	25,000.00	

Provision for Depreciation....		100,000.00	
			215,000.00
			$ 462,937.02
Add: Adjusted Balance at credit 1st July, 1917, brought forward			706,479.98
			$1,169,417.00
Balance appropriated as under:—			
Sinking Fund provision		$ 15,000.00	
Dividends for year:—			
On Preference Shares, Nos. 23 to 26 inclusive..	$105,000.00		
On Common Shares, Nos. 1 to 4 inclusive	120,000.00		
		225,000.00	
			240,000.00
Balance at credit 30th June, 1918, carried forward, per Balance Sheet			$ 929,417.00

We have taken the sum of $125,000 from our Profits and added $100,000 to Depreciation Reserve Account, and $25,000 for Special Replacement Account, both being the same appropriations in amount as in the previous year.

Following the precedent of reviewing the profits year by year commenced in 1917, we again repeat it:—

For the year ending 30th June, 1912	$	326,380.43
" " " " " " 1913		396,886.02
" " " " " " 1914		342,057.25
" " " " " " 1915		134,613.89
" " " " " " 1916		574,211.78
" " " " " " 1917		721,254.90
" " " " " " 1918		677,937.02

which, you will observe, makes an aggregate sum of .... $3,173,341.29 or an average net earning of $453,334.47 per annum.

Again we have to record our appreciation of the loyalty shown us by our employees, who have supported the efforts of our management in the most satisfactory manner.

The prospects for the coming year are of the brightest. We have contracts in hand that will keep our shops fully occupied for many months to come, all taken at satisfactory prices, and unless something occurs in the matter of supplies, material, or something unforeseen, our next year's statement should be as satisfactory.

Yours faithfully,

ÆMILIUS JARVIS,

Chairman of the Board.

MUNICIPAL BOND SALES

Messrs. Wood, Gundy and Company, of Toronto, have been awarded a block of $390,900 5 per cent. 10-year Greater Winnipeg Water District bonds. This block is a separate issue by itself and not of the $4,000,000 stock as reported in our monthly record.

Bonds to the amount of $7,500 of Sandwich, Ont., have been sold to Messrs. C. H. Burgess and Company, of Toronto. They bear interest at the rate of 6 per cent., and are payable in 20 annual instalments. The proceeds will be used for school purposes.

A syndicate comprising Rene T. Leclerc and Messrs. Versailles, Vidricaire, Boulais, Limited, of Montreal, has purchased through the Banque d'Hochelaga, $2,300,000 city of Montreal 6 per cent. bonds, due 1923, at 96.40 and accrued interest to date of delivery of bonds to be taken up before January 1st next

---

The savings bank section of the American Bankers' Association will hold its 44th annual convention at the Congress Hotel, Chicago, from September 23rd to 28th, 1918. Attention will be directed to the different classes of securities in which savings banks are interested, such as railroad securities, public utilities, etc., and also general topics regarding the relation of savings banks in the United States to war activity.

NEW INCORPORATIONS

The Coalmont Collieries, Limited, With Capital of $3,000,000, Received Charter

The largest company incorporated during the past week was the Coalmont Collieries, Limited, with a capital stock of $3,000,000, and head office in Vancouver, B.C.

The following is a partial list of charters granted during the past week in Canada. The head office of the company is situated in the town or city mentioned at the beginning of each paragraph. The amount noted is the authorized capital, and the persons named are the provisional directors:—

Kitchener, Ont.—Ellis and Howard, Limited, $40,000; F. Otter Ellis, S. F. Howard, W. H. Howard.

Quebec, Que.—Cid Fire Alarm System Company, Limited, $90,000; C. J. Cid, A. Leclerc, W. Amyot.

St. Catharines, Ont.—Newman Brothers, Limited, $100,000, J. H. Ingersoll, F. E. Hetherington, H. L. Cummings.

Lorettville, Que.—Quebec Oil and Grease Company, Limited, $20,000; M. S. Smith, J. W. Mackenzie, F. X. Godbout.

Three Rivers, Que.—Riverside Manufacturing Company, Limited, $450,000, J. Bureau, P. Bigue, C. Lebrun. Baptist, Cloutier and Pothier, Limited, $49,900; M. E. G. Baptist, A. Cloutier, R. Pothier

Winnipeg, Man.—Clements Loan and Investment Company, Limited, $1,000,000; J. R. Clements, L. R. Clements, B. L. Hamilton. Trick-Guest Shoe Company, Limited, $20,000, C. S. Trick, S. C. Guest.

Vancouver, B.C.—Latimer and Sons, Limited, $25,000. Ward's Agencies, Limited, $20,000. Consolidated Petroleum Company, Limited, $10,000. British Columbia Importers, Limited, $20,000. Perfecto Gear Differential Company of British Columbia, Limited, $25,000. Standard Motors, Limited, $15,000. Coalmont Collieries, Limited, $3,000,000. Atlas British Columbia Timber Company, Limited, $20,000. Sea-to-Table Fish Company, Limited $25,000.

Toronto, Ont.—Authors and Cox, Limited, $50,000; T. A. Rowan, V. H. Hattin, G. Bradford. Novelty Lace and Veiling Company, Limited, $100,000; M. A. Teller, M. J. Teller, W. J. Holford. Orsiny Construction Company, Limited, $40,000; O. A. Newman, E. Orsiny, G. Bradford. United Auto Sales, Limited, $100,000; R. K. Grimshaw, M. D. Grimshaw, E. J. Swift. Western Securities Corporation, Limited, $20,000; A. L. Reid, C. H. C. Leggott, A. M. Borthwick. Containers, Limited, $150,000; E. J. Swift, J. T. Adams, E. G. Gore. Exhibitors Distributing Corporation, Limited, $[illegible]; A. Cohen, E. Marks, W. Field.

Montreal, Que.—Adanac Color Company, Limited, $20,000; J. J. Beique, P. R. Bisaillon, H. R. Bisaillon. M. Ryan and Company, Limited, $20,000; M. I. Popliger, W. Astrof, S. Hopmeyer. Maison du Bon Gout, Limited, $20,000; H. Shapiro, M. Rosen, W. Chafe. Le Placement National, Limitee, $49,550; W. Brodeur, C. Brodeur, J. N. Cabana. Parisian Shop, Inc., $20,000, R. Chenevert, L. Barry, A. Theberge. L'Agence Commerciale, Inc., $100,000; L. E. Beauregard, J. A. N. Mercier, J. H. Beauregard. British Smelting and Refining Company, Limited, $50,000; I. Levine, S. Miller, E. Hamilton. Ascania Salvage Company, Limited, $20,000; F. H. Markey, W. W. Skinner, G. G. Hyde.

The first convention of the $100,000 Producers' Organization of the Excelsior Life Insurance Company was held recently at the head office in Toronto. Statements were presented showing that in the last seven years the company had doubled its income, its assets and assurances, and more than trebled its surplus. A banquet was given to the members of the club, with managing director, Mr. E. H. Black, in the chair. Among the delegates were:—E. J. Gillespie, Vancouver; J. Kilgour, Edmonton; J. W. [illegible], Regina; Wm. Harvey and C. D. B[illegible], Winnipeg; P. [illegible] Thomas, Saskatoon; J. H. McL[illegible], Owen Sound; Harry Finney, Bracebridge; G. T. [illegible], Ottawa; F. S. Harris, St. John; [illegible] S. H. [illegible], Halifax.

VANCOUVER IS BASIC GRAIN PORT

As a result of an order issued by the Board of Grain Supervisors at a recent meeting held in Winnipeg, Vancouver has been made a basic port in the grain business, and now has the same status in the grain world as Winnipeg, Montreal, New York, Chicago, Seattle, Portland and San Francisco. This was the news taken back to the coast by Mr. J. Hall, manager of the Vancouver Milling and Grain Company, who attended the meeting of supervisors as a representative from the Province of British Columbia.

"The immediate effect of the order," said Mr. Hall, "is the establishment of a stable market at fair prices for all the wheat grown in British Columbia, and at the same time it provides the means of accomplishing the desires of the Food Board in collecting the greatest possible portion of the British Columbia crop in order that it may be used for military purposes, which is imperative this year, owing to the short crop of the prairie provinces. It should further prove an incentive to the farmer for greater production of an improved quality of wheat. According to the order, $2.20 per bushel is to be paid for No. 1 quality of either spring or winter wheat. A further allowance of $3 per ton will be made when the grain is sacked."

OTTAWA ELECTRIC STREET RAILWAY COMPANY

The Ottawa Electric Street Railway Company has raised its passenger tariff, as at August 31, by abolishing the dollar books of tickets and substituting ticket strips containing five instead of six tickets for 25 cents, thus establishing a straight five-cent fare. No other change has been made to the tariff, the workingmen's, school children's and Sunday tickets remaining at the usual rates.

A statement published by the company informs the public that its action is due to the very high increase in the cost of materials used by the railway, and while it is not mentioned, the large increase in salaries recently granted the employees is doubtless a determining factor in the course the company has pursued.

AUGUST MUNICIPAL BOND SALES

Sales for the First Eight Months of 1918 Exceed Those of the Whole of 1917 by Over $20,000,000

The municipal bond sales in Canada during August, 1918, totalled $3,158,307, compared with $1,415,946 in July and $4,637,836 in August a year ago. The August records of municipal bond sales at home for the past eight years are as follows:—

August.	Municipal bond sales in Canada.
1911	$1,493,507
1912	1,649,547
1913	526,300
1914	411,755
1915	6,087,415
1916	852,447
1917	4,637,836
1918	3,158,307

During August there were 12 Alberta school district issues of bonds, totalling $107,000. These bonds were all of the 7 per cent. type, payable in 10, 20 and 40 years, some being instalment bonds, and the rest serials.

The Greater Winnipeg Water District issued a block of $390,900 debentures, which was the second issue of the $4,000,000 stock for which authority was granted early in May, 1918. The first block amounted to $1,000,000, and was issued last June.

Montreal Bonds Awarded.

Towards the end of the month, the prospects of an issue of $4,000,000 city of Montreal bonds was under discussion. The object of the loan was to cover the obligations of the city of Maisonneuve which has been assumed by the city of Montreal and which had to be met by September 1st.

The Bank of Hochelaga, acting on behalf of a syndicate of bond holders, offered to buy $2,300,000 city of Montreal 6 per cent. bonds, due 1923, at 96.40 per cent. and accrued interest to date of delivery, the bonds to be taken up before January 1 next. The offer was made to the Bank of Montreal as bankers of the city, and they submitted it to the commissioners, who passed a resolution accepting the offer, and engaging to make no further public issue of bonds until January 1, 1919, or such prior date as the present issue may be disposed of by the syndicate.

The city also offers the Bank of Hochelaga the option of purchase of an additional $1,000,000 worth of bonds at the same price until January next, reserving the right to dispose of the remainder of the $4,000,000 loan, which is $700,000 in settlement of the current debts of Maisonneuve, after March 1 next.

The commissioners resolved to turn the temporary loan of $3,300,000 and $700,000, which were floated in anticipation of a long-term loan for these amounts, into a five-year loan, dating from September 1, the interest of 6 per cent. being payable half-yearly at the Bank of Montreal.

The amount of $2,300,000 included in the following record, is the amount reported sold in August. The balance of the loan will be included in the September sales.

Details of August Sales.

The following are the details of the August sales:—

Alberta.

Municipality	Rate	Term (years)	Amount
School District	7	10 & 20	$ 45,000
School District	7	10, 20 & 40	62,000
Sedgewick	6	10	7,000
Edmonton (rural)	7	10	21,200
			$ 135,200

Manitoba.

Municipality	Rate	Term (years)	Amount

SASKATCHEWAN FIRE PREVENTION ACT

An Address Read Before the Dominion Fire Chiefs' Convention in Toronto

BY ARTHUR E. FISHER,
Fire Commissioner for Saskatchewan.

The Province of Saskatchewan was one of the first provinces to place on its statute books an act relating to the prevention and suppression of fires, the act having been passed in 1912. In substance it was practically a reproduction of the old Manitoba act and dealt almost entirely with the reporting and investigation of fires that might occur within the province. Under its provisions a fire commissioner could be appointed, his duties being stated in the enactment. In 1913 a fire commissioner was appointed and the administration of the act was commenced.

During the following two years the fire commissioner's work comprised almost entirely the investigation of fires that seemed to be of a suspicious origin. Very little attention was paid to the prevention of fires, the act being administered by one man who of necessity could not devote much time to this all important phase of the fire commissioner's office.

In 1915 the government of the Province of Saskatchewan decided that the work of the fire commissioner's office and that of the superintendent of insurance was closely connected and accordingly arrangements were made for the uniting of the two offices under the name of the insurance department. It was decided that more attention should be paid to the question of fire prevention rather than to the investigation of fires, which decision necessitated the preparation of a new fire prevention act. In 1916 a new act relating to the prevention and suppression of fires was passed by the legislature, the measure coming into force on June 1st, 1916, and it is under the provisions of this latter act that the fire prevention work in the Province of Saskatchewan is being carried on at the present time.

The act in its opening sections deals with the appointment of certain officials, namely:—The fire commissioner, a deputy fire commissioner, an inspector and such other officers and clerks as may be decided necessary for properly carrying out the provisions of the act. One of the most important sections is section 5 and as this would undoubtedly interest the association I am quoting it.

"5. The chief of the fire department of every city, town and village in which a fire department is established, and the mayor of any town or the overseer of any village where no fire department exists, and the secretary-treasurer of each rural municipality, shall be by virtue of his office a local assistant to the fire commissioner and subject to his directions in carrying out the provisions hereof within the limits of his jurisdiction, and shall also perform such other duties as may be imposed upon him in connection with the prevention of fire or inspection of buildings by the by-laws of the municipality."

Thus you see local assistants to the fire commissioner are appointed in every place, and it will be noted in reading the act that they have practically all the powers granted the fire commissioner himself, except the investigation of fires under oath and the consideration of appeals against orders which may have been issued relative to the remedying of conditions. In other words a local assistant has not only got the advantage of local by-laws to assist him in his work of fire prevention and inspection but also the powers granted him under the provincial act. This is certainly a great advantage to any fire chief who is active in the work of fire prevention as he has at his disposal the machinery of the provincial act if perchance the local municipal council has not adopted any by-laws relative to this important subject.

I shall now proceed to discuss with you the sub-divisions of the act and in each case will deal with the method of administration. The words "local assistant" will be used repeatedly, hence kindly remember the wording of section 5 as it is the key to their identity.

Broadly speaking the Saskatchewan Fire Prevention Act may be divided into five parts, namely:—(1) Officials, (2) the investigation and reporting of fires, (3) the inspection of buildings, (4) the maintenance of the office, and (5) the penalties and miscellaneous.

I have already mentioned the officials named by the act,—the fire commissioner, deputy fire commissioner, inspectors and local assistants to the fire commissioner. The fire commissioner is required to enforce all the laws of the province and regulations made thereunder relative to:—

(a) The prevention of fires;

(b) The storage, sale and use of combustibles and explosives;

(c) The installation and maintenance of automatic or other fire alarm systems and fire extinguishing equipment.

(d) The means and adequacy of exit, in case of fire, from factories, asylums, hospitals, churches, schools, halls, theatres, amphitheatres, and all other places in which numbers of persons work, live, or congregate from time to time for any purpose;

(e) The construction, maintenance and regulation of fire escapes;

(f) The suppression of arson and investigation of the cause, origin and circumstances of fire.

The deputy acts in the stead of the fire commissioner or in the absence of the latter, and when conducting an investigation has all the power and authority of the fire commissioner. The inspectors have power to enter and inspect buildings, including their contents and occupancies, and report to the fire commissioner any faulty or dangerous conditions which are especially liable to result in fire or which endanger buildings or property adjacent. The local assistants carry out the duties of the fire commissioner (except the investigation of fires under oath) and the inspectors within the limits of their jurisdiction.

Investigation of Fires.

Sections 7 to 11 of the act are as follows:—

7. The local assistants to the fire commissioner shall investigate or cause to be investigated in a general way the cause, origin and circumstances of every fire occurring within the limits of their respective jurisdictions by which property has been destroyed or damaged, with a special view of ascertaining whether such fire was the result of negligence, carelessness, accident or design.

(2) Such investigation shall be begun within three days, not including Sunday, of the occurrence of the fire. The local assistant shall, immediately after such investigation, furnish to the fire commissioner on a form to be supplied by the latter a written statement of all the facts relating to the cause and origin of the fire than can be ascertained, and such further information as may be called for by the form.

(3) The fire commissioner, his deputy and local assistants shall have authority at all times, by day or night, in the performance of the duties imposed upon them by this act or any regulation thereunder, to enter in and upon, and to examine, any building or premises where a fire has occurred, and other buildings and premises adjoining or near the same deemed necessary in connection with an investigation.

(4) There shall be paid to every local assistant of the fire commissioner the sum of fifty cents for each fire, reported by him to the satisfaction of the fire commissioner, and in the case of secretary-treasurers of rural municipalities, in addition thereto, mileage at the rate of ten cents per mile for each mile travelled to and from the place of fire. Such allowance shall be paid by the fire commissioner monthly out of the funds provided for the use of his office.

8. Each licensed fire insurance company shall furnish to the fire commissioner, on forms provided for the purpose, a statement of every fire that occurs in the province in which it is interested as insurer, showing in each case the name of the assured, his address, the location of the risk, the value of the buildings and contents, the amount of insurance carried and the amount of loss sustained. Such reports shall be filed in the office of the fire commissioner within seven days after the end of each calendar month.

(2) In case of a fire of suspicious origin, a preliminary report shall be made as soon as possible by the insuring company, showing the name of the owner, the occupant of the premises burned, their location, use and occupancy, the date of the fire, and such facts and circumstances as shall come to its knowledge tending to establish the cause or origin of the fire. Such report shall be in addition to, and not in lieu of, any report that the company may be required to make by any other law of the province.

9. The fire commissioner shall keep in his office a record of all fires occurring in the province together with all facts, statistics and circumstances, including the origin of fires,

which may be determined by the investigation, such record being at all times open to public inspection.

10. The fire commissioner or his deputy may investigate the cause, origin and circumstances of any fire by which property has been destroyed or damaged.

(2) The fire commissioner or his deputy may summon witnesses to appear before him, and may require such witnesses to give evidence orally or in writing, upon oath, or, in the case of persons entitled to affirm in civil matters, upon solemn affirmation, and to produce such documents and things as he may deem requisite to the full investigation of the matter under inquiry, and he shall have the same power to enforce the attendance of witnesses and to compel them to give evidence as is vested in any court of record in civil cases.

(3) An investigation held by or under the direction of the fire commissioner or his deputy may, in his discretion, be private, and persons, other than those required to be present by the provisions of this act, may be excluded from the place where the investigation is held.

11. If upon an investigation the fire commissioner is of the opinion that there is evidence sufficient to charge any person with the crime of arson, or an attempt to commit arson, he shall at once report to the attorney-general and furnish him with all such evidence, together with the names of witnesses and all information obtained by him.

The local assistant is required to investigate or get information on every fire occurring within the limit of his jurisdiction with a special view of ascertaining whether the fire was the result of negligence, carelessness, accident or design. This investigation is to commence within three days of its occurrence. Immediately after such investigation a report is to be sent to the fire commissioner. Authority is given the local assistant (sub-section 3 of section 7) to enter and examine any building where a fire has occurred and also other buildings adjoining deemed necessary in connection with the investigation. The local assistant is paid fifty cents for each fire reported by him to the satisfaction of the fire commissioner and in the case of secretary-treasurers of municipalities in addition mileage at the rate of ten cents per mile travelled to and from the place of fire. The investigation mentioned is of a general character and is not under oath. Every insurance company is likewise required (section 8) to furnish information regarding every fire that occurs in which they are interested by way of carrying the risk. If information should be received by the insurance company which leads it to believe that the fire is of suspicious origin a special report must forthwith be made by the company to the fire commissioner (section 8, sub-section 2).

When this information is received by the fire commissioner he may cause the particular fire to be investigated under oath. In such case the fire commissioner or his deputy may summon witnesses to appear before him, and may require such witnesses to give evidence orally or in writing, upon oath, or, in the case of persons entitled to affirm in civil matters, upon solemn affirmation, and to produce such documents and things as he may deem requisite to the full investigation of the matter under inquiry, and he has the same power to enforce the attendance of witnesses and to compel them to give evidence as is vested in any court of record in civil cases.

If as a result of the reports of the investigators the fire commissioner is of the opinion that there is sufficient evidence to charge any person with arson or attempted arson the matter is handed over to the attorney-general's department for prosecution (section 11). However, as arson is a matter of the Criminal Code of Canada there is nothing to prevent direct action being taken by either the local or provincial police forces.

In connection with the investigation of fires the local assistants as a rule are carrying out the provisions of the act satisfactorily. Very complete reports are given by them. The department does not investigate every fire, but is guided by the reports filed in determining the advisability of a more thorough investigation into the cause of any fire.

The Inspection of Buildings.

While the investigation of fires has its moral effect and consequently has a tendency to reduce fire waste yet it is through the inspection of property that the great work of fire prevention can be done. This inspection should be individual but unfortunately the superimposition of this work on the state through its fire commissioner or upon the municipality through the local assistant seems at the present time to be the only effective means until such time as a campaign of education along the lines of individual responsibility shall have borne fruit.

Sections 12 to 16, inclusive, of our act deal with this phase of the fire commissioner's work. Sections 12 and 13 are quoted:—

"12. The fire commissioner, his deputy, the inspector or local assistants, upon complaint of any person interested, or, when he or they deem it necessary without such complaint, shall inspect all buildings and premises within their jurisdiction, and for such purpose may at all reasonable hours enter into and upon any such buildings or premises.

"13. Whenever any of the said officers shall find a building or other structure, which for want of proper repair, or by reason of age and dilapidated condition or for any cause, is especially liable to fire, and which is so situated as to endanger other buildings or property therein, and whenever any such officer shall find a building or upon premises combustible or explosive material, or inflammable conditions dangerous to the safety of said buildings or premises, he shall order the same to be removed or remedied and such order shall be complied with by the owner or occupant of said buildings or premises."

Sections 14, 15 and 16 deal with appeals to the fire commissioner against orders that may have been issued whether by the officials of the fire commissioner's office or by local assistants under the authority of the act, and are consequently not quoted.

You can see at a glance the power that is given the local assistant who is active in the work of keeping his city, town or village in good shape as regards fire hazards. He is allowed to inspect buildings and premises within the limits of his jurisdiction either on his own initiative or upon complaint of any person interested. Every local assistant has in his possession an order book on which he issues the order to remedy the unsatisfactory conditions that exist on a person's property. A copy is forwarded to this office and a record is kept of the order and also a record regarding its fulfilment. A person in any of our cities, towns or villages who is anxiously safeguarding his own property may complain to the local assistant regarding the condition of his neighbor's premises. The machinery of the law is provided for this purpose and I am pleased to say that through the influence of the educational campaign that is being waged in this province many orders are being issued by our local assistants independent of the fire commissioner's office.

May I briefly outline to you the work of the Saskatchewan department along the lines of inspection?

In our department there are six inspectors available, one of whom speaks a majority of the languages of the foreign population of this country. These men visit every town and village in the province calling on the local assistant and with him, if possible, making an inspection of the business and residential portion of the town. Orders are issued if necessary, making use of the order forms. On the conclusion of the inspection a report on the form supplied is made out, a copy of which is left with the local assistant, the original being mailed to the department. When all the orders have been completed the copy left with the local assistant is returned to this office duly signed by him. In many cases no orders are issued, the owner being shown the advisability of the improving of the particular condition and at once setting about to carry out the suggestions made.

A "follow-up-order" man follows about two weeks after the visit of the inspectors to see that the orders have been duly carried out.

In order not to conflict with local municipal by-laws our inspectors in visiting a town where there are local fire prevention by-laws work in conjunction with the local official in whose hands rests the administration of the municipal by-law. Our inspectors do not visit any of the cities where there are paid chiefs as the department knows that these men are active fire preventionists and devote much of their time to the all important work of inspection.

It is not uncommon for this office to receive complaints from citizens. These are immediately acted upon either through the local assistant or by the department itself, there generally being an inspector remaining in the office for just such purposes. I may state that the storage of gasoline is the principal cause of the complaints referred to.

Section 18 of the act reads as follows:—

"18. For the purpose of maintaining the office of the fire commissioner and paying the expenses incident thereto, every company, whether upon the stock or mutual plan, trans-

acting the business of fire insurance within the meaning of the Saskatchewan Insurance Act, shall pay to the fire commissioner in the month of March in each year, in addition to taxes and fees now required by law to be paid by such company, such sum, not exceeding one-third of one per cent. of its premium receipts and assessments, less return premiums and cancellations, reckoned on the business as reported to the superintendent of insurance during the preceding calendar year, including premiums covering fire risks only on automobiles, as may be determined by the lieutenant-governor in council.

"(2) The money so received shall be deposited with the provincial treasurer as a special fund for the maintenance of said office and the expenses incident thereto.

"(3) Any portion of such fund remaining unexpended at the end of any fiscal year and not required for such maintenance shall be carried forward to the next fiscal year and the next assessment may be correspondingly reduced.

"(4) The lieutenant-governor in council may from time to time upon the recommendation of the treasury board prescribe the manner in which the accounts of the said fund shall be kept by the provincial treasurer, which said accounts shall be audited by the provincial auditor.

"(5) From persons insuring with unlicensed companies there shall be collected the same tax as is imposed on licensed companies, which amount shall also be added to such special fund.

"(6) In the year 1916 the payment required by this section may be made on or before the thirteenth day of June."

An assessment of ⅓ per cent. is levied of the premium income on the various fire companies, both stock and mutual, and the sum thus obtained is set aside as a special trust fund for the purpose of maintaining the office. The fund is not part of the general revenue of the province, but is a special fund for a special purpose under government control and audit. In addition there is an appropriation by the legislative assembly.

Penalties.

To render the act effective certain penalties have been imposed. Anyone hindering the officials in the execution of their duties under the act or who refuses or neglects to obey a summons for appearance at an investigation is liable on conviction to a penalty of not less than ten dollars and not more than fifty. Any owner or occupant of buildings or premises who fails to carry out an order for the remedying of conditions is liable on conviction to a penalty of not less than ten dollars and not more than twenty-five for each day's neglect or failure to comply with such order. The local assistant who refuses or neglects to comply with the requirements of the act is liable to a penalty of not less than ten dollars and not more than twenty.

Occasionally my inspectors have been obliged to show the property-owner these sections of the law but this is rare. My inspectors are instructed to use "moral suasion" and to show the owner the advantages to himself and the community of complying with the remedying order. This method is educational and at the same time effective. There is a commendable willingness on the part of the people of this province to improve conditions when once the necessity of such has been brought to their attention.

Briefly speaking, the Saskatchewan fire commissioner's office is performing two duties: (1) The administration of the fire prevention act; and (2) conducting a publicity campaign on the subject of fire prevention.

I have already outlined on general terms the manner of carrying out the provisions of the statute. May I dwell briefly on the other work.

Only by a campaign of publicity and by education can the carelessness of our citizens in matters of fire hazards be eliminated or at any rate reduced. If people would forget that old belief that in the case of a fire the insurance companies will pay the loss and instead remember that it is your money and mine that is paying the losses, the insurance companies simply acting as clearing houses, then a step would be taken in the right direction. Our fire losses would un[illegible] because when you touch a man's pocket [illegible] heart. It is necessary that the misconception [illegible] be removed. It is also necessary to draw the attention of the people to the ravages of the monster carelessness. [illegible] must be [illegible] and the services of the newspapers [illegible] give the subject widespread publicity.

Our Saskatchewan newspapers are certainly assisting the department in this respect. Many of our larger mercantile firms with extensive correspondence are enclosing copies of our leaflets in every letter that they send out. Many of our teachers are having talks with their pupils on the subject, a special bulletin having been issued to the teachers on the subject. All our public speakers in the greater production campaign throughout the province this year touched on the matter of fire prevention.

The call for conservation of foods, etc., involves the conservation of existing assets. Every one who is a conservationist at heart is also a fire preventionist. Consequently there is at the present time a kindly feeling on the part of the people towards the subject which makes the work of the fire commissioner's office much easier than it otherwise would be and results are being obtained in the great clean-up movement.

I am sure that every fire chief present were he to test the feeling of the citizens of his city, town or village, would find that the same feeling exists as in Saskatchewan.

PUBLICATIONS RECEIVED

Department of Marine and Fisheries, List of Shipping.—This is a register of the vessels on the registry books of the Dominion of Canada as at the 31st December, 1917.

Report of the Veterinary General of the Dominion of Canada for the year ending 31st March, 1917. This work is a branch of the Department of Agriculture, and investigates diseases of animals throughout the Dominion.

Mineral Springs of Canada, Part 2.—Issued by the Mines Branch of the Dominion Department of Mines. This volume is by R. T. Elworthy, B.Sc. Contains an analysis of the different mineral waters found in the Dominion.

Building Up Your Bank Credit.—Issued by the Alexander Hamilton Institute, New York. This little pamphlet gives concrete instances of the relation of the borrower with his banker.

Canada's War Effort for 1918.—Issued by the Director of Public Information, Ottawa. Gives brief accounts of the different departments of war work in Canada, such as military effort, naval service, finance, munitions and shipbuilding.

How Banks Serve Business.—By A. Barton Hepburn. Published by the Alexander Hamilton Institute of New York as one of their modern business lectures. Describes the functions of a bank in relation to the economic life of the country.

Ontario Department of Agriculture.—Report for 1917 Describes the work of the department of the Agricultural College, the Ontario Veterinary College, the Agricultural Societies' Branch, Livestock Branch, Institutes' Branch and Fruit Branch.

Inspector of Penitentiaries for the Dominion of Canada.—Report for the year ended 31st March, 1917. This report shows a remarkable decrease in the number of convicts, the present number being 1,604, as compared to 2,118 on the 31st March, 1916. A review is also given of the period 1867 to 1917.

Mining Operations in Quebec Province for 1917.—Issued by the Provincial Department of Colonization, Mines and Fisheries. Gives complete statistics of mineral production in the province during the year. Also describes the mining operations classified under minerals, and lists of companies in operation. Accidents are also enumerated.

Clay Resources of Southern Saskatchewan.—A report by Mr. N. B. Davis, M.A., B.Sc. Issued by the Mines Branch of the Department of Mines. In the preparation of this report field work and laboratory tests were carried on during 1915, 1916 and 1917. It is stated that the province of Saskatchewan excels in the quality and quantity of fire clays and also possesses other deposits which can be manufactured into structural clay products.

Iron, Steel and Nonferrous Products.—A complete list of base prices, differentials and extras. Published by the Penton Publishing Company of Cleveland, Ohio, in connection with the Iron Trade Review and the Daily Iron Trade and Metal Market Report. These are the prices as fixed under government supervision and the book, therefore, provides a complete catalogue of products of this kind in the United States. Price $1.00.

GOVERNMENT TO CONTROL WHEAT EXPORTS

According to a recent announcement the Canadian government has assumed control of wheat export from Canada. The price has been fixed for the crop of 1918, and will be maintained for the year. The purchase of wheat and grains for export will be thrown open to dealers and shippers as before the war, subject, however, to the supervision and control of the government. The government will guarantee the purchase of all surplus merchantable wheat raised by Canadian farmers in the year 1918 at the price already fixed.

The apportionment and distribution of wheat for Canadian mills and for export will be made under government control, as also will be the supervision and allotment of cars and lake tonnage, arrangements for lake insurance and shortages, and the mechanism for insuring the steady, speedy and effective transport of wheat from the head of the lakes to the seaboard.

THE REHABILITATION OF SILVER

Possibility of Bimetallism as a Basis of Exchange is Again Being Discussed

BY W. W. SWANSON.

The following resolution by Senator Shafroth, of Colorado, was not long ago introduced in the United States Senate:—"Resolved, that the President be authorized to appoint a commission of three members to visit the allied and neutral nations of the world with the view of making an international agreement as to the coinage of silver, subject to the approval of Congress."

This is only one straw showing the way the wind is blowing. Bimetallism, regarded as an absolutely dead issue after the presidential elections of 1896, seems destined once more to be the storm centre of financial discussion not only in the United States but in Europe as well. The London "Economist" has had, within the past two years, many communications and articles on the subject. There are quite a number of keen students of monetary problems in the United Kingdom and France who regard the establishment of bimetallism by international agreement as well within the sphere of actualities, and as one of the most momentous outcomes of the war.

It must not be forgotten that France and the other members of the Latin Monetary Union—Belgium, Italy and Greece—still make the 5-franc silver piece a full legal tender, although France ceased the free coinage of silver in 1873, and the Union in 1878. It may be remarked, in passing, that France has often taken advantage of this "limping standard" to control gold exports; paying obligations at the Bank of France in legal tender 5-franc pieces, in lieu of gold, if there appeared to be any risk that the nation's stock of gold might be reduced to the danger point. Actually, although not in general practice, France and the other countries in the Latin Union have remained on a silver basis.

As is well known, the controversy on the free coinage of silver at 16 to 1 was not settled in the United States until 1900, long after the leading nations of Europe had gone on a gold basis. It will be recalled that, under the law enacted that year, the secretary of the treasury was empowered to sell bonds for gold at any time he deemed such action advisable to maintain the country's credit on a gold basis. Under that measure, implicitly if not explicitly, United States silver certificates and all other kinds of moneys in circulation were made redeemable in gold. The actual meaning of the law has been made clear during the present war. A few weeks since authority was given to the treasury officials to dispose of the enormous supplies of silver on hand, which at one time—previous to 1896—were regarded as the value behind the paper silver certificates and treasury notes in circulation. Thus, both in theory and practice, the United States now is indubitably on a gold basis.

There is not the slightest possibility, therefore, that the Republic will ever again, alone, attempt to put a bimetallic policy and programme into effect. Even senators and members from the silver-producing and agricultural states realize that those who still advocate bimetallism know that it can be adopted and made practicable only under an international agreement.

Mr. Bryan has on more than one occasion expressed himself as fully satisfied with the monetary situation in the United States, in view of the phenomenal rise in prices during the period 1900-1914. In the former year began the unprecedented increase in the world's stock of gold, amounting since that period to an average of between $450,000,000 and $500,000,000 per annum. The output of the Rand far surpasses the famous Australian, Californian and Yukon "strikes," and differs also from them in this essential respect, that gold mining in South Africa has been put upon a commercial basis. While the vast increase in the world's supply of the yellow metal has been only one of the factors making for high prices, it has nevertheless been fundamental in the situation.

High prices favor the debtor and injure the creditor class. Agriculture has benefited far more than manufacturing through the increase in the cost of commodities. It is self-evident that labor and capital costs are vitally important items in manufacturing, and that manufacturers are much more concerned with stabilized prices of their products than with speculative gains. The fortuitous gains that accrue from speculative price fluctuations are generally more than offset by losses on contracts for future deliveries. What modern business needs and demands more than anything else is, indeed, the elimination of speculation and risk from the productive process.

There are those who still believe that bimetallism will make for price stability and the elimination of price fluctuations. At present market prices of silver, its ratio to gold is about 22.6 to 1. It is proposed that Europe and the United States begin to freely coin silver at that ratio when prices, as measured by standard index numbers, begin to fall. The argument is based on the assumption that prices are ultimately determined by the relation between the volume of money and credit in use, and the exchanges to be effected between products.

Bimetallism is not sound in theory, nor will it work in practice. Innumerable forces are operative in determining prices, as well as money and credit. Moreover, not all the governmental edicts in the world can keep gold and silver at a fixed exchange ratio. Not the fiat of government, but economic law determines the value of silver and of gold. The nations, all of them, at one time or another, have shown the folly and danger of attempting to fix the value of money by law. Silver will undoubtedly come more largely into use for subsidiary coinage purposes; but gold must remain the standard of value for the money and credit of the world.

COBALT ORE SHIPMENTS

The following is a statement of the shipments of ore in pounds from Cobalt Station for the week ended August 30th, 1918:—

Dominion Reduction, 65,400; Buffalo, 88,135; La Rose, 65,777; Hudson Bay, 65,772; total, 285,084.

The total shipments since January 1st, now amount to 19,740,973 pounds, or 9,870.4 tons.

CAPITAL AND LABOR IN CANADA

Sir Robert Borden, Prime Minister of Canada, speaking at the Canadian National Exhibition on Labor Day, said:—

"Not very long ago the great organizations of railway employees sanctioned and accepted a policy which has been embodied in an agreement made between the Canadian Railway War Board and the Railway Brotherhoods and Orders. The Canadian Board of Adjustment, thus constituted by formal agreement, comprises 12 members, six of them representing the Canadian Railway War Board (which acts for the railway companies of Canada), and six of them representing the various organizations of employees. The powers conferred upon this board will, I believe, enable it to redress all grievances and to adjust all differences promptly and satisfactorily. All need for strikes is avoided, transportation of food, munitions and supplies is not interfered with, the national effort is not weakened. The Canadian Board of Adjustment is to continue during the period of the present war, and thereafter until it is terminated by 30 days' notice on either side. I am confident that its purpose will be as great as its purpose, and will amply justify its continuance as a permanent arrangement.

"Surely as an outcome of this war there will be some better understanding between employers and employed and more reasonable methods of settling differences. Men speak to-day of the possibility that the peace of the world may be secured by the establishment of a league of nations. The purpose is so commanding that even if its success be doubtful we must support the effort in the hope that the world will thus be led towards higher things. But how shall nation join with nation in a scheme of arbitrament for enforcing the peace of the world if within the nation itself these important but minor difficulties between employer and employed cannot be settled without industrial war? We are learning lessons which will, I hope, open our eyes to higher possibilities and truer ideals in our domestic concerns.

London building permits for the month of August amounted to $55,760, compared with $31,255 in August last year. The total for the year ended August 31st, was $304,120, compared with $515,435 for the corresponding period last year.

FIRE PREVENTION IN ONTARIO

League is Formed to Co-operate With Provincial Fire Marshal's Department

At the instance of the Ontario government a conference was held on Friday, the 30th August, at the parliament buildings, Toronto, to discuss the best method of decreasing fire losses in the province. About three hundred delegates were present, representing various municipalities and organizations throughout the province. As a result of the meeting a permanent organization called the Ontario Fire Prevention League was formed, and a number of resolutions adopted. The honorary president of the organization is Sir William Hearst, prime minister of Ontario, at whose invitation the delegates assembled. The president is Mr. Arthur Hewitt, general manager of the Consumers' Gas Company, Toronto, and a vice-president of the Board of Trade. Mr. H. J. Waddie, of Hamilton, is first vice-president, Mrs. L. A. Hamilton is second vice-president, and Mr. George F. Lewis, of the fire marshal's office, is secretary-treasurer. The conference lasted all day, with Sir John Willison in the chair. A number of resolutions, which were read by Mr. John B. Laidlaw, of the Norwich Union Fire Insurance Company, were adopted as follows:—

The adoption by municipalities of a standard building code so that fire-resistive building construction may be encouraged, the use of inflammable roof coverings prohibited, adequate exit facilities from buildings secured, and interiors so designed and fire-stopped as to make easy the extinguishment of fires therein.

The adoption by the province of a minimum building code for the protection of hospitals, schools, asylums and similar institutions, outside the city limits, and in small communities in which the establishment and enforcement of a building code is impracticable.

The adoption by municipalities of the "Suggested Bylaws" published by the fire marshal's office providing for the systematic inspection of all buildings, for cleanliness, the removal of rubbish, the maintenance of proper exits, fire fighting apparatus and other protective devices.

Application of the principle of common law of personal liability where a fire originates in the premises occupied by any person as a result of his criminal intent, design or wilful negligence.

Wider general use of automatic sprinkler and the more general adoption of the fire division wall.

Careful study of water supplies, fire department efficiency and possibility of co-operation among neighboring cities and towns.

Universal adoption of the safety match, and legislation prohibiting smoking in all parts of factories, industrial and mercantile buildings.

Regulation or transportation, storage and use of inflammable liquids and explosives.

Education of the public in careful habits regarding the use of fire, and prohibition of fireworks except by special license.

Statutory obligation upon every municipality to equip and maintain a fire brigade and provide a water supply.

Equipment of barns containing farm produce with standard lightning rods.

Inspection of all electric wiring throughout the province.

The meeting opened at 10 o'clock in the provincial parliament buildings, and was called to order by the premier, Sir William Hearst. He commented upon the heavy fire losses in the province which for the past twelve months had been something like $12,000,000. 7,000 dwellings were destroyed every year, which meant that over 30,000 people were without homes. Most of these fires were due to carelessness. This was, he said, in spite of the fact that the Canadian fire departments are among the best in the world. The object in calling the conference, he said, was to form a fire prevention league to co-operate with the fire marshal's department maintained by the province. He desired that the organization should represent all interests in the province who were concerned with the prevention of fires, and emphasized the fact that the assistance of the public was absolutely necessary. "To create public sentiment," he said, "is the only thing which will do away with fire waste."

The Hon. I. B. Lucas, the attorney-general, of whose department the fire marshal's office is a branch, then spoke

view to determining the causes. Results so far prove that care-

briefly, outlining the function of the office. The fire marshal was appointed about two years ago under a special act of the provincial legislature. His work is divided into two branches, the first being the investigation of fires. He pointed out that it was not merely those which were known to be incendiary that were investigated, but rather all fires, with a view to determining the causes. Results so far prove that carelessness was by far the most prevalent cause. The other branch of the fire marshal's work is that of fire prevention, and it was mainly to assist in this branch that a voluntary organization was desired. Mr. Lucas also stated that Mr. Justice Masten, who was appointed about one year ago to investigate the subject of fire insurance rates, would have his report ready soon. What he emphasized most of all was that a new organization should go slow in advising drastic legislation by the provincial legislature. He said that the government was prepared to lead public sentiment to some extent, but, generally speaking, all it could do would be to enforce regulations when the public clearly expressed a desire for them. The legislation should be permissive rather than compulsory.

Sir John Willison was then elected chairman of the meeting, and Mr. George F. Lewis, the deputy fire marshal, was elected secretary. It was unanimously agreed that the chairman should appoint committees on nominations, on constitution and by-laws, and on resolutions, as part of the temporary organization.

Address by Ohio Fire Marshal.

The principal feature of the morning session was an address by Mr. T. Alfred Fleming, state fire marshal of Ohio. Mr. Fleming stated that he was an old Ontario boy and had, therefore, a special interest in work of this kind in the province. Fires, he said, were costing far too much in the United States and Canada. He described the work of his department in Ohio where there is a committee under the guidance of the fire marshal, and also a committee in every town to co-operate with him. The main purpose is to arouse public sentiment by a process of education. Schools are used to a large extent for this purpose, but the principal means, he said, were the press and the motion picture films. The Credit Men's Association, he said, also rendered valuable assistance.

An address was read by Mr. George F. Lewis, deputy fire marshal of the Province of Ontario. The solution of the problem, he said, was expressed by the three words, education, carefulness, and cleanliness, and the proper means to be adopted were action, legislation and co-operation. Nearly all the fires in Ontario are due to carelessness. Over 82 per cent. are from the same four sources, and over 86 per cent. are in the same classes of risks. Regarding fires in barns, he said that lightning rods are 99 per cent. efficient and will reduce the fires in this class of risk to a minimum. Insurance companies recognize the value of lightning rods and give reduced rates for risks which are protected in this way. Fires in manufacturing and mercantile establishments can also be materially reduced. Mr. Lewis also referred to October 9th, which will be observed as fire prevention day. This day is the anniversary of the Chicago fire, which commenced on the 9th of October, 1871, in which 18,000 homes were destroyed, 100,000 people rendered homeless, 200 people killed, and property to the value of $200,000,000 destroyed. A general discussion then followed. Mr. J. C. Martin, of Hamilton, suggested that fire companies should have their inspectors report defective conditions. A short address was also given by Mr. Greer, of the National Board of Fire Underwriters of the United States.

In the afternoon the permanent organization was formed. After the various committees had made their reports, an address was given by Mr. John B. Laidlaw, manager of the Norwich Union Fire Insurance Society, and a director of the National Fire Protection Association. Mr. Laidlaw's subject was, "What Can Women and Children do to Prevent Fires?" He said that in the four years from 1912 to 1915, inclusive, 789 lives had been lost by fire in Canada. Of these 172 were men, 304 women, and 313 children. Of the 30 fires that occurred every day in Ontario, 20 were in dwellings. Three fires were caused every day by matches, while many were also caused by the careless use of electrical appliances such as iron, etc. Other causes were the careless placing of ashes, overheating of stoves and furnaces, and failure to clean up rubbish. Mr. Grove Smith, of the Dominion Commission of Conservation, gave an address, saying that the laws of the province were not properly enforced, especially with respect to hotels and moving picture shows.

LETTER TO THE EDITOR

Bank Advertising.

I have read with much interest and approval the address of Francis R. Morison, of Cleveland, given before the financial advertisers' convention recently held in San Francisco, and published in your issue of the 23rd instant.

To one who has given the matter any consideration at all, it is plainly evident that educational advertising as a factor, and a most important and far-reaching factor in the upbuilding of any business, has been almost entirely neglected by our Canadian banks.

To-day to the most casual observer who follows the advertising as generally indulged in by the various banks and appearing in the daily papers and current periodicals it is plainly patent that the subject of banking is receiving not only scant recognition, but is being actually hampered by poor press writing, as granting an occasional good presentment, although its effect is usually marred if not wholly neutralized by its strong partisan coloring—the great mass of banking advertising matter as offered to the reading public to-day may, we think, be justly described as nondescript, lacking in attractiveness and largely devoid of informative facts.

Looking at the subject dispassionately, one is amazed that interests so powerful, so influential and so weighty in the welfare and progress of the life of our country as our banking interests are, should be so obscurely and inadequately placed before the public. It seems almost incredible that our leading bankers, men of high technical training and knowledge with a national and international view and grip on questions of commerce and finance should be content to allow the great science of which they are masters to be presented to their big customer—the public—in the stereotyped style of sixty or seventy years ago, wherein but little more than the name and age of bank appears, overlooking altogether the fact that the people of to-day are thinking and trading internationally, and are justified in looking more and more to their bankers and leaders in finance for further information and instruction along these lines.

This neglect and indifference in presenting their case to the people has already resulted in a certain antagonism between the man in the street and our banking institutions—an antagonism we may say wholly unjustified and entirely based on the lack of knowledge of the functions of banking and the real work our banks are doing, and this misunderstanding if allowed to continue can only result in great hurt to all parties, most particularly to the country itself in retarding, if not actually preventing, normal development.

What is the remedy? The first great need is to place the business of banking in its rightful place in the public mind and estimation—what it is and what it should accomplish—and show how these two demands have been met by our banks in building up our own national life.

Owing to past laxity this will be a work and effort of no mean magnitude, and will require the co-operation, or as Mr. Morison tersely puts it, "team-play" of all banks in the launching of the right propaganda.

To my mind the first and most effective measure that the banks can take is to inaugurate a real educational campaign.

This plan of "community" or "united" advertising will lift the whole subject out of its present moribund state, give it a national rather than a parochial status, centrally control it, and through a bureau or committee competent in knowledge and experience speak to the people of the country through the press and current literature, telling in the simplest language of the science and ethics of banking and directing how its facilities may be taken advantage of to its own profit by each and every class of citizen.

Nor would this plan, as one might think at first, benefit unduly the largest banks, as were the campaign carried on as it could and should be, along strictly educational lines, it would not be long before the public would develop a nice discrimination that would not confuse size with strength, nor claims with accomplishment, and it would inevitably follow that to the bank with the most complete organization and highest degree of efficiency in staff would accrue the greatest good.

Furthermore and entirely apart from interested professional sentiment, this method of advertising **banking** rather than **banks** appeals to one on patriotic grounds, as undoubtedly the developing and energizing of forces—now lying dormant through lack of knowledge of how to use—through an united enlightening, progressive campaign would do much not only in maintaining the present high level of our national prosperity, but in hastening the day when Canada will take a worthy and leading position in the trading markets and financial centres of the world.

Yours, etc.,

N. C. Stephens,

Manager Foreign Department,
Standard Bank of Canada.

INVESTMENTS AND THE MARKET

News and Notes of Active Companies—Their Financing, Operations, Developments, Extensions, Dividends and Future Plans

Laurentide Company.—The annual statement of the company submitted to shareholders on September 3rd, gave approximately the same results as in the company's 1916-17 year. In that period the company earned for its stockholders, after deduction of the usual charges, the sum of $1,988,193, equal to a little less than 21 per cent. After providing for war taxes the net surplus was $1,720,011, equal to 17.9 per cent. earned.

General Motors Company.—At a special meeting of the stockholders of the company, it was voted to increase the capital stock from $200,000,000 to $300,000,000. The preferred stock was increased from $50,000,000 to $100,000,000, and the common stock from $150,000,000 to $200,000,000. There was also approved a bonus scheme, which provides for the distribution of 10 per cent. of net earnings each year to employees of subsidiary companies as a reward for their contributions to success of the companies.

WEEKLY BANK CLEARINGS

Statistics relating to Dominion Savings Banks, Post Office Savings Banks, National Debt, Building Permits Compared, Index Numbers of Commodities, Trade of Canada by Countries, and Preliminary Monthly Statement of Canada's Trade appear once a month as issued by the various Government departments.

The by-law to give the Hastings Tanning Company a fixed assessment for ten years was carried on August 26th by an unanimous vote. Over 90 per cent. of the total vote was polled. The plant of this company was destroyed by fire last October. Plans have been prepared for the erection of one of the most up-to-date oak sole leather plants in the Dominion. Building operations will commence immediately. The Hastings Tanning Company is a subsidiary company of the Breithaupt Leather Company, with head office at Kitchener.

Mr. W. S. D. Cook, manager of the William Lyall Shipbuilding Company, arrived in North Vancouver on August 24th, with the signed up contracts for eight 1,500-ton twin screw steamers to be built by his firm for the French government. These boats form a part of a unit of 20 boats allotted to British Columbia by the French government, the allotment being: William Lyall and Company, 8, Western Canada Shipyards, 5, New Westminster Construction Company, 5, and Coquitlam Construction Company, 2.

Merchants Casualty Co.

Monthly Income Policies a Necessity
A legacy of life insurance amounting to $100,000 was completely dissipated in seven years by faulty investments and expensive living. In another case a beneficiary squandered the proceeds of a life insurance policy amounting to $50,000 in a single year. To protect the beneficiary against inexperience in making investments, and against extravagance, the monthly income policy has been introduced, providing an automatic, safe and profitable investment of life insurance funds. Supplement your existing insurance with a monthly income policy. It can be written on the life, limited life or endowment plan. Such a policy with our disability clause incorporated is without an equal in furnishing ideal household protection. We will gladly furnish full particulars and illustrations.

ONTARIO WORKMEN'S COMPENSATION*

Operations of Act Described with Special Reference to the Relations of the Board to Municipalities

BY SAMUEL PRICE,
Chairman, Ontario Workmen's Compensation Board.

I have been requested to give an explanation of the Workmen's Compensation Act in its relation to municipalities. I will try to outline the matter briefly, leaving further detail for any discussion or questions that may follow.

The present act came into effect in 1915. It made a radical change in the rights of workmen and the liability of employers in respect to accidents. In the industries to which it applies, the right of the workman is no longer founded upon negligence or breach of duty of the employer; it is enough if the accident arises out of and in the course of the employment. The injured workman is entitled to 55 per cent. of the amount of earnings he loses, or of the amount it is estimated he is likely to lose, by reason of the injury, or in fatal cases his widow and children or other dependants are entitled as provided in the act. The award is made by the Workmen's Compensation Board, and no action lies in the ordinary courts.

Application of Act.

This new system of law applies to the industries enumerated in schedule 1 and schedule 2 of the act. The employers coming under schedule 1 are required to contribute to an accident fund out of which the compensation is paid; the employers coming under schedule 2 are individually liable to pay the compensation as accidents occur. (Sections 4 and 5.)

The new law applies to municipal corporations, public utility commissions, other commissions managing or conducting any work or service owned by or operated for a municipal corporation, boards of trustees of police villages, and school boards. I will use the word "municipality" hereafter as including all these bodies.

Municipalities are in schedule 2 unless, upon application, the board places them in schedule 1. The law covers, however, only such activities of a municipality as would be covered if carried on by a company or individual—namely, the activities or operations enumerated in schedule 1 and schedule 2 of the act. (Section 2 (2).)

Road and street making and electric power systems, for instance, if the workmen are in the employ of the municipality, are covered, because these operations are included in the schedules of the act; but a fire department or police force is not covered, because they are not included in the schedules of the act.

Among the activities of a municipality which are covered are road, street and sidewalk making and repairing; gravel pits, quarries and stone crushing; bridge building; construction and operation of electric power or light systems, gas systems and street railways; sewer construction; building of all kinds, including repairing; construction and operation of waterworks and municipal abattoirs, where not less than four workmen are usually employed; and street cleaning, scavenging, removal of snow or ice and construction or operation of telephone lines, where not less than six workmen are usually employed.

Among the things not covered are hospitals, police forces, fire departments, markets, public health departments, parks departments, municipal coal and wood yards or stores, jails, poor houses and cemeteries.

It is remembered also that even in the departments of work covered persons engaged merely in clerical work and not exposed to the hazards incident to the nature of the work carried on in that department are not covered; thus, a bookkeeper or office hand in the waterworks or street railway department, whose duties do not take him through or around the plant or railway, would not be covered. This is because office help not exposed to the hazard of the industry is not included in the definition of "workman." (Section 2 (1) (p).) The board has held that a meter reader of a gas or electric department is covered because he is to some extent exposed to the hazard of the gas or electricity.

Mayors, reeves, members of council and municipal clerks and treasurers are not covered. They are not within the definition of workman. Municipal tax collectors, assessors and solicitors are not considered to be covered. A caretaker or a scrub woman looking after the city hospital or looking after the town hall would not be covered, but a caretaker or other help employed around the electric plant or gas works would be covered.

Bringing Other Work Under.

Under an amendment passed in 1916 (section 76a), the municipality may apply to the board to have any department of work or service not covered brought under the act and put either under schedule 2 or schedule 1. Under this amendment also the municipality may apply to the board to transfer any department of work or service from schedule 2 to schedule 1, thus converting the individual or direct liability of the municipality to pay for accidents as they occur into a liability to pay an annual assessment to the board and have the board pay for any accidents that may happen. This, in other words, is insuring with the board, and is really better than ordinary insurance, because the municipality is freed from even primary liability for accidents. The board, however, has never accepted applications to place policemen or members of a fire department in schedule 1. This is, because it was felt that the nature of these employments was such that the hazard should not be added to any of the classes of industry in schedule 1. A municipality in schedule 2 may, of course, like any other employer individually liable, insure with an insurance company to indemnify it against any compensation which it may be liable to pay under the act.

Contract Work.

It is to be remembered always that it is only workmen in the employ of the municipality that the municipality is liable to pay or provide compensation for. If the municipality lets the work to a contractor, it is the contractor that is primarily liable, but in such case it is the duty of the municipality to see that the contractor pays his assessment to the Workmen's Compensation Board, otherwise the municipality is itself liable to pay it (Sections 10 (3) and 98.)

Medical Aid.

In addition to paying compensation to injured workmen, the act also requires the employer in schedule 2 cases, and the board in schedule 1 cases, to provide all injured workmen with necessary medical and surgical aid and hospital and skilled nursing services for a period not exceeding one month from the date of disability. If the municipality fails to furnish this where under obligation to do so, it will be liable to pay for necessary medical aid services procured by the workman or anyone in his behalf. (Section 44a.)

Administration Expenses.

Municipalities under schedule 2 that have accidents are also liable to pay to the board their proportionate contribution toward the small balance of administration expenses not provided for by the government. Last year this amounted to the rate of $1.40 for each ordinary accident, a death claim, however, being reckoned as equivalent to five, and a permanent disability case to three ordinary accidents. The board notifies the municipality of the amount. (Section 103.)

It may be of interest to mention that during 1917 there were 38 municipalities in the province that had accidents for which compensation was awarded. The total number of municipal accidents compensated during 1917 was 173, of which 157 involved only temporary disability, 5 permanent disability and 11 were death cases. The compensation during the year amounted to about $40,000. The amount of compensation awarded by the board in all industries under its jurisdiction during 1917 was $2,013,085.81.

Procedure in Case of Accident.

When an accident occurs, the municipality is required by the act to notify the board of it within three days. (Section 91.) Upon receiving notice of the accident blank forms for the necessary information are sent by the board to the employer and the workman, to be filled out and returned. A form is also sent for a report from the attending surgeon. Further information is asked for where deemed necessary, or investigation by an officer of the board is made where the circumstances appear to require it. Award is made by the board and notice of it sent to the municipality and to the workman. The municipality may pay the workman the amount direct and forward the board the workman's receipt, or may remit it to the board, making the cheque payable to the workman. If it is a schedule 1 case, the board, of course, itself

ALEX. BISSETT - Manager for Canada

THE PRUDENTIAL has a large force of Canadian employees at work in every large city in the Dominion selling Gibraltar-like life insurance policies and industriously paying death claims in afflicted homes day after day. The Prudential has throughout the United States and Canada Fifteen Million Policies in Force, equal to nearly twice the population of the Dominion, and indicating the popularity of this big American Company.

AGENTS WANTED.

The Prudential Insurance Co. of America
Incorporated under the laws of the State of New Jersey.
FORREST F. DRYDEN, President Home Office, NEWARK, N. J.

pays the compensation. The average time elapsing between completion of reports and the making of the first award by the board is six days. Further bi-weekly awards are made on the day they fall due if the information warrants.

Where the injury results in permanent partial disability, that is dealt with after the close of the temporary total or temporary partial disability, and after the workman has recovered from the injury as fully as he is likely to recover. Awards for serious permanent disability and awards to widows and children are in the form of a monthly pension.

The outstanding features of the present law are its simplicity, speed and inexpensiveness. The intracacies and technicalities of the old law and procedure have been abolished. Legal assistance is unnecessary. The board insists upon dealing directly with the parties. We eliminate the lawyers not because we object to them—personally I would rather deal with them than with any other class of the community—but because the intention of the act is to make their services and the consequent expense unnecessary. Under the present law compensation to workmen for accidents in their employment has become the general rule rather than the exception: the employer is no longer troubled with vexatious litigation. there are no costs and expenses; and practically everything paid by the employer goes direct to the workman or his family.

Rights of Employees not Covered.

Employees not covered by the new system of law may pursue actions for damages against their employer in the ordinary courts, and in several respects their case there is made easier than it used to be by the provisions of sections 106 to 108 of the Workmen's Compensation Act. With this, however, the board has nothing to do, except that in case any question arises as to the right to pursue such action that question is to be determined by the board. (Sections 15 and 64 (4).)

Action Against a Third Party.

The workman's right to bring an action against a party other than his employer, where such party has caused the accident, also still continues, except where that party is an employer in schedule 1, and where such a right of action exists he must elect whether he will pursue it or claim compensation through the Workmen's Compensation Board. If he does the latter the employer in schedule 2 cases and the board in schedule 1 cases, is subrogated to his rights against the third party. (Section 9.)

Information concerning the act or anything connected with its administration will always be gladly given by the board and communications from anyone interested are welcomed.

VICTORY LOAN PREPARATIONS

Arrangements for the big 1918 Victory Loan campaign are already under way. A thorough preparation will be made in the way of an advertising campaign, not only through the press, but also by the use of posters, motion pictures, public meetings, etc. The members of the Dominion executive committee the chairman of which will be Mr. E. R. Wood, are at present being selected. Chairmen have been appointed for the committees in the different provinces and some of the provincial committees have already been formed.

The services of bond dealers will be employed almost to the exclusion of their regular business. When the actual selling campaign is on, however, the organization will extend into all branches of industrial and financial business. The Dominion executive committee will be large and will represent all the larger interests in the Dominion.

The following is the Nova Scotia provincial executive committee: Mayor Hanson, Messrs. J. S. Neill, R. FitzRandolph, C. D. Richards and W. P. Clarke, Fredericton. Other members are: J. W. Scovil, J. M. Flewelling and C. Mott, St. Stephen; G. P. Burchill, Nelson; J. A. Creaghan, Newcastle; H. A. Melanson, B. C. Mullens, T. M. Burns, J. B. W. Storer, Bathurst; C. Luke, R. V. McCabe, R. A. Loggie, Chatham. The district chairman, S. E. Elkin, M.P., St. John county; W. B. Snowball, Chatham; Judge McLatchy, Campbellton; S. S. Miller, Hartland; Hon. J. A. Murray, Sussex; J. D. Palmer, Fredericton; Hon. Senator Todd, St. Stephen; Angus McLean, Bathurst; S. R. Legere, M.L.A., Caraquet.

RECENT FIRES

The Monetary Times' Weekly Register of Fire Losses and Insurance

Athens, Ont.—September 4—Blacksmith shop on Elgin and Wiltse Streets was destroyed.

Brantford, Ont.—August 29—Tenement house on Oxford Street was destroyed. Estimated loss, $11,000.

Britannia Bay, Ont.—August 30—The club house of the Britannia Boating Club was destroyed. Estimated loss, $45,000.

Mount Elgin, Ont.—September 3—Granary of H. P. Shuttleworth, and 2,500 bushels of grain were destroyed.

New Hamburg, Ont.—September 2—Two barns, contents and thrashing machine outfit of F. Schaefer and Son, were destroyed. Estimated damage on buildings, $5,000, on grain and contents, $4,000. Insurance carried on buildings, $2,500.

Sault Ste. Marie, Ont.—August 29—The lumber yards of Eddy Brothers at Blind River were destroyed. Estimated loss, $200,000.

Toronto, Ont.—September 1—The Yonge Street Arcade was damaged. Caused by defective wiring. Estimated loss, $20,000. The trunk line of the Bell Telephone Company, which runs under the Arcade, was damaged. The chief losers are: The Scotland Woolen Mills Company, the National Typewriter Company and the Sterling Trusts Corporation.

September 4—The building of the Street Railway Company, on Frederick Street, was damaged. Caused by burning out of generator.

Yarmouth, Ont.—September 4—Buildings and contents of the St. Thomas Pure Milk Company, on Gravel Road, were destroyed. Estimated loss, $50,000. Insurance carried, $25,000.

DUNDAS TO ISSUE DEBENTURES

At a meeting of the Dundas council held in the town hall on September 3rd, a by-law was passed authorizing the issue of debentures to the extent of $27,000. The funds are to be used for the extension and improvement of the waterworks.

CANADIAN LOCOMOTIVE MAKES GOOD PROFIT

Although the profits for the year ended June 30th, 1918, are somewhat less than for the previous year, the showing of the Canadian Locomotive Company is still excellent. After paying war taxes, etc., the profits were $677,937, as compared with $721,254 for the previous year. Interest required $90,000 and depreciation for special replacement $25,000, both the same as last year; $100,000 was also set aside for depreciation. This left a balance of $462,937 which, added to the previous balance, made a total of $1,169,417; $15,000 was set aside for sinking fund. Preferred dividends required $105,000 and common dividends $120,000. This leaves a balance carried forward of $929,417, as compared with $706,479 last year.

The assets of the company total $7,694,944. This is made up of fixed and current assets of the company, together with sinking fund for the retirement of the company's first mortgage bonds, and an investment in one-quarter of a million of Victory bonds. The chairman of the board, Mr. Æmilius Jarvis, pointed out that the company has on hand at the present time, contracts which will keep the shop fully occupied for many months. These contracts, he said, were taken at satisfactory prices and unless something unusual occurs, practically assures that the statement next year will also be satisfactory.

The capital stock of the company consists of $2,000,000 ordinary and $1,500,000 of preference, both fully subscribed and paid up. There are also issued the $1,500,000 of first mortgage 6 per cent. sinking fund gold bonds due July 1st, 1951. Interest on the bonds has been maintained, 7 per cent. paid regularly on the preference stock and 3 per cent. has been paid on the common stock since last year. The full report appears elsewhere in this issue.

Trade Policies After the War

The Allied Nations' Striking Superiority in the Raw Materials for Industry, and the British Empire's Prominent Place Among Them—The Need of a Special Empire Trade Policy as a Wheel within the Bigger Wheel of Allied Trade Agreements—Preference to Empire Industries in the Distribution of Raw Materials Produced within the Empire.

By **GEORGE W. AUSTEN**

ONE of the most difficult of the war problems is the working out of the Allies' trade policy to come after the war. So many conflicting interests and ideas operate in international trade matters that a readjustment of policy among about twenty-five nations, of all kinds and conditions, must inevitably be attended by perplexities and obstacles. Already there have been long discussions among the statesmen, particularly among the government leaders of the Empire, regarding the future trade policy of the Entente, and of the British Empire as a foremost part of it.

The outstanding decision is, of course, that unless the peace with the Germanic group of powers brings them into a League of Nations on terms satisfactory to the Allied powers, there will be economic war. To enter such a league, Germany must subscribe fully and heartily to democratic and peaceful aims and purposes. It must consent to be bound by iron-clad rules preventing it in every way from preparing a new menace to the world, and guarantee to obey those rules. No one can tell what the outcome in this respect will be, for while the Allies are assured of complete military victory, they cannot control Germany's disposition toward them. Thus the matter of Entente economic policy must remain somewhat in abeyance, but the whole ground is being thoroughly canvassed in preparation for the great day when representatives of the nations gather around a great table to discuss peace agreements and policies.

There is no doubt whatever that one of the most important subjects the peace conference will have to deal with will be this matter of international trade policy. The Germans have termed this a "war of raw material." If it is taken for granted that the Allies' stipulation of freedom for each recognized national unit, territorially and racially, will be fulfilled, the next great question will be that of distribution of materials for industry, and adjustment of trade policy among the nations. Germany's famine in so many lines of raw material means that its most important object, in peace terms, must be to get its full share of the depleted stocks on hand at the end of the war. Even questions of territory are secondary to this.

At the fourth Inter-Parliamentary Commercial Conference of the Allies, held recently, interesting and significant statistics were presented, showing the vast superiority of the Entente nations in raw material resources. The comparison is with the aggregate resources of Germany, Austria-Hungary, Bulgaria and Turkey.

Textiles.	Entente.	German Coalition.
Wool	1,138,000 tons	97,000 tons
Cotton	4,659,000 tons	None
Silk	229,000 tons	16,000 tons
Flax	1,225,000 tons	100,000 tons
Hemp	912,000 tons	None
Jute	1,482,000 tons	None
Metals.		
Iron ore	104,000,000 tons	37,000,000 tons
Copper	780,000,000 tons	29,000,000 tons
Lead	1,000,000,000 tons	172,000,000 tons
Zinc	1,513,000,000 tons	678,000,000 tons
Nickel	389,000,000 tons	14,000,000 tons
Aluminum	529,000,000 tons	10,000,000 tons
Manganese	222,000,000 tons	124,000,000 tons
Other materials.		
Petroleum	50,000,000 tons	700,000 tons
Oil seed	8,230,000 tons	166,000 tons
Olive oils	1,345,000 tons	None
Rubber	129,500 tons	None
Coal	878,000,000 tons	307,000,000 tons
Rice	94,000,000 tons	106,000 tons
Coffee	805,000 tons	None
Tea	354,000 tons	None
Cacao	187,000 tons	6,500 tons

These figures are evidently based upon a peace-time basis that excludes German control of Roumanian, Russian and Belgian resources. But they show conclusively what little hope the Central Empires can have of competing in an economic war with the great nations of the Entente.

German commercial leaders are far too astute not to recognize what is involved in the struggle for raw materials after the war. In "Der Welthandel," of Bremen, recently appeared a long article, explaining that Germany would need, first, material for spinning, hides and skins, high-grade ores, rubber, oil kernels, animal fats, fodder, cocoa, tea, tobacco, etc. Cotton, wool and copper especially are badly needed, since nearly all civilian Germany has, for a year or two, been dressed in cloth made from paper yarn, and every article containing copper, even the roofs of the churches, has been seized for munitions. The "Vossische Zeitung" speaks frankly:—

"By cutting off textiles, the Anglo-Saxons will harm us in our clothing and comfort, but if they succeed in depriving us of raw oleaginous products, or hampering our supply, then they will be attacking the sources of our existence.

"The ruin of our candle, soap, fat, oil and varnish industries would not be the worst consequence. The residues from oleaginous plants, as cattle food, play a preponderating part in our farming. From these our oil industry obtained 800,000 tons of vegetable oils, while 600,000 tons were transformed from pulp into cattle fodder. It is no mere fanciful statement that if, after the war, we obtain practically no more oleaginous products from the English colonies, then we lose over 70 per cent. of colza and rape seed imports, 45 per cent. of our poppy imports, 50 per cent. of our ground nut imports, and nearly 30 per cent. of our sesame imports. We would not get more than 10 per cent. of our previous palm kernel supply, and we should lose 45 per cent. of our copra imports. Fibrous materials and oleaginous fruits are by far the most important for us, and after that comes copper."

Having such a wealth of raw materials of every kind, especially tropical products, the Entente nations may contemplate without uneasiness any prospect of an economic war with Germany and its dependents. In fact, the larger concern among the Allies must be the arranging of a policy among themselves for the distribution of the surplus stocks of materials. The recent Imperial War Conference in London, and the Colonial Conference as well, considered at great length the position of the British Empire in the matter of raw materials. Some important decisions were adopted, according to intimations from high authority. Probably as a result of these the British Government announced its decision to begin a policy of preference to products of the Dominions entering the United Kingdom. The Empire Governments have to consider, first, how the special resources of the Empire shall be used to build up the various sections of it—and particularly the Mother Country; second, how such Allies as France and Italy may get their full share of materials; third, how arrangements will be made with outside nations for such needed materials for industry. Apart from the United States, perhaps, the British Empire has a dominating part in the production of raw materials. It produces two-thirds of the finer wools for export, practically all the jute, most of the rubber, most of the tin, most of the nickel, most of the hemp. It produces about a fourth of the cotton and a large proportion of the tropical oils. Even the United States is dependent in many respects upon it.

It is obvious that much of the Empire's policy regarding raw materials must depend on whether it is necessary to combat Germany economically. In any event, we shall see allied doors closed to German goods for a long time out of sheer individual repugnance toward them. German goods will find a small market in Britain and in the Dominions, in France, Belgium, Italy, and probably the United States. But, as a wheel within the wheel, the policy of a self-contained and mutually co-operative Empire must be upheld as a foremost condition for after the war. We must not forget that the Motherland will be more badly exhausted than ever before in her history. The safety of the Empire depends on her recuperation to her former leading position. The various Dominions will be tempted to exploit their resources for the highest bidder, and to put their individual gain before co-operation. The important thing is that the Empire statesmen shall understand the great purpose of a closer trade connection between the various parts of the Empire. The resources of the Dominions should first be offered to the Motherland at fair market value. The building up of cheap sea transport between its various parts must be an Empire concern. Cheap cable communication, a new system of exchanging information and ideas and reciprocal trade concessions wherever possible will be needed.

To arrange all this without giving any of the Allies cause for offence, or causing any to feel that it is discriminated against, will need a bold, yet delicate hand. We must not forget that the United States, with its great new resources, will be in possession of an immense merchant marine. Legitimate trade concern bids Britain and the Dominions, once the war is out of the way, to hustle most energetically to recover lost ground. The proper direction of exports of Empire raw material should feed the British merchant marine and enable it to recover from its losses by the submarine. President Wilson has expressed his hope of "the removal, as far as possible, of all economic barriers and the establishment of an equality of trade conditions among all nations consenting to the peace and associating themselves for its maintenance." That is good policy, but it does not debar legitimate effort for the construction of a stronger Empire, economically, by internal preferences and special connections, having due regard for the claims of those associated with the Empire in the grand struggle to save civilization from the horror of Prussian triumph."

Dealers and others who may be ambitious in regard to this year's crop of potatoes and apples have been warned by the Canada Food Board against speculation. "In negotiations for the purchase or sale of apples, potatoes or other roots, due consideration should be given to the possibility of some action being taken by this board," declares their recent statement.

The consumption of Atlantic fish in Ontario for the first six months of 1918 was 500 per cent. over that of last year. In the western provinces the consumption of Pacific fish has also been [illegible] increased since the war, but Canadian fish consumption is still far short of the one pound per week standard recommended by the Canada Food Board in order to conserve meat supplies.

New sugar regulations have been put into effect by the Canada Food Board by which restaurants are limited to two pounds of sugar for every ninety meals served, while soda fountains and ice cream establishments are restricted to 25 per cent. of the average monthly amount of sugar used during 1917. The various manufacturers using sugar have also been subjected to revised regulations.

Hon. Geo. S. Henry minister of agriculture for Ontario, reports an increased area of 260,000 acres over 1917. The spring wheat crop was more than doubled with a yield of 22.7 bushels to the acre, the highest in the history of the province. A total of 127,000,000 bushels of oats was raised in Ontario. Helpers are now needed for the September clean-up and preparations for getting in the fall wheat.

INVESTMENTS AND THE MARKET

News and Notes of Active Companies—Their Financing, Operations, Developments, Extensions, Dividends and Future Plans

United Drug Company.—Reports of the company for six months ended June 30th last, show profits of $7,840,680. Other income amounted to $20,312, net profits $2,038,831, and the surplus, $1,719,167.

Great Western Power Company.—The company had gross earnings of $409,299 in July, an increase of $88,340 over the same month last year. The total net income of $245,506 was $36,918 larger than a year before.

Canadian Locomotive Company.—The company's regular quarterly dividends have been declared of 1½ per cent. on the common stock, and 1¾ per cent. on the preferred, both payable October 1st, to holders of record September 20th.

Trustees Executors and Agency Company, Limited.—This Australian company, whose head office is in Melbourne, had a net profit of £7,177 for the half-year ended June 30th, 1918. This was appropriated as follows:—

Dividend at 10 per cent. per annum	£4,500
Transfer to reserve fund	2,500
	£2,000
Carried forward	177

Reserves now total £219,646, and trust funds £12,250,000.

Inspiration Consolidated Copper Company.—The company produced 9,000,000 pounds of copper in August, the same amount as in July. In June the output was 10,300,000 pounds, and in May 10,250,000 pounds. While July and August showed a falling-off from the two preceding months, due to labor conditions, the production should be considered satisfactory when compared with a year before. The mines were totally closed down during July and August last year, because of a strike, and the average monthly output in the remaining months was not much more than 3,000,000 pounds.

Riordan Pulp and Paper Company.—At a special meeting of the shareholders of the company, the proposal to issue $3,000,000 in bonds was unanimously agreed upon. The issue of the new securities is made desirable by the company's interest in the Kipawa Fibre Company, which has purchased water powers and timber rights, and is carrying out the erection of a mill at Temiskaming for the manufacture of bleached sulphite pulp. In addition to the investment made by the company to secure permanent control of Kipawa Fibre, it was considered desirable to secure a further sum of approximately $3,000 000 for investment in the new company.

McKinley-Darragh Mines.—Increasing interest in the shares of Cobalt producers, has directed attention to the strong financial position of this company, which will enable it to continue the payment of 3 per cent. quarterly dividends, which have been maintained since 1914. A total of $5,348,504 has been disbursed in dividends since 1907. As of March 25, 1918, the surplus was $287,615, or more than sufficient for one year's dividends at the present rate. Reports indicate that high-grade ore is being encountered by the company from time to time during mining and development work, particularly in the Savage property.

Brazilian Traction, Light and Power Company.—The annual meeting of the company was held at the head office in Toronto on September 5th. Business was largely of a routine character, and the old directors were all re-elected. The president in his address to the shareholders intimated that the outlook for the company was good, he being particularly hopeful regarding conditions likely to obtain after the close of the war. In referring to the adverse conditions under which the company were operating owing to the outbreak of the war, he pointed out that whereas before the war coal could be laid down for the operation of the gas plant at $7.50, the freight alone last year cost $37 per ton. Generally speaking, the operating costs of the company had increased by about $1,000,000. The assets of the company improved by $4,800,000 during the year.

The president explained that expenditure on capital account was practically for the time being finished. The outlook for the telephone subsidiary of the company, he said, was excellent. The company has now 600 miles of trunk line in operation, and within six weeks after putting the three systems in operation the demand for service had become so great as to create a congestion. The gross earnings of the telephone system increased by 26 per cent. and the net by 32 per cent.

Spanish River Pulp and Paper Mills, Limited.—The annual statement of profits for the year ended June 30th, 1918, is as follows:—

	1918.	1917.
Net revenue	$1,729,231	$2,117,734
Less: reserved for depreciation	344,137	269,821
	$1,385,094	$1,847.913
Less interest on funded debts, etc.	807.519	718,409
Total net surplus	$ 577,575	$1,129,504
Balance consolidated profit and loss	993.726	699.621
Appropriated for extinction of deficiency account	$ 500,000	$ 835.399
Carried forward	$1,071,301	$ 993,726

The decline in net profits as compared with 1917 is accounted for mainly by the fixed price for newsprint established by the Dominion government. The plant of the company is devoted almost entirely to manufacturing newsprint, and it was, therefore, affected by the price fixing to a greater extent than were other paper companies who manufacture a number of lines. Nevertheless, the year was quite successful in every way. Interest was paid on the debt and other obligations and in addition to this one-half million was appropriated to wipe up the deficiency account. The balance carried forward is considerably more than one year ago. A number of improvements were made during the year. It had been expected that this could be made out of profits, but after the price of newsprint was fixed it was found necessary to secure additional accommodation from the banks for the purpose. Current liabilities accordingly increased. The assets of the company are now valued at $31,708,701.

Lake Shore Mining Company.—During the month of August the company produced between 45 and 50 thousand dollars' worth of gold. This is the best month's production in the history of the company, which commenced milling operations in March last. The estimated tonnage treated during the month was 1,800 tons. The monthly production has shown a steady increase from month to month since March last, with the exception of the month of July, when, owing to the mill being shut down for a few days for repairs the output fell off a few thousand dollars to $39,000. The production for the month of August shows both an increase in tonnage and value produced as well as an increase in value per ton treated, the heads running slightly over $26 to the ton. The following is the record of the company since the commencement of milling operations:—

Month.	Tons.	Value.
March	1.050	$ 24.606.50
April	1,520	42,090.00
May	1,750	43,000.00
June	1,761	43.353.36
July	1.580	39.000.00
August (estimated)	1,800	48,000.00
Totals	9,461	$240,049.92

This is an excellent record for the first six months' operations of the mine. The grade of ore throughout the six months shows an average of $25.22 to the ton. Last month the company went on a dividend paying basis, and it is probable, disbursements of 2½ per cent. will be made at regular quarterly intervals. Net earnings of the company are now considerably in excess of dividend requirements at this rate and a substantial margin is being carried forward to surplus each month.

Ore reserves are being added to at a rapid rate, owing to the fact that the larger portion of the ore being treated is coming from development work.

PERSONAL NOTES

Mr. E. J. Harvey, supervisor of agencies of the North American Life, is on a tour through the West.

Mr. J. M. McCutcheon, secretary of the Ontario Workmen's Compensation Board, has been appointed principal of the London Normal School.

Hon. Frank Cochrane has been appointed acting Secretary of State and Minister of Mines during the absence of Hon. Martin Burrell, who is taking an extended vacation.

Mr. J. D. MacGregor, of Brandon, has handed in his resignation as Western Food Administrator to Hon. T. A. Crerar, Minister of Agriculture. He will, however, remain a member of the Canada Food Board, occupying the position of director of production.

Lieut.-Colonel B. G. Winans has gone to Winnipeg as vice-president of the Dominion Loan and Securities Company. Mr. Winans was formerly of Montreal, where he represented the Dominion Bond Company up till 1914. He is also a director of the Central Grain Company.

Mr. A. J. Patterson, junior, of A. J. Pattison and Company, was recently elected a member of the Toronto Stock Exchange. Mr. Pattison is 33 years of age, and has been in business 11 years, during the last four or five of which he has devoted particular attention to unlisted securities.

Mr. R. Home Smith will be Ontario's new fuel commissioner, succeeding Mr. R. C. Harris, city works commissioner, of Toronto, who has been anxious to be relieved of the duties connected with this office since early last spring, in order to devote his full time to the many pressing civic matters.

Mr. W. J. Haines, of Philadelphia, was elected president of the Maurice Mines Company, Limited, at the annual meeting of the company in Quebec, on August 30th, when Capt. A. E. Doucet, former president, resigned, and was elected vice-president. Mr. Haines is president of the Penn-Canadian group of mines in Cobalt.

Mr. W. H. Carter, of Carter, Halls and Aldinger, contractors, was elected president of the Winnipeg Board of Trade on the 3rd inst. Mr. A. B. Hudson was elected vice-president, and Dr. C. N. Bell, treasurer. D. H. McFarlane will be secretary temporarily. The first act of the new board was to pledge its full support to the success of the next Victory Loan.

Lord Shaughnessy left Montreal for Toronto on September 8th on his annual western trip over the Canadian Pacific Railway, accompanied by four Montreal directors, R. B. Angus, Sir Herbert Holt, C. R. Hosmer and E. W. Beatty, where they were joined by Sir Edmund Osler and W. D. Matthews, fellow directors, also Dr. Baines, a Toronto physician.

Mr. E. E. Estlin, consulting engineer on natural gas supply and identical problems to the Ontario Railway and Municipal Board, has been appointed Commissioner of Natural Gas for the purpose of dealing with all complaints in connection with the administration of the board's orders in the border counties, and has opened an office at Chatham, which city will be his headquarters for the present.

Lieut. Harold H. W. Copp, of 96 Wellesley St., was killed in action on August 31. He went to England as company commander with the 255th Battalion in May, 1917, and to France in February of this year. Before proceeding overseas he represented Blackie and Son, Limited, Glasgow and London, and Morgan and Scott, Limited, London, and was for sixteen years connected with the Copp, Clark Company, Toronto. He was a member of the Toronto Board of Trade, the R.C.Y.C. and the Northern Congregational Church.

The purchase of the Bank of British North America by the Bank of Montreal was ratified by the shareholders of the latter at a recent meeting in Montreal.

CANADIAN LOCOMOTIVE OFFICERS RE-ELECTED

At the seventh annual meeting of the stockholders of the Canadian Locomotive Company, Limited, held in Kingston, the following directors were re-elected: Æmilius Jarvis, Toronto; J. J. Harty, Kingston; Robert Hobson, Hamilton; Warren Y. Soper, Ottawa; John L. Whiting, Kingston; Hon. H. W. Richardson, Kingston; and Frank G. Wallace, Pittsburg, Pa.

The board of directors re-elected the following officers: Æmilius Jarvis, chairman of the board; J. J. Harty, president; Frank G. Wallace, vice-president; and J. H. Birkett, secretary-treasurer.

HARVESTER COMPANIES MERGE INTERESTS

Stockholders of the International Harvester Company, of New Jersey, and of the International Harvester Corporation voted in Hoboken on September 10th to approve the agreement between the directors of their companies for a consolidation of the two into a single company to be known as the International Harvester Company. The new company will have $60,000,000 preferred and $80,000,000 common stock, this capitalization being the same as that of the old Harvester Company at the time in 1913 the corporation was organized to take over the foreign business and "new lines" of the company.

The action follows negotiations between the companies and the department of justice in respect to the reorganization of the Harvester concerns in accordance with the government plan.

C.N.R. SETTLEMENT

The Dominion government will pay within a few days $8,500,000 to Sir William Mackenzie, Sir Donald Mann and the Bank of Commerce, holders and pledgees of 510,000 shares of the Canadian Northern stock taken over from them by the government. The amount to be paid is in accordance with the agreement made that their stock should be taken over at a valuation of not more than ten millions for the whole 600,000 shares acquired by the government. The arbitration board, under the chairmanship of Sir William Meredith, placed the value of the 600,000 shares at $10,800,000, but under the terms of the agreement with Sir William Mackenzie, Sir Donald Mann and the Bank of Commerce, they were to accept only their equity, based on the ten-million valuation for the whole of their stock outstanding. The other shareholders, who were not parties to the agreement, and who held 90,000 shares, will be paid according to the valuation reached by the arbitration board, and will consequently receive $1,620,000.

SECRETARY McADOO ASKS FOR TAX REVISION

Late on the afternoon of the 10th inst., Mr. McAdoo, secretary of the United States Treasury, asked Congress for the immediate enactment of financial legislation with a view to facilitating the sale of government war bonds. He recommended a limited exemption from income, surtax, war and excess profits taxation of the income to be derived from the fourth Liberty loan bond issue, the flotation of which opens on the 28th inst. He also asked for legislation to free a larger portion of income from the first, second and third Liberty Loan issues from similar taxation.

Congress is giving consideration to these recommendations. Mr. Claude Kitchin, chairman of the ways and means committee of the House of Representatives, called a meeting of that committee on Wednesday, the 11th inst. In writing a letter to Mr. Kitchin, Secretary McAdoo said that he had been much impressed by the success of the plan used in Canada to maintain the market value of the bonds, but also pointed out, however, the difference between conditions on the two sides of the border, and said that, probably, the same plan would not be effective in the United States.

Henry O'Hara and Company, of Toronto, brokers, have made an assignment, according to an announcement on the 13th inst.

MARITIME UNION

We already know that changes may be brought about under the stress of war conditions which would ordinarily require years of discussion and preparation. The next few months may see a political change in Canada which has been proposed a number of times, but has never been completed. This is a union of the provinces of Nova Scotia, New Brunswick and Prince Edward Island.

It is interesting to note that the suggestion now comes from an educational source. A maritime educational convention recently met in Moncton, N.B., for the purpose of standardizing the educational systems of the three provinces and of adopting uniform text books. The discussion of the subject naturally led to a consideration of all the advantages which would be felt if the provinces were united, and it was found that practically all the delegates approved of a union of this kind. It will be something new if educational interests prove to be a moving force in Canadian political life, acting independently of political parties, or of trade and industrial interests, and the result should be beneficial. While this educational convention was meeting, another conference of the three governments was being held to arrange a uniform policy with regard to settling returned soldiers on the land. Recommendations of this kind were prepared for submission to the federal government.

The expansion of Canada into the west and the establishment of new provinces there has shifted the centre of our political and economic life westward. While other Canadian provinces have been growing rapidly, those to the east have been practically standing still. The result has been that new and greater interests have been developed, and controversies now range around questions quite different from the old subjects of dispute. The maritime provinces have been driven together, so to speak, in order to maintain their many common interests against the industrialism of Ontario and Quebec and the agricultural interests of the west. In the old days, when there was no Canadian west, it was easy enough to create political dissension among Nova Scotia, New Brunswick and Prince Edward Island, because they appeared to have economic interests at variance with one another. The development of manufacturing in Ontario and Quebec and of agriculture upon a new and extensive scale in the west has served to reveal the practical uniformity of the economic life in the maritime provinces. Prince Edward Island is agricultural, and agriculture is also a leading industry in the other two provinces. They are all devoted to fishing. New Brunswick has considerable forest resources in the course of development and Nova Scotia has large mining industries.

Before confederation with Canada opened the way to a larger union in 1864 a maritime union was being discussed in these provinces. Ever since the Canadian government took over matters of interest to the Dominion as a whole, as defined in the British North America Act, the maritime provinces have still found it convenient to act in common upon some local matters, and the advantage of having a common body, with authority to legislate on such questions, has become increasingly apparent. The Hon. J. B. M. Baxter, former attorney-general of New Brunswick, in addressing the Moncton conference, urged the union as a means toward securing stronger and more uniform representation of eastern interests in federal matters and united action in obtaining the full development of the resources of the provinces. Mr. H. J. Logan, K.C., of Amherst, said that if legislative union were not found possible an alternative might be found in a maritime legislative council to deal with matters of common interest, while the present legislatures, much reduced in size, could continue to care for matters of purely local interest. The former body might deal with education, higher courts of appeal, workmen's compensation, the encouragement of industry, the advertising of the resources of the provinces, etc.

This scheme would be simply a federation within the Canadian federation, and would have the advantage of securing uniform action on matters of common interest without disturbing matters of purely local concern. At the same time it would be a further complication of our political organization, and would certainly mean increased expense. The three provinces had, in 1911, a total population of 937,955. This was less than half the population of Ontario or Quebec. As the maritime provinces have remained practically stationary while the western provinces have grown rapidly, the prospects seem to be that, even united, they would soon fall considerably down the list. The maintenance of separate governments has been found to be extensive, particularly in Prince Edward Island, and this has been increasingly felt with the growth of the work of provincial government. The best plan would seem to be, therefore, simply a union into a new Canadian province, with the usual powers of government.

GUARANTEE BONDS AND CONTRACT TENDERS

Insurance companies which write guarantee contracts have been doing work of great value, not only to parties concerned in businesses of this kind, but also to the country as a whole, in releasing funds which would otherwise be tied up unnecessarily. Before they can do business in Canada they are required to make a deposit with the insurance department at Ottawa. In spite of this the Dominion Government has not yet expressed its willingness to accept guarantee companies' bonds as surety from contractors who submit tenders, although the matter has been more than once urged upon them. A few weeks ago it was announced that war loan bonds might be used for this purpose. This, of course, is an improvement over the use of cash, but at the same time the motive is evidently merely to encourage the purchase and holding of war loan bonds, and does not indicate a more liberal policy on the part of the government.

The advantages of guarantee company bonds to contractors are obvious. A contractor might be well equipped for work, but at a particular time might not have the cash necessary to accompany his tender. His only alternative under these circumstances is to borrow the amount required. For this he must pay probably 6 per cent., and, although he receives interest from the government, nevertheless, the difference between the government rate and the rate he pays amounts to a considerable expense. This expense must ultimately be borne by the government, as all contractors will take it into consideration in tendering for government work.

More security could be obtained from a contractor in the form of a bond than in the form of a cash deposit, because in the latter case the tendency is always to keep the bond at a minimum in order to occasion the least inconvenience to the contractor. The security could be held for an indefinite period without disturbing the contractor's business in any degree. No funds would be unnecessarily tied up in this way and the public interest would not suffer.

WAR BONDS AS INVESTMENTS

Faced with the necessity of raising $500,000,000 to finance Canada's part in the war for a further period, Canadians will also be faced with an investment opportunity such as was never offered until the past few years. The bonds of the Dominion of Canada, issued for war or other purposes, are absolutely safe, and there is no question of our ability to pay the interest on a debt even larger than we have so far accumulated, and also to make provision for its gradual repayment. No country in the world is composed of citizens who are more appreciative of the value of good credit, and who are, therefore, seized of the necessity of meeting the debts which they have incurred. So long, therefore, as we are able to pay the interest on the debt, there is no question but that it will be paid.

The conveniences of the war bonds for investment purposes have already been discovered by eight hundred thousand Canadians. Interest may be collected at any bank in Canada without charge for exchange. This practically means that the Canadian Government agrees to pay the interest wherever the holder might happen to be on the interest date. The bonds may be sold at a few days' notice, although the transfer of registered bonds requires a number of days. Holders may have their bonds registered in full as to principal or may keep bonds payable to bearer.

These features alone are such as cannot be found in any other Canadian security. There is another, however, of even greater value, and that is the feature of tax exemption. Our Dominion taxes will continue to grow in proportion to our national debt and expenditure, and unquestionably the income tax will be raised still further. The feature of tax exemption, therefore, should be of increasing value, and the increase in the income tax will be accompanied by a greater divergence between the market values of tax-free and taxable securities. The Minister has announced that the next loan will be tax-free, but it is quite possible that further loans will be taxable, and this may, therefore, be the last opportunity to subscribe to war bonds upon which income tax or corporation tax need not be paid.

English fish production has been seriously handicapped by the diversion of trawlers to war work. Plans are now under consideration to increase the export of dried fish from Canada to Europe.

Mr Herbert Hoover, of the American Food Administration, who visited England and France to confer with the food controllers of the Allies, says that this continent next year will have to supply the Allies with 1,000,000,000 pounds of fats, 900,000,000 pounds of beef products, 500,000,000 bushels of cereals and 1,500,000 pounds of sugar. In addition to the former responsibilities overseas, next year there will be the feeding of an enormous United States army in France. "We have to make good," says Mr Hoover. "We can do it if we simply have the will to live with every economy and waste nothing."

At a meeting of the shareholders of the Bank of Montreal on September 10th, the decision to acquire the Bank of British North America was unanimously ratified. Permission to sell the bank has already been granted by the shareholders in England of the Bank of British North America.

Heavy cattle and high prices bring large returns, but light cattle and cuts in price destroy profits. It pays to pasture cattle when the season has been fair, with good rains and good pasture during the last half of September and October. A little effort put forth now will make possible putting on an additional 100 pounds per head, and secure a better price for the cattle as well. The Canada Food Board and the British Purchasing Commission state that the beef situation in the allied countries makes it important to discourage sending unfinished cattle to slaughter.

LIFE REPRESENTATIVES FRATERNIZE

New York Convention Illustrates Friendly Feeling between Companies and their Representatives on Both Sides of the Border—Topics of Interest Discussed by Leading Men

At the insurance convention in New York on September 4th, 5th and 6th, members of the Life Underwriters' Association of Canada and of the National Association of Life Underwriters of the Untied States met in joint session. On the evening of the 3rd instant executive meetings were held and on Wednesday morning, the 4th instant, the convention proper began. Mention was made in *The Monetary Times* last week of the opening addresses, and the speeches of Mr. H. C. Cox, president of the Canada Life, and of Mr. T. B. Macaulay, president of the Sun Life, were given.

It was expected that Mr. Woodrow Wilson, President of the United States, would address the meeting, but he was unable to do so. Mr. C. Owsley, assistant secretary of the United States Department of Agriculture, spoke in his place.

Address by Clarence Owsley.

Mr. Owsley made a most eloquent and patriotic address, in the course of which the audience was brought to its feet many times to cheer his utterances. He said that the word international meant more to-day than ever before, and that, so far as life insurance agents were concerned, no body of men had been more useful and effective than it in the lines of work which the government had been forced into on account of the war. The United States could not and would not forget the debt it owed to the nations abroad which had fought the fight while we were prospering and profiting. Belgium would always be first for the way in which it had stood up against the invader; Great Britain, with Kitchener's army going forth to certain destruction with indomitable courage, and that country's navy, which had patrolled the seas from the icy north to the tropic south; France, which had sacrificed its thousands at Verdun, and Italy, which, through insidious propaganda and treachery, had been driven back. The debt to these nations which the United States owed could never be forgotten.

The speaker went on to say that in the primaries of the past thirty days every Congressman, with less than a dozen exceptions, had been endorsed on a platform which represented the enlightened opinion of the public at large on the real reasons for carrying on the contest now being waged and the righteousness of the cause. It is the duty of every citizen, he urged, to give to the utmost in the way of subscribing to loan issues, war savings certificates and all forms which will contribute to the winning of the war.

The speaker then referred to the problem which had been put before the United States of feeding the world, and pointed out that, while there were abundant crops, there was a danger that the loss of man-power, due to the practical cessation of immigration and the call for military service, might nullify all the increased acreage. Every person should work to increase his own efficiency, and in these days, he felt, it was almost treason for a person to employ someone to do things which he could do himself. Mr. Owsley concluded his talk with a ringing tribute to the valiant deeds of the French and British armies, and expressed the belief that within a short time a great advance would be made by the American forces, whose deeds, he felt sure, would equal—they could hardly excel—those of the Allied forces.

Hon. Hugh Guthrie's Remarks.

The next speaker was the Hon. Hugh Guthrie, solicitor-general of Canada, who delivered a wonderful speech in relation to the connection between the United States and Canada. Part of his remarks was as follows:—

Democracy is a term much used and much abused at the present time. It does not mean any particular form of government. The term expresses merely a man's right to think, to act, to choose and to decide for himself. Democracy is no vain or idle boast; it is no mere political theory, as Germany has long since found out, but it is to-day the vital living force which is binding the allied nations firmly upon the western front.

Peace will never come through German diplomacy. German diplomacy cannot be trusted. German diplomacy has proved itself to be nothing but a tissue of falsehoods and diplomatic treachery. Recently Secretary Lansing enumerated a long list of diplomatic treacheries. German deception has not always deceived its opponents; sometimes it has deceived Germany itself; and while the allied nations have committed many mistakes, many costly blunders, since hostilities first broke out, Germany herself has been the victim of many of her miscalculations. Germany never believed that Great Britain would take up arms to support the claim of Belgium, under her treaty rights. Yet no sooner did the violation of Belgian neutrality take place than Great Britain came to the front with all her might in men, money and ships.

Germany never believed that the United States would or could send an army of men to Europe in time to become an important factor in the great conflict. Yet to-day we find over a million and a half of the bravest of the brave standing shoulder to shoulder with other brave men from France, England and from Belgium, and thousands and tens of thousands are on the way.

Let Germany maintain her stand in Europe as it is marked to-day, by the lines of her army, and well may it be said that Anglo-Saxon ideals are trembling in the balance. It was the Kaiser himself, on his recent birthday, who said, when addressing his generals, "This war has become a war between the two ideals; it is a war between the Prussian ideal and the Anglo-Saxon ideal," and he said the question for us to decide is which one shall survive.

The Russian situation has been the gravest disappointment to the Allies. But the East is by no means all dark. India has proved steadfast—India, that has 400,000,000 British subjects that have withstood the blandishments, the offers and the threats of German propaganda, and has remained firm and loyal to the British crown. (Applause.) Egypt is secure. Great successes have been won in Mesopotamia and Palestine. So far their enemies have made no impression at Salonica, which is the key to the Eastern Mediterranean.

Afternoon Session.

The session was presided over by T. Wilson, president of the Life Underwriters' Association of Canada. George E. Vincent, president of the Rockefeller Foundation, was then introduced, and made a very fluent address on the topic, "The Health of Each the Concern of All." "At our entrance into the war," he said, "fifty years of individualism ended. There was a new era beginning requiring team-work and co-operation. In these days the individual is a negligible quantity as compared to the common cause of the people of the nation."

Health should not only be guarded against, but should also be aggressively encouraged and amplified. Stimulation of vigor and energy should be instilled in the healthy as well as those not so healthy. Insurance, by various scientifically prepared tables and statistics, has contributed valuable literature which has done a great deal to prevent sickness and promote and prolong health. It is time for us to think about our reconstruction after the war, such as problems of public health and life insurance. Health has to do with everything, having a vital effect on our country. We have made plans for our soldiers and sailors, but how about the members of our industrial army? We should make provisions for their future. It is up to every individual to do what he can to promote public health and safety conditions throughout the country.

A twenty-minute discussion on Mr. Vincent's speech was led by W. Lyle Reid of Ottawa, Canada, who stated that it is a fitting thing that the forces of Canada and the United States are joined in the common cause of making the world a decent place to live in.

Herbert C. Cox, president Canada Life, then read his paper on "Shortcomings Within and Without," printed in last week's issue of *The Monetary Times.*

Following Mr. Cox, the president introduced Harry L. Seay, president of the Southland Life of Dallas, Texas, and president of the American Life Convention for the current year. His address was received with a marked degree of attention, and was warmly applauded, not only for the serious

DIVIDEND NOTICE

The Bank of British North America

Incorporated by Royal Charter

The Court of Directors hereby give notice that an interim dividend for the half year ended 31st May last, of Forty Shillings per share, less Income Tax, being at the rate of eight per cent. per annum, will be paid on the 5th day of October next to the Proprietors of shares registered in the Dominion of Canada.

The Dividend will be payable at the legal par of exchange on the 5th day of October next.

No transfer can be made between the 21st instant inclusive and the 4th proximo inclusive, as the books must be closed during that period.

JACKSON DODDS,
Secretary.

thoughts it contained, but for the able manner in which it was delivered.

The final business of the day was the report of the executive committee.

Meeting on September 5th.

President Priddy, after an awkward half-hour delay, due to the non-appearance of speaker, called the meeting to order and introduced Dr. J. H. Kellogg, superintendent of the Battle Creek Sanitarium. He spoke on the relation of habits to life expectancy, and pointed out that schools should educate their students on the principles of increasing life expectancy. A commission might be appointed to study the habits of people, with the view of discovering their effect on the possible length of life which might result.

His address was somewhat extensive and technical, but many salient points were warmly received by the audience, even though a part did not agree with his arguments as to abstinence from tobacco and alcohol.

Following Dr. Kellogg the presidest introduced Henry Moir, actuary and director of the Home Life Insurance Company, and president of the Actuarial Society of America.

Reliable information on which life insurance companies might base their computation of premiums for war insurance cannot now be obtained, nor will it be available until after the war, said Mr. Moir. He referred to the present war as a selfish materialism of a deceiving Kultur against the spiritual elements of justice, goodness, and truth, and said that insurance, applied to war, involved a consideration of statistical analyses of war mortality, financial effect on the assets of corporations, and the probable social and economic development—that the work of science was to substitute facts for appearances and demonstrations for impressions.

As to the insurance risk in war, the speaker said, in order that scientific requirements might be met in computing premiums for war insurance, they must have as a minimum of information the number of men actually fighting, the number of casualties (deaths and wounded separately), and the time of exposure. Even in this broad form, he declared, reliable information could not now be obtained, and would not be available until after the war. Then there will be much more than the minimum—for they will be able to divide the exposures and the casualties so as to separate and analyze the war mortality by classes somewhat as follows: Infantry, artillery, cavalry, navy, and aviation.

He said that insurance men expected to find great differences between those branches of the service. Also, they will be able to separate the officers from the men, and probably be able to divide the officers of high rank and those of lower rank, the commissariat department from the fighting forces, etc.

In the meantime insurance men are groping around for all the information they can obtain. Out of the whole they are gradually developing a clear trend, which they can cautiously follow.

War and Mortality Rates.

The speaker then cited the effect of the war on the policyholders of one of the largest life-insurance companies of the world—the Prudential, of London—the experiences of this company among all its industrial policyholders for the year 1913, and the English life mortality rate (male), being average English mortality for the years 1910, 1911, and 1912. He showed that an enormous increase in the mortality rate as applied to all insured lives—whether in active service or not—was indicated.

Financial effects of the war were also dealt with in a broad way by Mr. Moir, who showed that the funds of life-insurance companies were affected in more directions than that of increased mortality. In this he touched on the depreciation of securities values, but said that it followed logically that after the war, when monetary affairs resumed their normal balance, the enhanced value of investments made during times of uncertainty would offset—perhaps more than offset—the depreciation or losses on those investments made prior to the war.

Touching on economic developments, he went on to say that the government insurance of soldiers and sailors would have a vastly greater economic effect than the framers of the first draft of the law ever imagined. It will educate millions of the brightest young men of the country regarding their intrinsic value to the community, he asserted, and will accustom them to think of their work in fitting figures, as well as a new foundation for future expansion, which promises so much for the nation in meeting the hardships of the fatherless household.

"A careful and analytical study of the scientific factors affecting life insurance would indicate that its prospects were never brighter than to-day," he said. "Yet we have reason for sincere thankfulness that its destinies and those of the world are not left entirely in the hands of men."

Speeches by Lady Delegates.

Miss Leonora M. Cowick, president New England Women's Life Underwriters' Association, opened the discussion, and stated that all companies should take up women departments. As men were being continuously taken for war service, more women should be in the field. The speaker favored compulsory life insurance, although not as a government measure. Women can work as hard as men, but the business requires efficient, high-class women as sellers. That the time devoted to life insurance as is devoted to other businesses is bound to mean success was strongly emphasized. She felt that the fraternal spirit of the association meetings was a great inspiration to those attending.

Mrs Jenny Watkins, the only woman member of the $200,000 Club of the New York Life, spoke of her nine years' experience in the field, and argued that the greatest opportunity for women to sell life insurance was at the present time.

Miss Constance Woodward, the leading woman member of the $250,000 Club of the Equitable Life of New York, spoke on the subject of "Women as a War Essential to the Life Insurance Business." Her argument was based on the ground that the depleted ranks of business men must be filled up. At the present time the United States has about two million men overseas, and two million women are now engaged in United States industries, including war work and other occupations. In this day all realize that only sales ability counts, while personal charm and hard-luck stories count for naught.

Tact and intuition of women, Miss Woodward said, will do a lot to disabuse the idea that life insurance agents are a nuisance. She believed that more women should be supplied with insurance, as they are, on the whole, easier to sell to than men.

Afternoon Session.

The afternoon session of the body was presided over by President Wilson, of the Canadian association, and the first speaker was George W. Perkins.

A strong appeal for the Red Cross was made by Mr. Lombard, who was followed by Mr. Carpenter, in a plea for a proper presentation of the subject of life insurance.

Sir Edmund Walker, president of the Canadian Bank of Commerce, then made an address on the subject, "Life Insurance, Bank Credits and Thrift." He dealt with the development of insurance from the time when insurers took risks on those who were called adventurers. Insurance is a great factor in credit, and a banker must be familiar with all forms of insurance. The modern world has become closely connected, but in all developments the principle of insurance has kept in touch with and protected every hazard. The death of the chief officer of a company can be compensated for by insurance, so that the organization will not be impaired financially. The speaker referred to the insurance of the late C. W. Peavey, which was carried for the protection of his business obligations. Economy, properly understood, is a fine art, and, like most fine arts, is generally rare. The speaker then went on to emphasize the need of economies in these war times, especially in connection with life insurance, and discussed to some extent the position of labor and capital which will arise at the close of the war.

At the conclusion of his formal address, Sir Edmund referred to the voluntary way in which Canada entered the war, stating that he was sure from the beginning that the United States would come to the defence of the rights of humanity. The Kaiser, he said, was the last representative of the Asiatic form of government, as represented by the claim of divine right to rule. The most English thing ever done was the American Revolution, and the British Empire exists to-day because of that, and its colonies and dependencies are more democratic even than is England itself. The language of the world, he said, is sure to be that of the great Anglo-Saxon race, who have won for the individual all human liberties from the days of Alfred the Great, over a thousand years ago.

W. Lyle Reid, of Ottawa, reported as Canada's representative of the International Council, a new body set up by the

AN ALLIANCE FOR LIFE

Many of the large Corporations and Business Houses who bank exclusively with this institution, have done so since their beginning.

Their banking connection is for life—yet the only bonds that bind them to this bank are the ties of service, progressiveness, promptness and sound advice.

236 Branches in Canada, extending from the Atlantic to the Pacific
New York Agency: 63 and 65 Wall Street
Bankers in Great Britain: The London Joint Stock Bank, Limited; The Royal Bank of Scotland

37

ational and Canadian associations. Mr. Reid stated that as it was only just getting on its legs there was little to report. It was hoped that after the war an international secretary might be chosen, that a representative of each body might sit on their respective legislative committees, and that the two journals now published might possibly be consolidated. Another question to be considered was that of a central point for the annual meetings, and for an arrangement of sectional divisions in which joint meetings could be held from time to time.

The convention closed with the election of the following officers: President, J. K. Voshell, Baltimore; vice-presidents, Warren C. Flynn, St. Louis; F. O. Eliason, St. Paul, and P. A. Wintermute, Calgary, Canada; secretary, Hiram M. Taylor, Wheeling, W. Va.; treasurer, W. M. Wood, Pittsburg.

CO-OPERATION IN SASKATCHEWAN

Co-operative organization in Saskatchewan has been making considerable strides during the past year. Among organizations of this kind are the Saskatchewan Co-operative Creameries, the Saskatchewan Co-operative Elevator Company, Limited, the Municipal Hail Insurance Association and the Wholesale Trading Department of the Saskatchewan Grain Growers' Association.

The annual returns from the agricultural co-operative associations show that during the year the number of shareholders has increased from 9,444 to 12,459, the invested capital from $92,940 to $151,805, the number of associations marketing livestock has increased from 23 to 35, and the number of cars marketed from 241 to 548. The value of the livestock marketed this year has been $1,050,285, as compared with $323,171 last year, and the value of the farm produce marketed has almost doubled. The aggregate turnover of the Associations has increased from $2,122,832 to $4,160,262.

EDMONTON TAX RATE GOES UP

The tax rate for 1918 in the city of Edmonton will likely be 30 mills, or 3½ mills more than for 1917. The increase is due to salary increases, and a reduction in assessment.

The following statement compares the rates with those of last year:—

Approximate Schedule of Tax Levy for 1918.

Purpose.	Amount required.	Mill rate, 1917.	Mill rate, 1918.
General municipal	$1,388,529.58	8.90	11.75
General debt debenture— Interest & redemption	884,358.02	9.50	9.75
Edmonton School District No. 7	715,000.00	....	....
Edmonton Separate School	90,000.00	7 75	8.50
Library board	....	.35	....
Discount allowance current taxes	40,000.00	....	...
	$3,117,934.48	26.50	30
Land assessment ..			$77,500,000
Building assessment ..			16,000,000
			$93,500,000
Business tax yield .			150,000
Income tax ..			135,000
			$ 285,000

The Turkish minister of finance has announced that Turkey has concluded a fresh loan with the German government for forty-five million Turkish pounds. The conditions are said to be identical with those of previous loans.

"It is more than ever necessary to take the long view," Sir William Goode, of the British Ministry of Food, told the Consumers' Council in reference to food production. "Food production," he said, "must be kept up to the highest possible quantity. Cheap prices to-day, if it means less food or no food to-morrow, is a fool's benefaction."

Insurance on buildings, $2,500; insurance on contents, nil; total insurance on buildings and contents, $2,500. Total amount of property at risk by fire, $256,200.

RURAL ONTARIO ORGANIZES

At a recent conference held in Toronto the Rural Municipal Association of Ontario was formed. About 60 reeves of rural municipalities in Ontario were present. The objects of the association was stated as follows: "To guard the interests of the rural population of Ontario in matters of taxation as affecting rural municipalities; to be similarly prepared as to other questions of national revenue that might affect their interests; to advise and represent the farmers in respect to the fixing of farm product prices; to advise as to the best methods of marketing farm products and to make recommendations from a rural municipal standpoint upon all matters affecting rural interests in Ontario.

The first payment on account of the Russian indemnity to Germany was made on the 7th inst., according to a recent despatch from Denmark. It amounted to 250,000,000 roubles, one-half of which was paid in gold and the remainder in notes.

During the month of August the Grand Trunk Railway transported the total of 8,371,521 bushels of grain, carrying the bulk of this vast tonnage from Great Lake ports to Montreal for export. The cars required to move this traffic numbered 4,653, showing the loading average of 1,799 bushels per car. The amount of grain transported by the road in August surpassed the best previous records by about half a million bushels.

LLOYDS BANK AMALGAMATION

Union of Four Institutions Marks Close of Period of War Adjustment—New Conditions Will Require Greater Strength

Lloyds Bank, Limited, in their monthly report for August, explains the amalgamations in which it is concerned as principal as follows:—

From the outbreak of war up to the end of last year the question of bank amalgamations became more or less academic in character. The problems connected with the war demanded the pressing attention of our bankers, and ordinary business problems had, of necessity, to take second place. Towards the end of 1917, however, with war questions partially solved and consequent less insistent, and with peace issues and after-war problems having to be faced, the thoughts of those responsible for the direction and management of the banking policy of this country were more actively diverted to the necessity of making all necessary preparations for meeting the difficulties that will be encountered during the transitional period, and of coping with the many new factors that the after-war situation will undoubtedly bring. Hence there has been witnessed during the present year a drawing together of various institutions, as it is only a big bank that is capable of doing big business.

After-war trade will be on a big scale, and will demand large institutions with powerful resources if the trade is to be financed in adequate fashion. First of all, it is evident that help will be required at home to cope with the demands that will eventuate for the purposes of restoration and the rebuilding of the fabric of industry destroyed or injured by war conditions. Secondly, there is the trade with our overseas dominions and foreign countries to be cared for, trade that of necessity has had to be dropped during these years of war. And beyond all this, there are the needs of foreign countries to be considered, which, though not actual belligerents, have experienced the repercussion of war effects. Our enormous foreign trade has been built up through our being willing to lend and export capital, and future demands, on a large scale, must be met if our foreign trade is not merely to be maintained, but grow. Moreover, it must not be forgotten that in practically all directions competition will be much more severe than it has been in the past. For example, the entry of the United States into the war, and the transformation of its world outlook to world-wide internationalism will introduce a new factor in world trade and industry. In addition, the various neutral nations, though undoubtedly severely hit in many ways by war conditions, have strengthened their position in some directions, and will bid very actively for trade.

It may thus be anticipated with reason that competition will be exceedingly severe and keen. It thus behoves us to take all possible steps if this country is to maintain its commercial supremacy. Over and above all this, there is the evident desire of German banks to place themselves in as strong a position as possible, by means of a series of amalgamations, to maintain and increase the hold which Germany and German trade had obtained before the war on world industry. It is not surprising, therefore, that British bankers should take steps to counter such action, and that the situation shoud have brought about a recrudescence of amalgamations in England. It evidently demanded that British banks should be prepared to meet the menace, and that to do so they should be as strong as possible. And in perhaps no other industry is it more true that union is strength than in banking. Our bankers have thus done well to join forces and so present as strong a front as possible.

Extends Business Abroad.

We have pleasure in presenting our readers with the details of a scheme which the directors of Lloyds Bank have arranged with the idea that the bank shall take a worthy part in the after-war conditions that the country will be called upon to face. The union of forces thereby consummated may fairly be claimed as the most important arrangement that has ever taken place throughout the whole history of British banking, first by reason of the magnitude of the scale on which the scheme is carried through, and secondly, on account of the nature of the plan and its comprehensiveness. The magnitude may be gathered from the fact that Lloyds Bank and its allied interests form one of the largest and most important banking institutions in the world. The nature and comprehensiveness of the plan will be understood from the statement that instead of being a purely English undertaking, the bank may now be regarded as an international institution, with its influence extending northwards into Scotland—hitherto entirely untouched by English banks—and southwards and westwards as far as Argentina, Uruguay, Brazil and Chile, while by reason of previous arrangements, it is interested in France and Italy—in the former country through the formation of a French auxiliary, Lloyds Bank (France) and National Provincial Bank (France), Limited, and in the latter through the formation of the British Italian Corporation of which Lloyds Bank was a joint founder and is a principal shareholder.

It will be realized therefore that the scheme provides for a union of forces between Lloyds Bank, the Capital and Counties Bank, the National Bank of Scotland and the London and River Plate Bank.

A New Departure.

It may be added that the figures of the capital and reserve of each bank whose shares are proposed to be acquired will remain unchanged, while the paid-up capital of Lloyds Bank will be increased to about £9,000,000 and its published reserve to the same amount, and the number of its home branches will be about 1,350, all of which will, as a consequence of these arrangements, be in direct touch with many places abroad of the greatest importance to British overseas trade. The percentage of capital and reserve to current and deposit accounts will be increased from 5.2 to 8. In view of the future of British home and overseas trade and their close interdependence, the directors of Lloyds Bank believe that the arrangements they are now announcing will commend them-

selves to the business community as being in the general interests of the industry and commerce of the country. In this connection local colonial and foreign departments have been, or shortly will be, opened in the chief cities of the United Kingdom, where all foreign business can be dealt with promptly by local foreign exchange managers.

Possibly, however, the greatest interest will be taken in the announcement of a new departure to be made in connection with the present scheme.

The directors recognize that the magnitude of these developments and the increased work and responsibilities which they will entail render advisable the adoption of special measures for strengthening the management of the bank.

With this object they have decided to appoint a general council, composed of representatives of Lloyds Bank and the associated banks, to whom will be added a secretary with special qualifications for the post. The duties of the council will comprise the gathering and recording of intelligence and keeping in the closest possible touch with the changing financial and commercial conditions both at home and abroad, so that they may be in a position to advise the board in regard thereto.

In the table herewith is set out a statement, according to the last published figures, of the liabilities and assets of the separate institutions comprised in the scheme, from which it will readily be possible to arrive at an estimate of the strength of the union of forces to be brought about and the important position secured by Lloyds Bank.

FOOD SHORTAGE MERELY POSTPONED

The Canada Food Board says: Never, perhaps, since the opening of the war have the Allies had more sound reason for optimism than at the beginning of this last quarter of the year 1918. The enemy has been defeated in a succession of battles on the western front. His successes of the spring have been neutralized and his campaign upset. A million and a half men have been added to the Allies' military resources from the United States. The submarine menace has greatly declined. The number of ships for carrying supplies has been greatly augmented. The efforts of this continent to keep the soldiers fed and stave off threatened starvation in allied Europe until the new harvest became available has been gloriously successful. And further, the harvest of Great Britain, of France and of Italy have, in some measure, overcome the disadvantages reported earlier in the year by reason of weather conditions, and are being safely garnered by the help of women, boys, civilians from the cities, prisoners of war, and soldiers released from active duty at the front for short periods. Greater than all these factors of success in "food fighting" will be the magnificent harvest being reaped by farmers of the United States. This year's harvest promises to be the greatest on record.

It cannot be too emphatically urged, however, that the necessity for conservation of food and increased production of food will continue in this country while the war lasts and for some time afterwards. The encouraging news as to the release of the strain which was viewed so seriously earlier in the year should not lead us to relax our efforts now except in so far as the Canada Food Board may revise the food regulations as circumstances warrant from time to time. The results which have been obtained on this continent by the use of substitute foods for those required overseas are the basis of the optimistic outlook of the allied food situation in Europe to-day. The situation of the immediate future is based on the continuation of those efforts. The food reserves of the world at war have been exhausted. The 1918 crops in allied countries must be conserved for the future and our efforts to produce foodstuffs in greater abundance must not be relaxed.

There is grave danger always when a crisis is passed of falling back into the condition from which we have escaped through the relaxation of our vigilance and our energy. The food controllers of the Allies have warned us of this danger. We should be warned also of persons who, well meaning, but nevertheless in the interest of the enemy, urge that all such efforts to conserve and produce are now superfluous and that the danger is passed. The danger is not passed. But we have found a way of overcoming it, and we must follow that safe path until the war is over.

LOOKING TO NORTHERN BRITISH COLUMBIA

Immense Hinterland, With Great Resources, Awaits Development

Back from a two-weeks' trip which took them along the line of the Grand Trunk Pacific Railway from Prince Rupert to Prince George and thence south along the route of the Pacific Great Eastern Railway, the government road, to Quesnel and on to Ashcroft, Hon. J. W. de B. Farris, attorney-general, and Hon. J. H. King, minister of public works, recently expressed themselves as pleased with the outlook. Both ministers were enthusiastic over the immense potentialities of the vast territory served by the two railways, its possibilities as a future home for hundreds of thousands of settlers, and the vast natural resources which are awaiting the influx of man power to develop what is to-day practically virgin territory.

It was Hon. Dr. King's first visit to centres along the Grand Trunk Pacific line and to territory which will be served by the Pacific Great Eastern. As minister of public works he paid first attention to the needs of the territory from the standpoint of his department, and he stated yesterday that undoubtedly as settlement advanced the government will have to spend large sums in providing those facilities required in progressive communities. Even to-day the funds at the disposal of the government for necessary public works in that section are wholly inadequate and as time progresses the demands upon his department will steadily increase. But with the advent of settlers the government will undoubtedly, he said, keep abreast of the demands and seek to its utmost to encourage settlement.

Accompanying the two ministers was Hon. T. D. Pattullo, minister of lands, who, with Hon. Mr. Farris, met Hon. Dr. King at Prince Rupert, the latter having been on a trip to Skagway with his wife and his father, Senator King.

The three ministers were together as far as Prince George, en route stopping at Hazelton, Smithers, Vanderhoof and other points and addressing meetings at which they outlined the government's policy in respect to development and discussed with the residents of those centres and settlers from nearby points the problems peculiarly pertinent to the district.

Hon. Mr. Farris and Hon. Dr. King made a leisurely trip south along the proposed route of the Pacific Great Eastern to Quesnel, and paid a visit to Harper's camp, where gold dredging operations are under way, a company of Victoria men now operating at that point.

"The great need of that country is settlement, and there is, to my mind, no doubt that after the war there will be a great influx of settlers into the areas now awaiting development," said Hon. Dr. King.

Hon. Mr. Farris saw a great future for the Pacific Great Eastern line once it is completed through to Prince George. The portion still to be constructed from the present end of steel north of Clinton will traverse a wonderful country of immense possibilities. With settlers of experience and able to take hold of development the line will profit from the traffic which it will have tributary to it. It is, the attorney-general stated, necessary to have the line continued as soon as possible to Soda Creek, thus connecting with the navigation on the Fraser River and giving a through service by rail and water to Prince George.

Industries Active.

Hon. Mr. Farris stated that there is marked activity in the lumber and fishing industries at and in the vicinity of Prince Rupert and settlers are daily arriving at points along the line of the Grand Trunk Pacific looking for land. Were it not, he stated, for the policy of the government now actively launched and with the increased taxation placed upon wild lands and the government's determination to enforce that taxation measure, he believed that in a comparatively short time large areas of the lands now held en bloc by private individuals would be thrown open to settlement.

Both ministers stated their observations indicated that throughout the territory traversed by them there is general satisfaction with the government's policies for the development of the province coupled with its determination to reorganize its financial position.

More than 300,000 women are now engaged on the land in Great Britain.

SOUTH VANCOUVER BALANCE IS REVERSED

Special Examination of Municipality's Finances Reveals Laxness in Accounting and Management

When the auditors examined the accounts of the municipality of South Vancouver as at the 31st December, 1917, they reported a considerable surplus. Since that time, however, a commissioner has been appointed by the Provincial government to look after the affairs of the municipality, in the person of Mr. F. J. Gillespie, and auditors who made an investigation under his direction, have reported a deficit of $1,340,752.

A number of ratepayers of the municipality, not being satisfied with the manner in which its business had been handled, recently requested that an officer of this kind be appointed by the Provincial government. This has been done and the commissioner supplants the council, mayor, school board and is, in fact, at the head of every department. In order to obtain the most complete information regarding the financial position, he had a Vancouver firm of auditors especially investigate conditions as at the 30th April, 1918.

According to their report the amount of tax arrears now outstanding is $836,885. At the end of 1917 it was $888,244, so that a reduction of over $50,000 has been made. Of the present arrears $527,913 has been hypothecated to Messrs. Spitzer, Rorick Company, of Toledo, Ohio, as security for a loan of $450,000 payable in March, 1920. The sum of $177,594 has been collected and placed in trust on this account, leaving a balance of $272,405 to be collected. In addition to the amount owing to Spitzer, Rorick & Company, there is also a shortage in the sinking fund of $260,268, which must be made good, and unexpended balances on by-laws amounting to $192,474. These unexpended balances were transferred to current account and used for other purposes. There is also a considerable amount of water arrears.

The allotments of the sinking fund payments for the years 1915, 1916, and 1917 were not made. These amount, with accrued interest, to $227,574. Moreover, a considerable portion of the fund was invested in mortgages at 5 per cent. and 6 per cent. These are depreciated in the opinion of the accountants, by $32,693. It was, in fact, found that one property on which the municipality holds a mortgage was sold for taxes in the last tax sale. The amount required for sinking fund at the 30th April, 1918, was $421,546, whereas the actual assets in reserve for this account were only $161,278.

South Vancouver also has a temporary loan from the Canadian Bank of Commerce for about $130,000, which was secured in order to pay debenture coupons. The municipality owns lands purchased at its own tax sales to the amount of over $150,000.

The reversal from a surplus to a depreciation is, therefore, partly accounted for by these corrections in the statement of sinking fund, etc. Another large item was found in the statement of the school board. Depreciation on account of the school system was written off totalling $377,995.

The following are some of the figures as given by the auditors:—

Assessed value for taxation, 1917		$15,356,334
(Reduced from $21,339,524, 1916 taxable assessment).		
General debenture debt	$5,901,880	
Local improvement debt	784,285	
		6,686,165
Less property owners' share local improvements	$ 337,503	
Less sinking funds	418,271	
Less waterworks debt	1,013,050	
		1,768,824
		$ 4,916,331
Unsold bonds included in general debt	$ 400,000	
Unsold bonds included in local improvement debt	589,903	
		$ 989,903
Against which treasury bill, maturing 1918, has been issued		790,000

Tax Rate has Advanced Steadily.

	Gross assessment (exclusive of exemptions).	Improved land tax (mills).	Wild land tax (mills).
1911	$30,626,780	12.50	22.50
1912	38,995,285	12.50	22.50
1913	41,780,328	16.75	26.75
1914	43,815,311	17.50	27.50
1915	*37,174,205	*23.60	33.60
1916	*31,048,732	*27.00	47.00
1917	*24,737,424	*31.40	51.40

---

*On reduced assessment.

Area, 9,200 acres. Population, about 25,000.

The feature of the present tax levy is a tax on improvements. The previous levy fell severely upon holders of vacant land, most of whom were not residents. Those who lived in the municipality, on the other hand, and enjoyed its facilities and excellent educational system, paid no more than the non-resident, in spite of the fact that they had handsome and expensive houses and other improvements.

The commissioner required the present year's taxes to be paid not later than August 31st. He advises *The Monetary Times* that the receipts up to the close of the rebate period have been $341,000, or $100,000 more than up to the close of the rebate period last year.

CAPITAL AFTER THE WAR

The Bank Review for August 31st says: Many people are endeavoring to decide or ascertain what securities will be most likely to advance after the war, or at least will not decline unwarrantedly. If the theory of a period of reaction and cessation is correct, capital will undoubtedly become abundant for a time and will actively seek safe investment in securities with a fixed return and as advantageous a yield as can be obtained.

Under this competition of capital, we would expect to see rates of interest decline, and good bonds, including foreign securities, rise—perhaps rapidly. Safe stocks with assured dividend disbursement would be sought after, and those answering this description, which are paying high fixed dividends, should, it would seem, be most desirable.

PROVINCE OF QUEBEC FINANCES

The Hon. W. G. Mitchell announced at the government offices recently that the ordinary receipts of the province of Quebec for the fiscal year ending June 30th 1918, amounted to $13,606,390.97, and that the ordinary and extraordinary expenditure amounted to $11,671,832.69, so that the surplus of ordinary receipts over ordinary and extraordinary expenditure last year is $2,134,558.20. Out of this was paid the sum of $625,000, being the balance of the payments made by the government of the province of Quebec to the Canadian Patriotic Fund on account of the subscription of $1,000,000, which leaves a surplus over and above all ordinary and extraordinary expenditure and payments to the Canadian Patriotic Fund, of $1,509,558.28.

The ordinary receipts were particularly large due to the government having received the sum of $3,336,547.84 over the estimate in succession duties, the receipt of which, during the fiscal year, is one of the reasons for the very large surplus, but it is felt that the province is fortunate in being able to show such a substantial surplus, as it will enable the government to continue its expenditures on the public service, particularly in aid of agricultural production, colonization, education and good roads, without it being necessary for the province to borrow at the very high rates of interest prevailing at the present time.

Under the plans of the allied food controllers at least 70 per cent. of the deficiency in essential foodstuffs of the allied countries in Europe must be supplied from North America because of the short ocean haul as compared with that from other available food markets.

GREAT FUTURE FOR MARITIME SHIPPING

Lack of Drydock Facilities Has Forced Much Traffic to United States Ports

Immediate provision for additional drydock facilities at Halifax to permit of the fullest utilization of ship tonnage in the transportation of troops and supplies to Europe is an urgent need of the hour, according to Mr. Roy M. Wolvin, managing director of Halifax Shipyards, Limited, who has made a personal study of conditions on the Canadian Atlantic coast. Discussing the question recently, Mr. Wolvin said:—

"The port of Halifax is experiencing an era of tremendous activity. Its commerce has grown by leaps and bounds, or from an entered tonnage of 4,000,000 in 1914 to an entered tonnage of 17,000,000 in 1917. For the first six months of this year it exceeds 12,000,000 tons. In addition to its commercial trade, Halifax, as the chief British naval centre on the Atlantic coast, has had to overhaul a large number of war vessels of every character.

"It is a pity that the facilities for caring for this great tonnage are not more extensive. Canada's part in the war would be more effective if we could take care of the repair needs of the many ships that enter our harbors. The financial loss to Canada, too, must be very great. All told, it is estimated that at least 20 vessels of an average gross register of 7,000 tons have been forced to dock in American yards because of the lack of facilities at Halifax and other Canadian Atlantic ports, not to mention regular liners or tramp cargo carriers that would utilize the facilities of Canadian harbors if they were existent.

Vessels Sent Away.

"The S.S. 'Ockenfles,' one of the German vessels requisitioned by the United States government, which ran aground on the Nova Scotia coast, had to be taken to the United States because of the lack of drydock facilities at Halifax. Another boat, the 'Pequot,' a vessel of 9,000 tons dead-weight, salved by the Maritime Wrecking and Salvage Company, was sent to an American yard for the same reason, as also was the 9,500-ton 'Sewall's Point,' owned by the United States Shipping Board. The S.S. 'Imo,' whose collision with the 'Mont Blanc' resulted in the tragic Halifax disaster, was repaired in New York, and the 'Curaca' of 10,000 tons, also damaged in the explosion, was towed in what was generally believed to be an unseaworthy condition right past the Halifax drydock to another New York plant. The S.S. 'Matanzas' was in the Halifax drydock for 60 days or more having temporary repairs made to her in the shape of a wooden bow to permit her to get to New York, while many other vessels have been drydocked for repairs of a temporary character. It is needless for me to point out the risk incurred by vessels that have to put out to sea in damaged condition, nor the serious loss to the Allies in the withdrawal from trade, in these days of ship shortage, of so many large steamers.

'I certainly would not think of criticizing the government in the matter of providing drydock facilities. On the contrary, I know that in this regard the Dominion is very far advanced. We have very large floating drydocks at Prince Rupert and Montreal, two large graving docks at Levis—one of these larger than any on the continent—one large graving dock at Halifax, and only recently the government has announced that it has let contracts for the construction of a still larger graving dock at St. John, which, however, will take three years to build. Canada's far-sighted policy has provided this country with drydock facilities which would have been quite adequate to her need in peace time, but conditions today are abnormal.

"As for Halifax shipyards, I can state that our graving dock is now working to capacity on night and day shifts, and we are employing twice as many men as at any previous period.

"We must face the fact that the St. Lawrence will be closed for five months this winter, and that we will then have only our two Atlantic ports to take care of our huge war tonnage. This war work must not be permitted to slow up, and it will be only by immediate action in providing additional facilities at Halifax, that we will be able to carry out the maximum programme so necessary for the success of the Allied armies on all fronts."

LABOR DISPUTES IN CANADA

Industrial Disputes Investigation Act is Not Always Effective—Solutions of Problems are Various

The Department of Labor at Ottawa, in its report on Proceedings under the Industrial Disputes Investigation Act for the year ended March 31st, 1918, says:—

The administration of the Industrial Disputes Investigation Act, 1907, presented during the year no feature calling for special comment. Thirty-six applications were received and 20 boards were established. The proportion of boards to applications was smaller than usual, many of the disputes having been, after reference to the department, arranged amicably without the establishment of a board; in several such cases the adjustment was effected with the aid of a departmental officer. In other cases, where the machinery of the statute was not found applicable the dispute was referred to a Royal Commission and the threatened strike was averted, save in one case where, before the inquiry could commence, a strike, fortunately destined to be of brief duration, was declared. One other strike only occurred during the year in cases referred and this was of minor importance in an industrial sense. Several of the disputes dealt with involved large bodies of employees and powerful unions.

Reference was made in the report of last year to the extension of the scope of the act of order in council under the War Measures Act to disputes in all industries engaged in war work. The amendment has remained in effect and during the year one board was established in connection with a dispute which involved war work, renewed negotiations between the parties rendering, however, inquiry by the board unnecessary.

Disputes affecting railway industries were more numerous than usual; but while 14 applications were received, it became necessary only to establish six boards. No strike occurred in the industries arranged.

No very important dispute in the coal-mining industry came before a board during the year, but shortly before the close of the fiscal period applications were received from different sections of the employees of an eastern coal company; the employees being in this case divided as between two unions, the dispute was referred to a Royal Commission. This action was subsequent to the close of the year, but it is satisfactory to be able to add that the efforts of the commission were successful in adjusting the dispute. In the Crow's Nest Pass region there was considerable friction and some loss of time from strikes. No procedure under the Industrial Disputes Investigation Act took place. Work was being carried on under an agreement effective until March 31, 1917, but the increasing cost of living caused demands from the men for increased wages. Officers of the department assisted in the adjustments which were effected. The agreement terminated simultaneously with the fiscal year, and a strike followed, which lasted about three months, the government, in June, appointing a director of coal operations with extensive powers over the affected district.

Several disputes affecting telegraph and express workers were dealt with during the year and were in all cases satisfactorily arranged.

The act continued during the year to be the occasion of much inquiry and discussion in the United States. Communications received indicate frequent inter-school and inter-college debates in various phases of the question of industrial disputes and their settlement, in connection with some aspect of which the department is requested to furnish information as to the operations of the Industrial Disputes Investigation Act. Two investigators from the United States, Mr. Ben M. Selekman, of the Russell Sage Foundation, and Mr. B. M. Squires, a special agent of the United States Bureau of Labor Statistics, visited the capital and made inquiries in some detail. Their reports on the subject recognize the extent to which the administration of the statute is interwoven with the conciliation work of the department, but the investigators seemed dubious of the value of such a law in the United States.

In Liverpool, England, a plant has been installed for the utilization of fish waste, and the fats obtained therefrom find a ready sale at about $400 per ton. A meal made from the residue and used for feeding live stock and poultry retails at over $100 a ton.

BRITISH WAR EFFORTS

The British government is spending $34,930,000 per day on war activities, according to a recent announcement. Its national debt has increased during the past four years from $3,225,000,000 to $39,900,000,000. The population of Germany is half as large again as that of Great Britain. For Germany's largest loan sums of one shilling were accepted, while in Britain the minimum subscription was fifteen shillings, nevertheless the record number of subscriptions to the German war loan was 5,927,900, as against 5,089,000 to the British loan.

Before the war the people of Great Britain paid about $1,000,000,000 a year by way of taxation. To-day they pay annually $3,270,000,000. For her third war loan Great Britain raised $5,000,000,000, a sum equal to nearly half her entire national income in 1914.

EXPROPRIATION OF SUBURBAN RAILWAY PROPOSED

In connection with the proposed expropriation of the Metropolitan Railway within the city limits by the municipal corporation, the city is to have the right to examine the books of the company for the purpose of ascertaining their assets and liabilities. This decision was reached by the Ontario Railway Board at the parliament buildings recently, and the hearing was adjourned sine die. There was considerable argument between Mr. I. F. Hellmuth, representing the Toronto and York Radial Railway Company, and Mr. Irving Fairty, of the city solicitor's department, before the board decided to issue an order, prepared by Mr. Fairty aud submitted to Mr. Hellmuth, making provision for inspection of the company's books. In the event of the representatives of the company and the city disagreeing, the Railway Board will settle the differences.

MUNICIPAL BOND MARKET

The Monetary Times Weekly Register of Municipal Activities and Financing

New Liskeard, Ont.—Messrs. Brent, Noxon and Company, of Toronto, have been awarded a block of $4.000 6 per cent 10-instalment bonds.

Hamilton, Ont.—The board of education has proposed an expenditure of 500.000 in connection with new schools. Members of the council declare that this will have to be provided by next year's council.

Winnipeg, Man.—A syndicate, comprising Messrs. Wood, Gundy and Company and the Dominion Securities Corporation, has purchased the balance of a $1,000,000 issue of Greater Winnipeg Water District bonds, amounting to $609,100. The first block of $390,000, consisted of 5 per cent. bonds due July, 1923, and the balance, 6 per cent. bonds, due August, 1923.

Edmonton, Alta.—Final estimates for 1918 were considered and passed by the city council on August 30th, and, unless something radical happens to change the figures presented to the council between now and the next meeting, when the tax rate is to be actually struck, the rate for this year will be 30 mills. In addition, there is the one mill imposed by the government to cover the patriotic levy, which will bring the rate to 31 mills. The rate last year was 26½ mills. This will include the tax on land and improvements, but will not cover the business tax and the income tax, which will be levied separately, and in addition.

NEW BRUNSWICK SELLS BONDS

The province of New Brunswick has sold a block of $200,000 6 per cent. 20-year debentures. This is the issue which was offered for sale direct to investors recently. The proceeds will be used for road purposes.

MUNICIPALITIES TO BE CONTROLLED

An important change in the existing relationship between the provincial government and the municipalities in British Columbia whereby a government-appointed body, to be known as the Local Government Board, will have supervision over the various municipal councils in their carrying into effect the provisions of the Municipal Act is contemplated. This body will also, it is expected, exercise the duties of a Public Utilities Board, a body which, it has been recently announced by Attorney-General Farris, will be provided for by legislation to be brought down at the next session of the legislature.

The appointment of the Local Government Board has been under consideration for some time, and, it is stated, will be one of the chief recommendations of the report which has been compiled by Municipal Inspector Baird and Mr. F. A. McDiarmid, who have been of late making a revision of the Municipal Act with a view to bringing its somewhat contradictory provisions into harmony, and generally revising a measure which, because of the frequent and wide amendments which have been made to it from time to time, is in a condition which makes it at once unwieldy and unsatisfactory.

At the forthcoming annual convention of the British Columbia Union of Municipalities, to be held at Penticton, these recommendations will be considered and the principles involved therein discussed. The opinion of the convention upon the recommendations will be forwarded to the government, and at the next session of the legislature a new act, embodying what changes the government may deem advisable will be presented to the House.

A Local Government Board would have general supervision over the municipalities, its duties being to see that all steps taken by the municipalities in carrying on business were properly taken, at the same time that the municipalities, under such supervision, would have wider powers of [illegible]

VICTORY BOND DEALING REDUCED

On Saturday, the 7th instant, the committees in charge of the Victory Loan trading announced that after noon of that date they would cease to make sales. The object is to conserve funds for the coming loan. They will, however, purchase small lots from holders who need to turn them into cash. The price they will pay remains at 99 and interest.

VICTORY LOAN PLANS IN SASKATCHEWAN

On September 3rd a mass meeting was held in Regina, Saskatchewan, attended by representative men from all parts of the province, and a committee elected to have charge of the coming loan campaign in the province.

Last year a somewhat different system was adopted in the formation of the local committee, due to the fact that there was not enough time to do the work in a democratic way. Under the conditions which exist it is recognized that a better organization will be required this year. More work will have to be done and more complete devotion obtained.

In all the districts of the province mass meetings will be held for the appointment of the local committees, with which the central committee will have nothing to do.

It is expected that the cost of raising the money will be reduced this year. Members of the general committee will give their services without cost for the undertaking.

PRINCE ALBERT FINANCE

Recommendations made by Commissioner Yorath, of Saskatoon, re Prince Albert finances include the revision of assessed value of land and increase in assessment of improvements from 15 per cent. to 45 per cent. of their value; that business tax be increased and rental tax instituted; that payment of tax arrears be spread over period of years, provided instalment and current taxes are regularly paid; that current bank loan be paid off as arrears are collected, and that bank repay to city the amount of the collections for sinking fund which were used to reduce bank loan; that a special reserve be established with sinking fund moneys already collected and levied, to repay earlier-maturing debentures.

FREDERICTON READY FOR FINANCIAL DRIVE

A large and representative gathering of business and professional men was held recently in Fredericton, N.B., under call of J. D. Palmer, district chairman of the Victory Loan Committee, to organize and discuss plans and methods for the forthcoming loan campaign.

All present were awake to the importance of the work in hand, and all pledged their loyal, hearty support to the work that must be done. A most credible showing was made by Fredericton in the Victory Loan drive last year, and, by hearty co-operation with a disposition to hustle, all present were of the opinion that a better record can be hung up this season.

The chairman of the meeting, J. D. Palmer, called upon Mayor Hanson, a member of the provincial committee, who recently attended a meeting of the committee in St. John, to set forth a general outline of requirements in the way of work and sacrifice. The mayor told those present that if each mans' business and home life is to be kept in its present state of security there must be a whole-hearted effort on the part of all to make the next Victory Loan drive greater than an average success.

The success of last year's drive in the district, according to opinions expressed, was largely due to the efficiency of the executive which they were fortunate enough to have. An equally efficient one was urged for this year, and it seems the men present chose wisely when the following were named: Mayor Hanson, J. J. F. Winslow, Arch. Fraser, W. G. Clark, W. F. Farrell, C. C. Jones, J. S. Neill, Sr., A. F. Randolph, C. D. Richards, F. B. Edgecombe, J. J. McCaffrey, H. S. Campbell. Mr. Bidlake was appointed secretary of the executive.

The first thing to be done will be an extensive educational campaign carried on throughout York. Because of political activities last year during the period of the Loan drive the committee was unable to carry their work consistently throughout the county districts. More attention will be given them this year.

GROWTH OF MUNICIPAL ASSESSMENT

An Address Before the Ontario Municipal Association Convention at Toronto, August 28th, 29th and 30th

BY J. C. FORMAN,
Assessment Commissioner, Toronto.

I have been requested to address you on the subject of "Municipal Assessment." It seemed to me that the subject was one that is very familiar to so many of you and I was at a loss how to present the same in a manner to interest this meeting. It occurred to me, therefore, that perhaps a brief reference to the methods of assessment as adopted in the earlier years (1834) to the present year, with a submission of proposed amendments to the present act, would meet with your attention and so, without further preamble, I will now go on with that part of the programme allotted to me.

In 1834, the first year of incorporation of the city of Toronto, the population was 9,254. The value of the real and personal property for that year amounted to £180,496. The tax rate was fixed at three pence in the pound. The revenue from taxation thus equalled £2,331. These figures are equivalent to an assessment of $907,613; the tax rate, 12 5/10 mills on the dollar; the revenue, $11,345.

The very crude system, as it would now appear, of the assessment then in vogue, as provided in Chapter 7 in the 59th year of George III., 1819, came into force January, 1820. and which applied throughout the province of Upper Canada.

This act fixed the rateable real and personal property as follows:—

"Every acre of arable, pasture, or meadow land, twenty shillings; every acre of uncultivated land, four shillings; every town lot (in York one acre), fifty pounds; every house built with timbers squared or hewed on two sides, one story in height, with not more than two fire-places, thirty pounds; every additional fire-place, eight pounds; every dwelling house built of squared or flatted timber on two sides, of two stories in height, with not more than two fire-places, thirty pounds; and for every additional fire-place, eight pounds: every framed house under two stories in height, with not more than two fire-places, thirty-five pounds; and for every additional fire-place, five pounds; every brick or stone house of one story and not more than two fire-places, forty pounds."

These rates increased, so that a brick or stone house of two stories in height was rated at sixty pounds and every additional fire-place (over two) ten pounds. Grist mills were rated at one hundred and fifty pounds and over; saw mills one hundred pounds; every merchant's shop, two hundred pounds; warehouses, two hundred pounds. Horses of the age of three years and over, eight pounds; oxen of the age of four years and upwards, four pounds; milch cows, three pounds; cattle from two to four years of age, twenty shillings; four-wheeled carriages kept for pleasure, twenty-five pounds; two-wheeled carriages kept for pleasure, fifteen pounds; provided, however, that any property, goods or effects or things herein mentioned which shall belong to or be in the actual possession or occupation of His Majesty shall not be assessable.

The assessors were required to make an annual assessment, "so that every person shall be assessed in just proportion to the list of his, her or their rateable property, real and personal, according to the rates hereinbefore specified."

"If any person or persons liable to the payment of the rates by this act imposed shall neglect or refuse to deliver in a true list of his or her rateable property, real and personal, to the assessors, in the manner and form herein specified, or shall wilfully mis-state such rateable property, every such person or persons shall forfeit and pay a sum of money, not less than two pounds or more than five pounds for the first neglect or refusal, and ten pounds for the second, to be levied by distress," etc.

Provision was made for the sale of land for unpaid taxes.

Many amendments having been made to this act, the same was consolidated in 1853 and again in 1859. If we now advance a period of twenty-five years from the date of incorporation, we have the "Consolidated Assessment Act of Upper Canada," passed in 1859. A brief reference to the act seems advisable, so that it may be compared with the Assessment Act, R.S.O., 1897, the latter act being in force until the present act, which came into operation in 1905. Land and personal property were therein defined as follows:—

3. The terms "land," "real property" and "real estate" respectively include all buildings or other things erected upon or affixed to the land, and all machinery or other things so fixed to any building as to form in law part of the realty, and all trees or underwood growing upon the land and all mines, quarries and fossils in and under the same, except mines belonging to Her Majesty.

In passing, I may say that the same definition, word for word, continued in the statues until the year 1903, a period of forty-four years.

4. The terms "personal estate" and "personal property" include all goods, chattels, shares in incorporated companies, money, notes, accounts and debts at their full value, and all other property, except land and real estate and real property as above defined and except property herein expressly exempted.

Mention is not made of the word "income" in the inclusion of what is termed "personal estate" and "personal property." Income, however, was liable to assessment and a separate column in the roll so provided, although no definition of what constituted income was given.

In the assessment of income, where the same exceeded $200 per annum, the total income became assessable, "unless he has other personal property to a greater amount."

An assessment scale was provided for the assessment of personal property, beginning at $100, but where the amount did not exceed $200, the smaller sum only. From $200 to $400; from $400 to $1,000; from $1,000 to $2,000; from $2,000 to $4,000; from $4,000 to $10,000; from $10,000 to $20,000; from $20,000 to $40,000; from $40,000 to $60,000: the sums henceforth increasing by $20,000 and which, in every case, the smaller sum became assessable.

Exemptions.

Briefly the exemptions were:—

All property vested in or held by Her Majesty, or in trust for Her Majesty, or for the public uses of the province. Every place of worship, church yard or burying ground. The real estate of every university, college, grammar school or other incorporated seminary of learning. Every public school, public hospital and the property belonging to a county, city, town, township or village. Every industrial farm, poor house, alms house, house of industry, lunatic asylum, and every house belonging to a company for the reformation of offenders. The property of every public library, mechanic's institute, and other public, literary or scientific institution.

The personal property and official income of the governor of the province, the full or half-pay of anyone in any of Her Majesty's naval or military services or any pension, salary or other gratuity derived by any person from Her Majesty's Imperial Treasury. All pensions under $200 a year payable out of the public monies of this province. The income of a farmer derived from his farm. The stock held by any person in any chartered bank or in any railroad company and all property, stocks or other securities which any party may own out of the province. So much of the personal property of any person as is equal to the just debts owed by him, except such debts as are secured by mortgage upon his real estate or may be unpaid on account of the purchase money therefor. The net personal property of any person, provided the same be under one hundred dollars in value. The stipend of a minister of religion, as long as the same does not exceed twelve hundred dollars and, finally, household effects, books and wearing apparel.

Real Property—How Assessable.

Real property shall be estimated at its full value as it would be appraised in payment of a just debt from a solvent debtor and the yearly value of such property in cities, towns and vilages shall be the real rack rent for each separate tenement, unless such rent is less than six per cent. on the full and real value thereof; in which case the property shall be assessed at the full yearly value calculated at six per cent. upon the real value.

For the year 1859, the annual value of the real and personal property and income amounted to $1,830,484, which, capitalized at 6 per cent., produced a total actual value of $30,508,067. The rate of taxation was fixed on this valuation

Royal Financial Corporation, Limited
Capital paid up, $566,220.32
703 ROGERS BLDG., VANCOUVER, B.C.
E. B. McDERMID, Managing Director

at 16 cents on the dollar, including school rates of 1½ mills on the dollar.

Divided the real property showed	$26,845,600
Personal property and income	3,662,467

Personal property and income thus contributing 12 per cent. of the taxes on the total assessment. The population as per census for 1861 was 45,288.

The assessment rolls were prepared and certified to in much the same manner as at present.

Every person assessable was required to give all necessary information to the assessor and, if required by the assessor, such person was to deliver to the assesor all the particulars respecting the property or income assessable against such person. For failure so to do, such person was liable to a fine of twenty dollars.

The right of appeal was given to the Court of Revision and to the county judge on the same grounds as is provided for in the present act.

The act further provided for the collection of taxes and the sale of land for unpaid taxes, the details of which it is not now necessary to go into.

We now come to "The Assessment Act, R.S.O. 1897."

Real property was defined as in 1859. The definition of personal property was extended and included all goods, chattels, interest on mortgages, dividends from bank stock and on shares or stocks of other incorporated companies, money, notes, accounts and debts at their actual value, income and all other property, except land and real estate and except property herein expressly exempted.

The exemptions were increased to some extent. For instance all horses, cattle, sheep and swine, which were owned by any owner or tenant carrying on the general business of farming or grazing and all farming implements and vehicles and all hay, grain and other farm products being the property of the said tenant or owner were exempted from taxation.

Vessel property, such as steamboats, sailing vessels, tow barges and tugs, was exempt, but the income from such property was liable to assessment.

Rental or other income derived from real estate, except interest on mortgages. These were the chief additions to the exemption clauses, all of which property and income were liable to assessment under the act of 1859.

The 1897 act provides that real and personal property shall be estimated at their actual cash value, as they would be appraised in payment of a just debt from a solvent debtor.

The mode of assessing personal property was set forth in Section 35 to 46 inclusive.

For 1859 the sections were from 32 to 43, several of them remaining word for word, as in the act of 1897. The assessment last made under this act is as follows:—

For 1905—

Real property	$131,481,345.
Personal property	17,337,726
Total	$148,819,071

Personal property thus contributing 11-65 100 % of the general taxes, as against 12 in 1852. The population was 226,045.

WILL HAVE AUDIT OF GAS COMPANY

At a well-attended meeting of representatives of municipalities affected by the proposed changes in gas rates as asked for by the Union Gas Company, it was decided on the 3rd inst. to go ahead with the audit of the books of the Union Gas Company and other companies which were amalgamated from time to time into the predecessor of the Union Gas Company, and secure such data as possible to present to the Ontario Railway and Municipal Board at the resumed hearing in opposition to the application for the increase in price. Some twenty municipalities are affected.

A resolution was adopted that the city of Chatham and county of Kent recommend the appointment of Messrs. Marwick, Mitchell, Peat and Company to audit the books, etc., of the Union Natural Gas Company, Limited, and of all other companies, the interests of which have been either partially or wholly acquired by the said company, and to prepare a report.

EMPLOYMENT MANAGERS TO BE TRAINED

United States Government Plans to Develop Employment Specialists

BY EDWARD D. JONES,

Professor of Commerce and Industries, University of Michigan

The government has found it necessary to enter the field of education on a large scale. War emergency courses in employment management, conducted by the employment management division of the War Industries Board, under the auspices of five governmental departments, have been arranged for in nine universities to date. The outline of the courses of study was made by Captain Boyd Fisher, who has general supervision of the work.

These courses in employment management are designed to train men or women, who already have a basic experience of at least three years in industrial life and factory methods, and who have come in actual contact with shop problems. Employers of labor, particularly those having war contracts, are urged to suggest men or women from their own organizations as candidates for these courses. With the increasing tightening of the labor situation, it is absolutely essential that large plants have an efficient central employment department. If the government is to take upon itself the task of furnishing labor when called upon, it is necessary that that labor be employed in the proper manner. In other words, each man should be hired to do the thing he is best fitted to do. In these days every man must count and there must be no square pegs in round holes. It has been thoroughly proved that an experienced employment manager, in charge of all hiring and firing, comes very near to solving the labor problem. Therefore it is up to the employer to place his house in order and make the best use of the men with which he is supplied.

The introduction of the employment manager into industry, and the standardization of the services of an employment department is acknowledged to be one of the greatest movements now taking place in the manufacturing industry of this country.

Courses have been arranged for at Harvard, in co-operation with the Massachusetts Institute of Technology, Boston University, in Boston; Columbia University, New York; University of Rochester, Rochester, N.Y.; Carnegie Institute of Technology, and the University of Pittsburgh, Pittsburgh, Pa.; University of Washington, Seattle; and the University of California at Berkeley.

There already have been 172 graduates from the classes conducted thus far. Most of these have returned to their own plants and placed in operation a department of employment. In each case where a central employment department is in vogue, there is never a thought of returning to the old-fashioned hit or miss methods of hiring men.

The courses of instruction in the various schools run from six weeks to two months, and the classes are conducted by the foremost authorities in the country on the various subjects covered.

The course of study deals chiefly with the problems of employment management. Brief consideration is given, however, to statistics, labor economics and business organization and management. The materials presented on the subject of employment management covers the organization and equipment of an employment department, the employing of the workers, the training of the workers, the payment of the workers, the control of working conditions, effects to keep the work up to standard, and the government of the shop. There are no charges for the course, except the outlay for living expenses of students and about $15 for books and supplies. It has been arranged to begin new classes as soon as each previous class is graduated, so application for admission to the courses in any of the above-named schools may be made at any time.

Employers of labor having candidates for admission to the classes and individual applicants, will be furnished with necessary information concerning qualifications for admission and other data regarding the courses, by addressing Captain Boyd Fisher, 717 Thirteenth Street, N.W., Washington, D.C.

ONTARIO FARM CONDITIONS

Potato and Other Root Crops a Failure—Preparations Being Made for Fall Wheat

The following is a summary of recent reports made by agricultural representatives to the Ontario Department of Agriculture:—

For lack of barn space some grain has had to be temporarily stacked in the fields. Threshing in the open also helped to conserve room for the crops. The results of threshing in most cases exceed the estimates made regarding the standing crops. Mixed grains in Norfolk have given as high as 65 bushels to the acre.

Corn promises to be a fair general crop after all, especially for the silo. With ordinary fall weather corn from the new southern seed used this year is likely to mature. Durham, however, reports that the crop there has a tendency to run to stalk rather than ear. Clover fields have been much improved by recent rains, which were much needed. Alsike and alfalfa are doing relatively better than clover for seed. Late potatoes have suffered from drouth, and will not be equal to those planted earlier. Apart from the number of small potatoes the general quality of the crop is good.

Roots were greatly checked during the hot, dry spell, but the soaking rains of the past week will help them along. Fall wheat land is being rapidly put into shape, and seeding has already started in some of the southwestern counties. The timely rains of the past week or two will put the ground in excellent condition for plowing and seeding.

Live Stock in Good Shape.

Cattle, which have been rather thin owing to poor grass, are getting back to form owing to improved pastures and the abundance of coarse grains and other fodder now available. Marketing generally has been slow, although Lambton states that "Thirty carloads of cattle were shipped to Buffalo last week and fourteen this week from points along the Michigan Central Railway." Frontenac reports that surplus stock such as old cows and bulls are coming on the market.

The milk flow is recovering, as meadows have picked up nicely with the rains.

Hogs are a little lower in value, prices running from $18.50 to $19 a hundredweight. Arrangements are being made for a fair supply of hogs being fed during the winter.

Fodder supplies for the winter are already well assured. Coarse grains never yielded better. Hay is light in yield, but much of the straw is of excellent quality for fodder. Corn for the silo promises to be a fair yield.

There is at present comparatively little demand for farm labor, as most of the extra work of fruit picking, etc., has been arranged for in advance.

ALBERTA LAKES TO BE REOPENED

Lesser Slave Lake and Lac la Biche, which for the last two weeks have been closed to commercial fisheries there operating by order of the Canada Food Board and the Department of Naval Service, will be reopened on September 1st. For improper handling of fish caught from the Lesser Slave Lake, Alberta, which resulted in waste, the Independent Fish Company, of Widewater, Alberta, had their license to operate suspended by the Food Board for two months, ending November 1st, during which time the company may not buy, sell, deal in or ship fish. The Great Waterways Fish Company, of Lac la Biche, for operating without a license and for lack of proper facilities for storing and handling fish, have been refused license to operate by the Food Board. The action closing these lakes was taken pending an investigation of complaints of waste. Investigation by officers of the Department of Naval Service and the Canadian Food Board has placed the blame for the waste complained of. Some two or three cars of fish had spoiled, but not over 50,000 pounds out of 1,000,000 pounds caught during the season to date. In the case of one of the offending firms the fish had spoiled in transit through careless packing. In the second case the firm had lacked storage facilities and the fish had spoiled awaiting shipment.

The Canada Food Board has succeeded in securing a second cargo of salt from the Mediterranean for the Nova Scotia fisheries.

CANADA TO HAVE THREAD INDUSTRY

Steps are being taken by the government, through the Canadian War Trade Board, to secure the establishment in Canada of an industry for the manufacture of linen threads and yarns. This is in accordance with the policy of encouraging flax growing here. Hitherto we have been almost entirely dependent upon Great Britain and United States for the manufactured article and it is aimed now to provide a wider market for the raw material.

UNITED STATES WAR TRADE BOARD

Some of the recent orders of the United States War Trade Board have been as follows:—

No. 180. A new list of commodities was announced, the exportation of which to European Holland and Denmark would be considered. In the case of the former country all business, except that with the government itself, must go through the hands of the Netherlands Overseas Trust Company, and with the latter country, it must go through the Merchants' Guild of Copenhagen or the Danish Chamber of Manufacturers.

No. 184. The board announced the adoption of a simplified procedure for securing export licenses.

No. 187. Announcement was made that applications would be considered for licenses to export canned beans.

No. 189. Announcement was made that the export of linseed oil and linseed oil meal would be considered.

No. 188. The board announced that arrangements had been made whereby licenses might be issued for export of certain commodities to a number of the British and French West African colonies.

No. 191. It was announced that applications would be considered for export of commodities to Sweden.

No. 193. The importation of Gutta-Goolatong would be permitted in limited quantities.

No. 194. Applications for the export of cotton seed oil would be considered.

No. 195. Regulations regarding personal baggage were revised.

No. 197. Importation of crude rubber was to be allowed to some extent during August and September.

No. 198. Italian marble might be imported under certain conditions.

No. 200. Commodities might be imported from Canada and Newfoundland under general license with the exception of those articles mentioned in the president's import proclamation of November 28 1917, and except calcium carbide, olive oil, tapioca, sago, peanuts, rabbit skins, toys, manufactures of cotton not produced in Canada, cocoa beans, feathers, pumice and wheat products. This special arrangement with Canada is the result of the adoption of the Canadian government of the same policy of import control as that which is pursued by the United States War Trade Board.

No. 201. Creosote oil might be imported from Japan to the amount of 2,000,000 gallons during the present calendar year.

No. 202. Shellac and a number of similar products were placed upon the restricted imports list.

No. 203. The restriction upon the importation of garlic from Italy was modified.

No. 204. Mackerel and herring might be imported to some extent from the United Kingdom.

No. 206. A new list of commodities which might be exported to European Holland and Denmark was issued.

No. 207. No shipments of sugar, wheat and wheat products to Canada might be made without individual license. Formerly collectors of customs were allowed to license the exportation of these commodities in small quantities in retail border traffic.

No. 212. The privilege of importing fish from Newfoundland and Canada was extended to include cured and preserved fish and shell fish, when these are products of the fishing industries of Newfoundland and Canada.

No. 213. Applications for licenses to export dried peaches and prunes to Canada would be considered on condition that other applications for an export license should have an import permit issued by the Canada Food Board.

DIVIDENDS AND NOTICES

PATON MANUFACTURING COMPANY OF SHERBROOKE

Notice is hereby given that a Dividend of (4%) Four per cent. and a bonus of (2%) Two per cent. for the half-year ending July 31st, have been declared payable on the 16th day of September next to Shareholders of record of the 31st instant.

Montreal, August 27th, 1918.

Central Canada Loan & Savings Co.

QUARTERLY DIVIDEND

Notice is hereby given that a Dividend of TWO AND ONE HALF PER CENT. (2½ p.c.) for the three months ending Sept. 30th, 1918, at the rate of TEN PER CENT. (10 p.c.) per annum, has been declared upon the Capital Stock of this Institution, and the same will be payable at the Offices of the Company, Toronto, on and after Tuesday, the first day of October, 1918. The Transfer Books will be closed from the 16th to the 30th of September, both days inclusive.

By order of the board,
E. R. WOOD,
President.

CONDENSED ADVERTISEMENTS

"Positions Wanted," 2c. per word; all other condensed advertisements, 4 c. per word. Minimum charge for any condensed advertisement, 50c. per insertion. All condensed advertisements must conform to usual style. Condensed advertisements, on account of the very low rates charged for them, are payable in advance; 50 per cent extra if charged.

SALESMAN.—Ten years' experience as contract agent with large Public Utility Company, open for engagement with well-established Company. Box 197, *The Monetary Times*, Toronto.

Fire Insurance Agency Wanted

A Real Estate and Insurance Company operating in Saskatchewan has an active agency covering 300 points throughout the Province. A General Agency for a strong reliable Insurance Company is wished to take up the business controlled from these points. This is a first-class opportunity for an Insurance Company writing fire business to make use of a large organization well established.

TORONTO BUDGET FOR 1918

Debt Maintenance Requires Smaller Proportion of Revenue —Assessment and Tax Rate Have Both Increased

The Toronto Bureau of Municipal Research, which is under the direction of Mr. Horace L. Brittain, has presented its City Budget Facts for 1918. This is an analysis of the finances of the city. In presenting the report the following statement is made:—

"The time to begin the making of definite plans for carrying on the city's business next year is near at hand. As citizens we must begin to think about our civic business for next year, just as we plan for our private enterprises. It is generally conceded that the making of the city's budget for any year should not begin later than October of the preceding year. In any event, taxpayers must begin not later than that time to plan for the proper expenditure of the city's income, which they supply. As a first step toward such planning one must learn if one does not know, what the plans were for this year's expenditure. The bureau, therefore, presents herewith an analysis of the official estimates for 1918.

"In preparing this analysis it has been necessary, to some extent, to make arbitrary divisions of some items; but, owing to the improvement in the form of estimate submitted by some departments to the city council and to the co-operation of other departments in supplying the information, such arbitrary distribution has been cut to a minimum, pending the adoption by the city of a uniform system of official estimates based on object of expenditure, character of expenditure, administrative units, and activities performed.

"It is not sufficient merely to have one's opinion of a year's expenditure or of the efficiency of the men who controlled it. In order to be effective, the citizens must see to it that there will be three (or two, as the case may be), candidates for alderman in his ward, four candidates for controller and one candidate for mayor, whom he should like to elect as custodians of his interests as a citizen during the coming year.

"The men who select the candidates are the men who determine the quality of the city government. When a voter gets to the polling booth and does not see on the ballot the name of a single candidate for whom he cares to vote, he finds that, in effect, he has thrown away his franchise. The most he can do is to make a selection from the selections of other people who have been wiser in their generation or at least more instant in business.

"The statements of the city's expenditures which have been issued this year are on a plane which, as to clearness, definiteness and comprehensiveness, has never been previously attained in this city and rarely in any city. Considerable improvement has also been made in the official estimates or budget, and further improvements will undoubtedly be made as the accounting system is recast and as the burden of the war is lifted. The best way to insure the continuance of the present tendency is to send to the city council and board of control men who will stand firmly behind progressive policies and the permanent officials who are giving them effect."

The Budget Analysed.

The following is a statement of the expenditures classified according to the principal functions:—

Main functions.	Gross expenditure.	Revenue other than taxation.	Net expenditure.
General government	$ 2,847,350	$1,335,082	$ 1,512,268
Protection of persons and property	2,777,608	151,516	2,626,092
Health and sanitation	2,045,185	17,389	2,027,796
Highways	2,458,369	40,000	2,418,369
Education	4,625,310	132,228	4,493,182
Recreation	628,089	4,286	623,803
Charities and correction	1,115,576	15,350	1,100,226
Public service enterprises and other municipal trading operations	2,720,758	2,846,903	*126,144
War purposes and special grants	4,059,480	. . . . .	4,059,480
Total	$24,177,730	$4,542,054	$19,635,076

---

*Profit on public service enterprises.

The proposed gross expenditures for the year amount to $24,177,730, and the anticipated revenue other than taxation is $4,543,054. This leaves a net expenditure of $19,635,076. From this must be deducted the surplus from last year of $1,527,404, so that $18,107,672 will have to be raised by taxation.

The bureau also analyses the budget on the basis of departments, and classifies the expenditures according to what is to be purchased (personal services, supplies, etc.).

VICTORY LOAN IN MANITOBA

The executive committee which will have charge of the Victory Loan in the province of Manitoba is made up as follows:—

Sir Augustus Nanton (chairman), A. L. Crossin (vice-chairman), T. R. Billett, G. M. Black, J. E. Botterell, Robert McKay, J. A. Thompson, A. N. Strang, D. L. Rossini, W. J. O'Neill, C. C. Ferguson, E. E. Hall, Peter Lowe (record secretary), W. R. Allan, Henry Ford (treasurer), and J. A. Anderson (secretary). J. N. Black is chairman of the publicity committee.

Preparations are being made for a thorough educational campaign through the newspapers, schools, churches, lodges, etc. The city of Winnipeg alone will be divided into 20 districts.

QUEBEC MINERAL INDUSTRY HAD GOOD YEAR

The mineral industry of Quebec had a prosperous year in 1917. According to the government's report just issued, the value of the output increased by about 22 per cent., the total being $16,266,480, compared with $13,287,024 in 1916. The principal mineral product of the province is asbestos, the value of which was $7,198,558, being an increase of over $2,000,000 for the year. Cement comes next in order with a value of $3,264,664, compared with $2,525,841 in 1916.

One of the most interesting features in connection with the report is the output of molybdenite. Before the outbreak of the war the production of this mineral, which is used as an alloy for the hardening of steel, in Canada was practically nil. Last year in Quebec it had a value of $238,096, compared with $129,267 in 1916. Although the annual output of gold in Quebec is very small, still it was able to increase during the year from $3,041 to $22,570. Silver was $78,880, compared with $38,113.

BIG INCREASE IN DOMINION REVENUE

An increase of over twelve and a half million dollars in the revenue of the Dominion for the first five months of the current fiscal year ending August 31 was shown by the financial statement for the month of August, issued on September 9th, by the department of finance. The increase is encouraging because of the fact that customs collections have fallen off by approximately seven million dollars.

A jump in miscellaneous receipts, including a number of the new war taxes, from $6,803,937 for the April-August period, 1917, to $16,877,670, for the same period this year makes up for the loss in customs revenue, and provides three millions of the twelve and a half millions increase. Despite the enforcement of the prohibition measures excise revenues have increased by over one million dollars and government railway receipts are higher.

The total revenue for the five months' period is $118,350,020, as compared with $105,785,600 for the same period last year.

War expenditures for the five months have totalled $63,580,275, as compared with $51,427,162 last year. For the month of August alone Canada spent $19,571,723 on the war.

The net debt now stands at $1,196,239,346, as compared with $864,143,590 on August 31, 1917.

For the month of August the passenger traffic of the Regina municipal railway increased approximately 22 per cent., compared with August, 1917. The revenue increased about 42 per cent.

PRODUCTION OF BREAD IN CANADA

Slight Decrease Shown in Average Cost for June —Details of Cost

The statement of the production of bread in Canada for June, compiled by the cost of living branch of the Department of Labor, is based on the reports received from 128 bakers. Some 33 of the bakers have not yet sent in returns for June, among whom are the following: Charles Robinson, St. John, N.B.; James N. Aird, Montreal, Que.; Slinn-Shouldis, Ottawa, Ont.; A. M. Ewing, Hamilton, Ont.; the Neal Baking Company, London, Ont.; the Neal Baking Company, St. Thomas, Ont.; Shelby Brothers, Vancouver, B.C.; the United Bakeries, Vancouver, B.C.

The spread of the report has been increased by some 64 additional bakers. This, and the number above of those reporting for May, but not for June, have doubtless modified the general averages.

Montreal is divided into two groups, six of the larger capacity and 11 of the smaller. It will be noted that the latter show a cost of half a cent per pound less than the former.

In Toronto a new group show about the same cost as those reporting for May

The average for the Dominion shows bread was produced at a cost of a little less than 6¾ cents per pound. These 128 bakers used 66,730 barrels of wheat flour and 1,564 barrels of substitutes, such as corn, oats and rye flours. The yield per barrel has been steadily kept up this month, showing an average of 264 pounds for the Dominion.

Details of Costs.

The following statement shows the cost of producing one pound of bread for the month of June:—

Locality.	No. of bakers reporting.	Cost of one pound of bread.
Halifax, Amherst, New Glasgow and Truro	6	6.664
Montreal (baking 1,000 barrels and over)	6	7.531
Montreal (baking under 1,000 barrels)	11	6.994
Quebec	2	6.064
Lachine and Lachute	2	6.950
Hull	2	6.255
Ottawa	6	6.475
Toronto	9	6.571
Toronto (now reporting)	4	6.567
Kingston, Belleville, Peterboro and Napanee	7	6.436
Sudbury, Goderich and Owen Sound	3	6.607
Cobalt, Haileybury and New Liskeard	6	6.345
Barrie and Huntsville	4	6.362
Hamilton and Dundas	10	6.491
Brantford	4	6.391
St. Catharines and Niagara Falls	7	6.411
London and Strathroy	6	6.043
Guelph, Stratford and Woodstock	6	6.303
St. Thomas, Chatham & Sandwich	6	6.271
Port Arthur	2	6.865
Winnipeg	5	6.641
Moose Jaw	2	7.473
Medicine Hat	2	6.347
Edmonton	4	7.269
Calgary	3	6.569
Victoria and Vancouver	3	7.099
Total	128	
Dominion average		6.734

The total produced in the month of June was 18,149,220 lbs. Total wheat and substitute flours manufactured in June amounted to 68,294 barrels. The Dominion average was 264 pounds.

The Lethbridge Board of Trade announces after careful compilation that the total grain shipments of the Lethbridge railway district during 1917 were just over 20,000,000 bushels.

NEW INCORPORATIONS

The Rosedale Coal Company, Limited, with Capital of $1,500,000, Received Charter

The largest company incorporated during the past week was the Rosedale Coal Company, Limited, with a capital stock of $1,500,000, and head office in Toronto.

The following is a partial list of charters granted during the past week in Canada. The head office of the company is situated in the town or city mentioned at the beginning of each paragraph. The amount noted is the authorized capital, and the persons named are the provisional directors:—

London, Ont.—Selak, Orth, Limited, $20,000; J. A. Selak, S. Orth, J. C. Stiles.

Lindsay, N.B.—Beal Grave Mines and Development Company, Limited, $98,000.

Hamilton, Ont.—Hamilton Mansions, Limited, $100,000; E. Wilson, H. E. Durbin, G. V. Knill.

St. Thomas, Ont.—Sutherland Press, Limited, $40,000; J. A. Sutherland, A. Rourke, J. E. Garland.

Quebec, Que.—Goulet and Belanger, Limitée, $20,000; E. E. Goulet, C. E. Goulet, L. A. Gaucher.

Wingham, Ont.—Farmers Fertilizer Company, Limited, $50,000; T. Taylor, A. O. Parker, J. E. Stoakley.

Halifax, N.S.—Reid East Coast Salvage Company, Limited, $1,000,000; F. H. Markey, G. G. Hyde, J. G. Ahern.

Windsor, Ont.—Denby Motor Truck Company of Canada, Limited, $200,000; T. G. Murton, H. M. Hackett, J. Gray.

Vancouver, B.C.—Gosse-Millerd Packing Company, Limited, $24,000. Brown and Mahoney, Limited, $25,000. Dominion Carton and Printing Works, Limited, $35,000. Henriette Ship Company, Limited, $100,000; J. H. Lawson, S. J. Richard, J. C. Ralston.

Toronto, Ont.—Rosedale Coal Company, Limited, $1,500,000; R. G. O. Thompson, R. S. Guasby, H. L. Mowat. Atic Lake Mines, Limited, $40,000; E. B. Graham, F. Lane, H. A. Clark. Boys' Wear, Limited, $40,000; J. W. Bicknell, W. B. Stirrup, J. S. Duggan. Provincial Lumber Company, Limited, $40,000; W. J. Forrester, G. C. Campbell, A. D. McKenzie. Raw Silk Corporation of Canada, Limited, $100,000; T. R. Ferguson, H. Ferguson, C. H. Kemp.

Montreal, Que.—Adanac Color Company, Limited, $20,000; L. J. Beique, P. R. Bisaillon, H. R. Bisaillon. M. Ryan and Company, Limited, $20,000; M. I. Popliger, W. Astrof, S. Hopmeyer. Maison du Bon Gout, Limited, $20,000; H. Shapiro, M. Rosen. Le Placement National, Limitée, $49,500; A. W. Brodeur, A. Brodeur, C. Brodeur. Airo Rubber, Limited, $100.000; J. Latreille. E. Sansregret, J. E. Sansregret. Cie Chatelet, Limitée, $50,000; J. P. Walsh, C. McLaughlin, G. L. Lee. Canadian Duplexalite Company, Limited, $150,000; R. T. Heneker, H. N. Chauvin, J. E. Coulin. James M. Aird. Limited, $750,000; J. M. Aird, J. J. Aird, W. R. Aird.

COBALT ORE SHIPMENTS

The following is a statement of the shipments of ore in pounds from Cobalt Station for the week ended September 6th, 1918:—

Edwards and Wright, 65,974; Buffalo, 87,075; Dominion Reduction, 62.009; Kerr Lake, 60,292; total, 276,141.

The total shipments since January 1st, now amount to 20,017,114 pounds, or 10,008.5 tons.

Crops around Lethbridge and in Southern Alberta generally, are reported to be good and the yield will average 25 bushels to the acre. Recently some members of the Lethbridge Board of Trade travelled through the district and were highly pleased with the outlook. In addition to the grain crops there will also be a good yield of vegetables, particularly around Raymond. In some places there are several hundred acres of potatoes alone.

CANADIAN CROP SUMMARY

Conditions Reported from All Parts of the Dominion—General Average is Good

A summary of telegraphic reports on the condition of field crops in Canada at the end of August has been issued by the Dominion Bureau of Statistics as follows:—

Atlantic Provinces.

Prince Edward Island (Charlottetown): Hay crop will be up to average. Small fruits, medium; crop early. Harvesting started with indications of heavy crop. Slow growth in corn. Potatoes promise an excellent crop. Nova Scotia (Nappan): Roots and grain made excellent growth. Potatoes and beans fair. Blight in potatoes prevalent. Hay slightly below average, but cured in good condition. Turnip feed ripening nicely. (Kentville): Grains, which are an excellent crop, have ripened well, and considerable has been harvested. Roots are looking well. Potatoes have shown considerable early blight. Apples a medium crop. New Brunswick (Fredericton): Conditions good for an average hay crop and for ripening grain. A record yield of wheat and oats now assured. Corn is generally a failure. Early potatoes of good quality, but yield is disappointing. Turnips good where not attacked by aphis.

Quebec.

Roberval (Chicoutimi and Saguenay): Hay harvest has been comparatively good. Frost in certain places has injured tobacco and potatoes. Cereals are ripening well and promise a good yield, especially wheat. Ste. Anne de la Pocatiere (Kamouraska): Weather conditions favorable for ripening of cereals, the first sown of which are very good. Late-sown cereals will probably not ripen. Potatoes injured by late blight, and drought of late date lessens the prospects of a general heavy yield. European plums a failure; apples half a crop. Hay good. Cap Rouge: All grain very good except barley, which is good. Early potatoes are extra; late potatoes are commencing to suffer from blight. Apples are poor, and there are practically no plums. Roots for stock are good, but corn for silage is the worst crop in years. Lennoxville: Hay an average crop. The grain harvest is one of the best for some time. Roots are promising; silage corn poor. Makamik (Pontiac): Haying done; quality fair. Yield of early-sown grain probably 15 per cent. above average; late-sown very poor. Vegetables average, though potatoes badly frosted in places.

Ontario.

The Ontario Department of Agriculture reports that fall wheat is a 50 per cent. crop of good quality. Barley, oats and spring wheat are well harvested; the yields and quality of grain are excellent and the straw is clean. Peas good; beans fair; silo corn promising; early potatoes fair; late ones poor. Roots are now recovering from drought; pastures are reviving. The labor situation during harvest was nicely met. Ottawa (Central Experimental Farm): The harvesting of grain is about completed and the thrashing yields are extra good, being decidedly above average. The corn crop is not quite up to the average; it is very good in some sections, particularly near Ottawa, but in other districts it is not so good, owing to the unfavorable weather of June and poor seed. Roots are a fair crop, recent rains having benefited turnips and mangolds very materially.

Manitoba.

Morden (Experimental Farm): Probably 50 per cent. of the grain crops are already cut and nearly as much in stook. The heads are especially well filled and the kernels plump. The wheat crop will be above average in this section, with oats and barley bumper crops. No hail or frost injury, but rust prevalent. Rust and wet weather have combined to make harvest difficult. No thrashing has been done. Potatoes promise to be a record-breaker; certainly 400 bushels to the acre on this farm. Many vegetables slow to ripen on account of cool weather and great rainfall.

Saskatchewan.

The Saskatchewan Department of Agriculture reports that the recent rains have changed conditions in the southern and central parts of the province for the better, and the crop yield will be higher than anticipated. The south-western and west central districts report that, while the rains came too late to increase the crop yields to any great extent, yet the later-sown grains will be greatly benefited and will result in much more feed than was thought would be available. In the north-western, north-eastern and the northern parts of the east central districts frost has inflicted serious damage, varying from 5 to 75 per cent. Indian Head: All grain has filled exceptionally well; no damage from frost, hail or rust reported from this district. Seventy per cent. of wheat cut. Conditions have improved greatly and yield will be heavier than first expected, while sample will be exceptionally good. Scott: Fine weather prevailing; some rain late in month. Wheat harvest well advanced, but extremely light; early oat crop poor. Some late crops will require three to four weeks free from frost. Barley improved; potato crop generally very late.

Alberta.

The Alberta Department of Agriculture telegraphs that the harvest is in full swing throughout the province and a fair crop is being reaped. Outlook in Peace River country very optimistic. Weather somewhat irregular, considerable rain having fallen in many parts. Outlook for the live stock problem promising. Lacombe: Rains have greatly benefited green feed and pastures and relieved the feed situation materially. Later grain for thrashing also filled better than expected at time. Lethbridge: The wheat harvest in southern Alberta well advanced. In many localities, in drier districts, it is already completed and thrashing in isolated cases started. This part of the province will produce enough wheat for seed next season and have some to spare, but the oat and barley crop is almost nil.

British Columbia.

Agassiz: Unsatisfactory harvesting weather during August. Precipitation, 7.94, which is 5.3 inches more than average for twenty-seven years. Grain badly discolored; a quantity which germinated in sheaf straw only fit for bedding. Roots promise good crop. Potatoes blighted. Second crop of clover much improved. Invermere: Crops generally under irrigation are very good; dry farming results poor. Heavy crop of second-cut clover and alfalfa has been cut. Wheat, barley, corn and roots very good; oats fair. Summerland: Apricots, peaches, plums and pears exceeded expectations. Winter apples, owing to increased size, may reach 75 per cent. of last year. Much hay was harvested in poor condition on account of rain, but rain has helped dry farmers. Some farmers who expected nothing will be able to cut grain for hay. Sidney, V.I.: All crops harvested in good condition. Twenty-five per cent. thrashing done. Very dry. Ploughing difficult. Pastures short; supplementary feeding necessary for dairy cattle. Live stock being slightly reduced. Feed of all kinds high in price.

Within the last few weeks many fines and closing-up orders have been inflicted as penalties for violation of the Canada Food Board's regulations in various parts of Canada. Some of the convictions have been obtained by the Canada Food Board's own inspectors, and many more by municipal police authorities. It is the duty of local officials to see that these important regulations are enforced, as they have the full authority of law.

Candy manufacturers in Canada have used in the past 11 per cent of all the sugar consumed in Canada. This has been reduced to a maximum of 5½ per cent. by the Canada Food Board owing to the sugar situation.

"It is the plain duty of everyone who can render any assistance in our harvesting operations to give that assistance, and to give it willingly and cheerfully," says Hon. T. A. Crerer, minister of agriculture.

WINNIPEG WAR LOAN QUARTERS

Winnipeg, September 9, 1918.

The Royal Bank, through its supervisor of western branches, Robert Campbell has placed at the disposal of the local Victory Loan committee, the fine offices until recently occupied by the Northern Crown Bank, situated on the corner of Fort Street and Portage Avenue. The Victory Loan committee will use through the campaign the main floor and the second floor which have been vacant since the absorption of the Northern Crown by the Royal Bank.

The general committee on the Victory Loan has unanimously approved of the proposal of the temporary press committee that a conference of all the editors and publishers of the province should be held in this city on Tuesday, September 24. The list of journals which will be represented at this conference, includes 64 weekly country papers, 22 weekly papers printed in foreign languages, four agricultural papers, 17 class papers, printed in this city, and the daily papers of Winnipeg, Portage la Prairie and Brandon. The editors of these papers will, at the meeting on September 24, elect the permanent press committee which will have charge of the publicity work during the campaign.

The programme for the conference includes a meeting at which several addresses will be delivered with reference to the war and the loan. At the conclusion of these addresses there will be a general discussion. Editors will be asked to submit for consideration any difficulties in the way of the success of the loan which they find in existence in their districts. At 6 o'clock a banquet will be served and at its conclusion there will be several special addresses. Sir Augustus Nanton will, without doubt, speak on the loan, and there will be other popular speeches.

The crop of raw sugar in Cuba turned out to be 300,000 tons short of the estimates upon which the original allotments of sugar to the allied countries, including Canada and the United States, were calculated. Fifty thousand tons were sunk by submarines off the United States coast. The Louisiana cane crop and the United States beet sugar crop were alike disappointing The sugar beet section of northern France was overrun by the Germans and the sugar beet section of northern Italy was overrun by the Austrians in their spring offensives. Consequently, the world is short of sugar.

Monthly Income Policies a Necessity

A legacy of life insurance amounting to $100,000 was completely dissipated in seven years by faulty investments and expensive living. In another case a beneficiary squandered the proceeds of a life insurance policy amounting to $50,000 in a single year. To protect the beneficiary against inexperience in making investments, and against extravagance, the monthly income policy has been introduced, providing an automatic, safe and profitable investment of life insurance funds. Supplement your existing insurance with a monthly income policy. It can be written on the life, limited life or endowment plan. Such a policy with our disability clause incorporated is without an equal in furnishing ideal household protection. We will gladly furnish full particulars and illustrations.

CROP ESTIMATE FOR 1918

Will Be About Seventy Per Cent. of Last Year—No Province Has Total Failure

The Manitoba Free Press presented on the 4th inst. the 15th annual estimate of the crop of the three western provinces, compiled by the commercial and agricultural editor, together with the eighth consecutive report on the crop of the present season, the first report having been issued on Easter Saturday.

The estimate is based on observations made in almost five weeks of continuous travel by train and motor, as well as on the reports sent in by local correspondents, and is felt to be conservative. The figures for the three provinces are:—

	Bushels.
Wheat	149,844,000
Oats	183,045,000
Barley	41,957,000
Rye	724,000
Flax	5,056,300

Divided as to provinces the returns show:—

Manitoba.

	Bushels.
Wheat, 2,616,000 acres seeded, average yield 18—total	47,124,000
Oats, 1,500,000 acres seeded, average yield 40—total	60,000,000
Barley, 715,000 acres seeded, average yield 35—total	25,025,000
Rye, 50,000 acres seeded, average yield 15—total	750,000
Flax, 16,300 acres seeded, average yield 7—total	114,000

The average of 18 bushels is regarded for wheat as safely conservative in view of the enormous areas in the north that have up to the present writing escaped all damage from frost and where the average of yield is likely to be 30 bushels. The yield would have been still higher had it not been for some damage occasioned by black rust in the south and southwest. The plague came late and has done comparatively little damage, but it has done some. The statements from correspondents in the detailed report are the best information on this point. Manitoba has a wonderful barley crop and the estimate of 35 bushels is probably too low and certainly the government figures of acreage are too small. The difference is due to large areas of barley that were seeded on land that had been partially prepared for summer-fallow after the original estimate of acreage had been made. The acreage of flax is also absurdly small. There were over 6,000 acres seeded to fibre flax alone, to say nothing of the ordinary milling flax, but as they are government figures they have been used as the nearest guide obtainable.

A rough estimate of the value of the crop is:—

Wheat at $2.05	$ 96,604,200
Oats (will be mainly for seed) $1	60,000,000
Barley at $1	25,025,000
Rye at $1.68	1,260,000
Flax at $4	456,400
Or a total for the five cereal crops of	$183,345,600

This takes no account of the 10,000,000 bushels of potatoes, the wonderful hay crops, the roots, the sales of livestock and the tremendous returns from dairying, that will equal another hundred million at least. It looks as if Manitoba would be able to indulge liberally in Victory Bonds next month. There have been many disappointments. The crop has been expensive to produce, the harvest weather has been the coolest and wettest since 1899, but in spite of all these drawbacks Manitoba has a good paying crop and fully 85 per cent of it is to-day beyond damage from frost, though not from continued wet weather.

Saskatchewan.

Saskatchewan has been hard hit in many districts, first by drought and last by frost in July, but in view of the present prices, Saskatchewan has, as a whole, a paying crop:—

	Bushels.
Wheat seeded, 9,222,000 acres, average of yield 10—total	92,220,000
Oats seeded, 4,602,000 acres, average of yield 25—total	115,050,000
Barley seeded, 663,500 acres, average of yield 22—total	14,597,000
Rye seeded, 70,000 acres, average of yield 12—total	840,000
Flax seeded, 753,700 acres, average of yield 6—total	4,522,200

The value of this crop based on present prices is roughly:—

Wheat at $2	$184,440,000
Oats at 80 cents	92,040,000
Barley at $1	14,597,000
Rye at $1.68	1,411,200
Flax at $4	18,088,800
Or a total for cereals	$310,577,000

In common with Manitoba, Saskatchewan has heavy returns from livestock and dairying, though not from hay.

Alberta.

The freak season has hit sunny Alberta harder than either of her sisters. Extreme drought in the south and heavy July frost in the north have taken desperate toll of the crops, but even here there is not a total failure.

Wonderful recovery has been made in some of the districts of the south, since the rains came and the returns from the irrigation belts will be very large, and to some extent offset the lack on the dry lands.

The frosted districts in the north have made considerable recovery and it now seems pretty well assured that Alberta will have: Wheat, 10,500,000 bushels; oats, 7,995,000; barley, 2,335,000; rye, 134,000; and flax, 420,000, or a cash value at present prices of $33,235,120.

Very inadequate returns for the areas seeded and the outlay for the same, but a very long way better than nothing.

The Free Press does not claim for these estimates that they are likely to be as accurate as usual, the season has been so extraordinary and the crop is so spotted that the threshing machine and the inspector's office will be the only absolute source of knowledge, but the feeling is strong that the estimate, if anything, errs on the side of caution.

The past few days and nights have been very cold and there is much late crop, but the degrees of frost reported from many districts where crop is late, are not sufficient to materially lessen the yield, though undoubtedly some toll will be taken off the grade. The province in most danger is Saskatchewan and the crop that will be likely to suffer as to yield will be the late oats, of which there are many fields.

Correspondents were especially asked to state the possibility of damage from frosts occurring before September 10th, that being felt to be the date by which even the latest crops should be ripe.

The chief matter of regret in the present crop is the small amount that will be available for overseas. At least 25,000,000 bushels must be retained for seed, but if Canadians were patriotic enough to deny themselves and reduce their bread ration to 4 bushels per capita, as might easily be done, there would be over 90,000,000 for export.

The Northern Trusts Company of Winnipeg have moved to new premises at 333 Main Street, adjoining the Bank of Montreal. The building will also be occupied by the Canadian Fire Insurance Company and the Northern Mortgage Company of Canada. After purchasing it some time ago the Northern Trusts Company had it entirely altered, making excellent office quarters. They were formerly in the Great-West Life Building.

Received business of the North American Life Assurance Company for August, 1918, amounted to $1,240,620, being the largest amount received during any August since the inception of the company. A special effort is being made by the agency force to canvass old policyholders during September. The three leading personal producers of the North American Life for August were Miss M. L. Blake, Michigan; J. A. L. Robinson, Regina; and A. C. Lawrence, of Nelson, British Columbia.

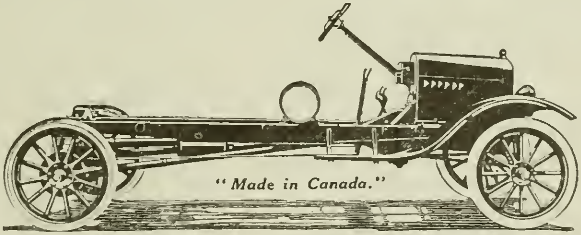
Deliveries by Ford One-Ton Truck

Ford
ONE-TON TRUCK



"Made in Canada."

PRICE
$750
F. O. B.
FORD, ONT.

THE COMMERCIAL CAR is looked upon today as a necessity by progressive business firms who have hauling and delivering problems to consider

Wholesale or retail merchants who must deliver quantities of merchandise have found the horse-drawn delivery to be too slow, expensive and entirely inadequate.

The Ford truck, with a single driver, will do more work and cover more ground than two teams and two drivers, for it travels in half the time. This truck will reduce your hauling costs. It eliminates one driver's salary and the care which horses always require It will make your delivery service more efficient. It will widen your area of distribution. It will be constantly ready for work—day or night. It will show a profit on your investment.

There has been a popular demand for a Ford truck, as is shown by the many uses, for commercial purposes, to which our standard chassis has been put. Now, after most careful designing and exacting tests, we are able to offer the Ford One-Ton truck to meet this demand.

The Ford truck is supplied as a chassis only. This permits the purchaser to mount any one of the many body styles specially designed for the Ford truck, and already on the market, and he can select it to meet the individual needs of his business.

See any Ford Dealer in Canada, or write for a catalog

Ford Motor Company of Canada, Limited, Ford, Ontario

WHEAT CROP IS BEING HARVESTED

Progress is Good, But Labor Shortage Has Proved a Serious Handicap

The Canadian Northern Railway crop report for the last week in August shows cutting general over practically all Manitoba, Saskatchewan and Alberta, thrashing begun in the southern areas, and indicates that marketing of new wheat will begin within the next few days.

A majority of agents report the wheat berry plump and of excellent quality, and it may well be when the figures of yield are compiled there will be a surprisingly large total from the prairie provinces. There are isolated reports of slight damage from rust. Feed conditions are reported greatly improved in the south owing to recent rains. Oats in the north and barley generally appear to be excellent yields.

Average yields for districts tributary and not previously given are (wheat when not otherwise stated). Giroux, Man., 22-25 bushels to the acre; Elie, Man., wheat 18, oats 40, barley 30; Rossendale, Man., wheat 20, barley 35, oats 50-60; Rapid City, Man., 15; Clan William, wheat 20, oats 45, barley 35; Erickson, Man., wheat 25, oats 45, barley 35; Sandy Lake, Man., wheat 20, oats 40, barley 30; Montmartre, Sask., wheat 12, oats 25; Kendal, Sask., 15-20; Odessa, Sask., wheat 12, oats 25; Brooking, Sask., 15; Avonlea, Sask., 15; Mossbank, Sask., 12-20; Ethelbert, Man., 25-30; Girvin, Sask., 15; Kenaston, Sask., 15; Rosetown, Sask., 25; D'Arcy, Sask., 15; Carmel, Sask., 12-15; Kindersley, Sask., 10; Marengo, Sask., 3-12; Merid, Sask., 10; Alsask, Sask., 5-40; Morrin, Alberta, 20; Roundhill, Alberta, 10, oats 45-50; Haynes, Alberta, oats 25; Kelso, Sask., 12.

A need of additional harvest labor is shown from Gladstone, Man.; Hal'boro, Man.; Rhein, Sask.; Hamton, Sask.; Carlyle, Sask.; Goodwater, Sask.; Colgate, Sask.; Ceylon, Sask.; Durmer, Sask.; Ettington, Sask., and in the districts surrounding Portage la Prairie some 250 men from that city are stooking grain in the fields.

Saskatoon District Short of Labor.

A correspondent of *The Monetary Times*, writing from Saskatoon, says:—

The crops in the immediate vicinity of Saskatoon are good, those north and north-east are very good. Harvesting is in full swing, but the shortage of labor appears to be serious. About 50 per cent. of the cutting is done, while the stooking is far behind this.

In conversation with different farmers, I find that the help is mostly alien, and incompetent. It is doubtful if much relief can be expected from the east, owing to conscription taking the surplus men from there. The writer was recently talking to a farmer who had 400 acres of crop ready to cut. Two sons—the only help he had—were conscripted, and he told the writer that he could not hire a man to drive the binder. He had to drive the binder himself and pay two Doukhobors $5 a day each to stook. You will see from these conditions that the harvesting and thrashing may be very late this year.

PRINCE RUPERT GETS CONTRACT FOR SHIPS

Contracts for the construction of five steel ships for the Norwegian government have been let and they will be constructed in Prince Rupert, B.C. Mr. John Little, of Pittsburg, head of the construction company, is expected in Prince Rupert this fall. Besides the construction of steel freighters much repair work will also be undertaken. It is expected that word will be received soon to commence grading at the site of the shipyards to be erected at Hays Creek.

At the annual meeting of the Winnipeg Grain Exchange on the 11th inst., the following officers were elected for the ensuing year: President, Fred J. Anderson; vice-president, J. F. Beverell; secretary-treasurer, Dr. Robert Magill. Members of council, W. R. Bawlf, T. Brodie, R. R. Dobell, Geo. Fisher, J. C. Gage, D. Horn, J. Stewart, Capel Tilt and W. A. Matheson.

INTERCOLONIAL RATES TOO LOW

So Sir Henry Drayton, Chairman of the Board of Railway Commissioners, Says in Ordering Increase

Were freight rates on the Intercolonial Railway equivalent to the average rate on all the Canadian railways, the revenue of the government-operated road, on the basis of the traffic of 1917, would have been $2,154,600, or 19 per cent. more than it was. That is the significant conclusion drawn by Sir Henry Drayton, chairman of the Railway Commission, in a judgment recently handed out by the Railway Board ordering an increase in the commodity rates on sugar, affecting principally the Maritime province refineries. In the course of the judgment Sir Henry goes at some length into the Intercolonial rates generally, comparing them with the rates charged on the other railway systems of Canada. "It is perfectly apparent," he concludes, "that the Intercolonial returns are abnormally low. Under the circumstances there is no question but that any rate reductions on the Intercolonial are really not made at the expense of that system, but are made at the expense of the Canadian taxpayers generally."

In view of the prospective nationalization of the Grand Trunk and Canadian Northern and their incorporation with the Intercolonial into one great government-operated transcontinental system, it would seem that unless the taxpayers of one part of the country are to continue paying taxes to meet the deficits on the low rates accorded the people of the Maritime Provinces, there will have to be a general revision upward on the Intercolonial system.

How Intercolonial Compares With Others.

Sir Henry finds from the railway statistics of 1917 that the ton miles on the Intercolonial amounted to 1,900,097,294 at an average rate per ton mile of 0.576, with a resultant total earning of $10,946,071. Had the Intercolonial carried freight at the average Canadian Northern Railway rate of 0.688, the earnings would have been $13,072,669. At the average Canadian Pacific Railway rate of 0.676 per ton mile, the earnings would have been $12,844,657. At the average Grand Trunk Railway rate of 0.738 per ton mile, the earnings would have been $14,022,718.

On the basis of its operating ratios in comparison with those of other lines, Sir Henry finds that the Intercolonial again suffers by comparison. The Intercolonial's operating ratio to revenue is 90.9, the Canadian Northern's is 71.7, the Canadian Pacific 65.7 and the Grand Trunk 71.9. The net freight operating receipts per mile of line are $637. At the Canadian Northern ratio they would be $2,051, at the Canadian Pacific $2,402, and at the Grand Trunk $2,037.

The chairman of the Railway Commission declares that with interest on only a 4 per cent. basis, at least 2 per cent. on the actual investment ought to be set aside by railways for renewal.

"Eliminating all question of interest charges and payment of past deficits," he says, "the necessity of such a reserve is easily shown by taking the cost per mile of the Intercolonial to the country. In 1899 the cost per mile was $37,957, in 1911 the cost per mile amounted to $57,419, and the cost per mile to-day on the mileage actually owned is over $79,000, the cost of the road to March 31st, 1917, being returned as $120,275,032.

"A percentage of this increase can undoubtedly be justified, but it is equally certain that a very large percentage of it cannot be justified on any basis of normal values and business accounting."

RAILROAD EARNINGS

The following are the earnings of Canada's transcontinental railways for the first week in September:—

Canadian Pacific Railway.

	1917.	1918.	Inc. or dec.
Sept. 7	$2,666,000	$3,053,000	+ $387,000

Grand Trunk Railway.

Sept. 7	$ 992,613	$1,346,536	+ $353,923

Canadian Northern Railway.

Sept. 7	$ 715,800	$ 901,000	+ $185,200

By A. M. BEALE
Assistant Engineer, Water Power Branch, Department of Interior, Ottawa.

THE return of peace will find most of the nations of the world burdened with debt. Vast areas devastated by war will have to be completely rehabilitated and for a considerable period at least will be non-productive. Belligerent countries will have to make renewals and replacements in many directions whence material has been diverted for war requirements. Finally, the war has brought about the consumption of natural resources on such a vast scale that it will be essential to see to it that in future our resources are used to the best advantage.

It is obvious, therefore, that if the world is to make a speedy recovery, there must be a quick industrial revival and the country most prompt to produce in excess of its needs will be able to dispose of its surplus in foreign markets to the best advantage, and being first in the field will be in a position to build up an export trade whereby its national credit will be maintained, its national obligations met and imports requisite for its needs, comfort and general well-being secured. Canada should be in a position to be early in the field, but must look to her industrial efficiency, if she is to progress in face of the keen competition which will develop amongst the nations striving to regain their sadly impaired prosperity.

"Motive power," in the words of Sir Dugald Clerk, the eminent British engineer, "is of fundamental importance to industrial civilization." It has been pointed out that the development of power resources has gone hand in hand with civilization, lack of mechanical sources of energy to replace manual labor or the neglect of such sources has always retarded progress, as, for example, in China, whereas the discovery or development of power has led to prompt industrial progress. The early location of the iron and woolen industries in Yorkshire is attributed to the existence there of water power, while Great Britain's commercial supremacy is in a great measure due to the discovery and exploitation of her coal, which placed large quantities of power at her disposal.

The world war, bringing with it a tremendous speeding up of industry in the manufacture and transportation of munitions has taxed the power resources of every nation, the immediate cause of fuel and consequent power shortage has varied, but the result has been the same, namely, an almost feverish energy to attain greater efficiency in the use of existing power resources and in the search for and investigation of new ones. Every country, of which we have news, is studying its power resources not so much from the standpoint of present needs but rather for those of the future.

In Great Britain, proposals have been set forth for vast central station fuel-power plants at strategic points for the supply of power for all industries, so as to secure a more efficient use of coal, the extraction of all by-products is being urged not merely on account of their value, which is enormous, but also because a cheap fuel will thereby become available to reduce the cost of power. A recent report by the committee on electrical trades appointed by the British Board of Trade states: "The prosperity of industries depends largely on cheap energy for driving machinery, and even a fractional reduction in price is of importance in determining the ability of manufacturers to compete in the world's markets." Stock, too, is being taken of the water powers of the British Isles.

A conjoint board of scientific societies acting under the auspices of the Imperial Government and recruited from the highest ranks of technical men in Great Britain is studying the resources of the Empire. "Recognizing the importance of water power, a strong sub-committee was appointed to take stock of this resource and, thanks to the co-operation of the dominions, a large amount of valuable data has been secured and steps taken towards a fuller knowledge and appreciation of the water power resources of the Empire. Whilst Canada leads, New Guinea, New Zealand, Tasmania may be instanced amongst others of the British dominions as having great and vastly important water power possibilities.

It may not be amiss to draw attention here to the Tata hydro-electric undertaking in India which, to those unfamiliar with tropical conditions, is truly remarkable. It is a scheme to provide approximately 100,000 horse-power for 3,600 hours per year from valleys which have hitherto been dry for nine months of the year. This undertaking depends for its water supply on the storage of the monsoon rains which, it is stated, averaged, over a period of 34 years, 3¼ inches per day, for 45 days.

This scheme, as yet incomplete, is nevertheless in operation. It was financed in India and during the first year of operation earned and paid a dividend on its full capital.

Amongst our allies, the United States, faced with similar fuel conditions to ourselves, is taking active steps to mobilize her power resources but is handicapped, as are some parts of Canada, by unsatisfactory water power laws.

Water power is a salient feature in the contrast between the United States-Canadian boundary and the frontiers of Europe. To a traveller journeying along the frontiers of continental Europe in times of peace, the most conspicuous handiwork of man would probably be the mighty fortresses designed for defence against warlike aggression. These must always serve to remind the frontier dwellers that they live in the shadow of a continual war-menace. Here, on the contrary, the handiwork of man has been devoted to the erection of undefended bridges and canals along boundary waters, and of hydro-electric stations, which attract dwellers to the border regions that they may mutually enjoy a natural industrial asset, and must remind them that they live in the light of what promises to be a perpetual peace.

European Construction.

France, until the war an importer of one-third of her coal, was faced by the loss to the enemy of a considerable proportion of her own mines and the rising price and difficulty of transportation for imported fuel. Promptly, and in spite of many difficulties, she has proceeded with hydro developments and by the end of this year will have 1,100,000 horse-power developed, an increase of 450,000 horse-power since 1910, two-thirds of which has been secured since war broke out.

Italy, lacking coal, is an excellent field for water power development and through the famous A.E.G.[*] the Germans secured a stranglehold on Italian industry and by 1910 515,000 horse-power was developed. Since the outbreak of war, the Italian government has not merely broken the Teutonic hold but has proceeded with an active water power policy. A recent news item states that concessions for 208,000 horse-power were granted in 1917 and that in December, 1917, there were 218 requests for concessions, estimated at 816,000 horse-power, in course of examination.

In Russia, the provisional government has recently appointed a water power committee with absolute control over the development of all water power schemes in the Empire exceeding 300 horse-power.

Neutral countries are well aware that they will have to compete in a much keener market after the war and we see signs of stimulated activities in the Scandinavian countries.

A recent despatch from Mr. Albert Halstead, the United States Consul-General at Stockholm, states that the present capacity of water plants in Sweden is about four million turbine horse-power, of which one million was completed during 1917. This is such an enormous advance from the figure of 850,000 turbine horse-power, reported by Sven Lubeck in 1915, that one is inclined to doubt the accuracy of Mr. Halstead's figures, particularly since former estimates only credit Sweden with four and one-half million horse-power available.

Mr. Halstead states that 92 per cent. of the power is being used for the larger industries and 8 per cent. for illumination and the lesser industries.

Information collected during 1915 by the Dominion Water Power Branch indicated that Norway had five and one-half million water horse-power available, of which 1,120,000 turbine horse-power was developed, 400,000 horse-power being utilized for nitrogen fixation. It would be interesting to learn if progress in Norway has been on the same scale as that reported for Sweden. The governments of both countries are rendering every possible encouragement in the development and use of "white coal."

Denmark has practically no water power and it is interesting to note, as indicating the national importance of power, that a suggestion has been put forward for a triangular agreement whereby Norway and Sweden should export hydro-electric power to Denmark, Norway to make up any power deficiencies caused thereby in Southern Sweden where the water powers are less extensive than in the north.

Barcelona, the "Manchester of Spain," a city of 300,000, is replacing steam power by hydro-electricity and a Canadian company has already completed a large portion of an extensive system of reservoirs and hydro-electric stations on the Noguera Pallaresa and Segre rivers. A recent number of the Journal of the Royal Society of Arts reports the formation of a powerful company to exploit the Douro Falls on the Portugal-Spain frontier where 350,000 horse-power is said to be available.

Switzerland has been called the "Industrial Annex" of Germany, and in 1910 25 per cent. of her two million available water horse-power had already been developed. More recent information is not available; nevertheless, the mere fact that 32 horse-power had been developed in 1910 for each square mile of area is sufficient indication of the economic importance of Swiss water powers.

Central Powers are Well Developed.

Concerning enemy countries, information filters through from time to time and in July last the British Board of Trade Journal contained a special article on the proposals for the centralization and development of electric power supply in Germany as part of the reconstruction policy after the war. In Wurtemburg, the State is to participate in the administration of a scheme for the consolidation of all electricity works for the purpose of the uniform distribution of current. The Saxon Second Chamber in December, 1917, voted forty million marks for developing state electricity works on condition that light and power should be furnished at cheap rates for industrial and commercial use. In Bavaria, a syndicate has been formed to exploit the water power on the Lower Inn, backed by the Deutsche Bank and native Bavarian financial and industrial interests. This syndicate has two million marks at its disposal for preliminary work and it is estimated that the complete scheme will require 150 million marks. Another scheme, backed by the A.E.G. of Berlin proposes a development of Bavarian water power to be begun three months after the conclusion of peace, the estimated output being over 21 million kilowatt hours. Prussia seems to be committed to the policy of State control of electricity supply.

In Austria, the government announces the establishment of a special department of the Ministry of Public Works to control the electrical system which is to be augmented by a great development of water power. This system is to be centralized and future concessionnaires, whether private or public, made to conform to the general scheme. In Hungary, similar legislation is in preparation.

---

[*] The Allgemeine Elektricitats Gesellschaft of Berlin.

The above summary sets out briefly what is taking place in other countries and renders it quite obvious that mechanical energy is the life-blood of the national industrial body, and that the nation which has a dependable source of power capable of producing energy cheaper than other nations will have a tremendous advantage. It behoves Canada, therefore, to take steps, and quickly, to assure her industries of adequate supply of cheap power. To quote again from the British Board of Trade report, we find the recommendation, "That government should recognize the dependence of the State both from military and industrial standpoints, upon the supply of electrical energy regarded as a 'key industry.' "

In the course of little more than a generation, electricity has, by a series of swift, offensive movements, made a conquest of the lighting, heating, transport and industrial power fields, and seems likely, for most purposes, to displace other forms of mechanical energy. As successful competition in the commercial world depends very largely upon the resourceful use of electric power, whether obtained from fuel or water power, the consideration of measures by which it may be readily available in dependable quantities and at low rates, is a matter of vital importance, as affecting the position of Canada in the approaching period of reconstruction.

Until the organization of the Dominion Power Board, no adequate attempt has been made to mobilize for the general advantage of Canada, the various Dominion and provincial organizations having to do with the administration and the investigation of the fuel and power resources of the Dominion. In co-ordinating and directing the efforts of these various organizations, the board has a good opportunity for rendering service not only to Canada but to the Empire at large.

INVESTMENTS AND THE MARKET

News and Notes of Active Companies—Their Financing, Operations, Developments, Extensions, Dividends and Future Plans

Cosden and Company.—The earnings of the company for the six months ending June 30th last amounted to $3,819,171 after deducting part of the federal income and excess profits taxes. The total sales for the month of June, 1918, were $2,521,104, compared with $1,545,807 in June, 1917.

Port Arthur Shipbuilding Company.—The first annual report for the fiscal year ended June 30th, 1918, shows as follows: Gross profits, $798,702; expenses, $130,656; net earnings, $666,046; other income, $69,507; total net, $735,553; charges, including estimated Dominion profit tax, $286,711, leaving surplus of $448,842.

Demerara Electric Company, Limited.—The following are the earnings of the company for July, 1918:—

	Gross.	Net.
Railroad	$7,051.34	$ 703.39
Light and power	8,118.73	4,163.81
Miscellaneous		187.31
Total		$5,054.51

Trinidad Electric Company, Limited.—The following are the earnings of the company for July, 1918:—

	Gross.	Net.
Railroad	$10,483.02	$2,561.31
Light and power	10,222.32	3,552.92
Ice and refrigeration	3,333.19	701.32
Total		$6,815.55

Murray-Kay, Limited.—The annual general meeting of the company was held on the 16th inst. in the company's board room. Much interest was manifested in the reorganization plans submitted to the shareholders. These met with practically unanimous approval, and the directors were authorized to proceed with the plans of expansion for which capital will be provided. The board of directors elected consists of Messrs. R. P. Gough (president), W. Parkyn Murray (vice-president), A. E. Dyment, H. J. Daly, C. A. Barnard, and W. T. Bradshaw.

Kerr Lake Mining Company.—During the month of August the company produced upwards of one-quarter of a million ounces of silver. This compares with 231,000 ounces in July. With the exception of the month of May, the August record was the highest in the company's history. The company's fiscal year ended August 31st, with a total output for the year of upwards of 2,575,000 ounces.

With the prevailing high price of silver it is evident, therefore, that the Kerr Lake Company has just closed the most profitable year in its history.

Temiskaming Mining Company, Limited.—The directorate of the company issued a special report to the shareholders on September 11th. The production for the five months ending May was 391,367.50 ounces, while the ore reserves are estimated by the manager at 101,498 ounces. During the six months ending June last considerable development work was carried on, the footage in drifting, cross-cutting, winzing and raising totalling 1,496.2. There are still on the property three unexplored areas in which there are said to be reasonable possibilities of finding commercial ore bodies. It is ten years since the mine began shipping silver, while the total shipping production up to the end of 1917 was 10,837,921 ounces.

Granby Consolidated Mining and Power Company.—Production of the company in August amounted to 2,820,207 pounds, compared with 2,167,077 pounds in July, 3,438,521 pounds in June, 3,808,185 pounds in May and 3,689,982 pounds in April. In August of last year the output of the company was 3,836,770 pounds. Of last month's total, the Anyox plant produced 2,426,313 pounds, contrasted with 1,494,788 pounds in July, 2,549,381 pounds in June, 3,036,550 pounds in May, and 3,048,012 pounds in April. In August of last year the Anyox plant turned out 2,918,958 pounds.

The Grand Forks plant contributed 398,894 pounds to the total in August, against 672,289 pounds in July, 889,140 pounds in June, 771,635 pounds in May, and 641,970 pounds in April. In August of last year this plant produced 917,812 pounds.

Nipissing Mining Company.—In his report to the president and directors of the company, Manager Hugh Park says that during the month of August the company mined ore of an estimated value of $250,737 and shipped products from Nipissing and customs ore of an estimated net value of $484,978.

Some small veins encountered at 73 shaft and at 96 tunnel were sufficiently encouraging to warrant further development. Development on all the "town" veins was somewhat hampered during the month on account of the aerial tramway line connecting 73 shaft with the low-grade mill being partly destroyed. Several stores situated underneath the tram line were consumed by fire. The line was out of commission for ten days. During that time it was impossible to hoist any ore from 73 shaft, and it was necessary to provide the low-grade mill with tonnage from the township side of the lake. Most of that tonnage was low-grade material. Consequently the production from both the washing plant and the low-grade mill for the month was decreased. The high-grade mill treated 98 tons and shipped 462,965 fine ounces of silver. The low-grade mill treated 6,890 tons.

A wheat crop of from 150,000,000 to 160,000,000 bushels is estimated by W. P. Hinton, of Winnipeg, vice-president and general manager of the Grand Trunk Pacific. "There have," he said recently, "been various estimates, from 135,000,000 to 190,000,000, but the figures I have given may be taken as nearly accurate, although this year it is difficult to make any sort of definite estimate."

PERSONAL NOTES

Mr. R. P. Gough has been re-elected president of the Murray-Kay Company, Limited.

Mr. R. Kerr Houlgate has been appointed liquidator of the Bank of Vancouver in place of the late Ewing Buchan.

Mr. S. V. Moulton, recently of the Sterling Bank's office in Regina, has become manager of its branch at Kirkfield, Ontario.

Mr. J. G. Wilson, manager of the St. Lawrence Underwriters, Toronto, is at present making a tour of the western provinces.

Mr. C. A. Magrath, fuel controller for Canada, has been appointed director of coal operations for Nova Scotia and New Brunswick.

Mr. George Chahoon, Jun., president of the Laurentide Company, will presently join the ranks of the industrial experts in the war service of the United States government.

Mr. M. J. O'Brien has been appointed to the Canadian Senate. He is president of the Capital Trust Company, of Ottawa, and a director of the Bank of Ottawa.

Mr. H. V. F. Jones, assistant general manager of the Canadian Bank of Commerce, is on a tour of inspection of Western Ontario branches.

Mr. H. C. Cox, president of the Canada Life Assurance Company, accompanied by Mr. Saunders, treasurer, and Mr. Ramsay, assistant superintendent, has started west on a trip which will embrace a number of important points.

Mr. Charles L. Armstrong, publicity commissioner for the Victoria and Island Development League, was given a banquet on September 9th, on the eve of his departure for Vancouver on his way to Chicago, where he is to engage in new work.

Mr. Justice Trenholme, of Montreal, who has been a member of the Court of King's Bench of the province of Quebec for many years, has presented his resignation to the government, and it has been accepted. His retirement creates the third vacancy in the Quebec courts.

Mr. William J. Langton, superintendent of the Dominion Transport Company, in Toronto, has been appointed general manager of the company with headquarters in Montreal. He will assume his new duties the first of next month, and will be succeeded by Mr. Richard Walker, agent at Ottawa.

Dr. J. B. Calkin, the oldest and most widely known educationist in the Maritime Provinces, died on September 17th, after an illness of two weeks. The late Dr. Calkin was for many years principal of the Provincial Normal College, and was the author of several text-books on geography, history and pedagogy.

Mr. Laurence Palk, assistant to the general manager of the Winnipeg Electric Railway, has also been appointed assistant secretary of the company as well as secretary of the Winnipeg, Selkirk and Lake Winnipeg Railway. Mr. Palk's connection with the company in a secretarial capacity dates back fourteen years.

Mr. J. K. L. Ross has resigned his position as chairman of the Pensions Board at Ottawa. Mr. Ross has been head of the board since its inception and has given his services to it gratuitously. It is understood that he objected to the appointment of the members of the staff by the civil service commissioner. Colonel Labatt, who was a member of the board, has also resigned.

Mr. B. L. Robertson has been appointed to the position of auditor-in-chief of the Foundation Company in Victoria. Mr. W. F. Burris, of the local staff, has been chosen as Mr. Robertson's assistant. The new auditor-in-chief will look after all accounting in connection with the shipbuilding firm and will shortly have offices in the business section of Victoria. He has till recently been the office manager of the Tacoma plant.

H. O'HARA & COMPANY ASSIGNMENT

On Friday, the 13th inst., the firm of H. O'Hara and Company, stock brokers, of Toronto, made a voluntary assignment. The company handed its affairs over to G. T. Clarkson and Company, assignees.

This was one of the oldest firms of stock and bond brokers in Toronto, but of late years they have not been very active. One of the principal members, Mr. H. R. O'Hara, was drowned in the "Empress of Ireland" disaster several years ago, and Mr. Henry O'Hara, original founder of the firm, died a few months ago. They have a seat on the Toronto Stock Exchange. There is no connection between this firm and the London, England, firm of the same name.

MONEY MARKETS

Messrs. Glazebrook and Cronyn, exchange and bond brokers, Toronto, report the following exchange rates to *The Monetary Times*:—

	Buyers.	Sellers.	Counter.
N.Y. funds	2 1-64	2 3-64	....
Mont. funds	par	par	⅛ to ¼
Sterling—			
Demand	$4.85.10	$4.85.20	$4.87
Cable transfers	4.86.20	4.86.40	4.88

Rate in New York for sterling demand, $4.75.45.

Bank of England rate, 5 per cent.

RAILROAD EARNINGS

The following are the earnings of Canada's transcontinental railways for the first two weeks in September:—

Canadian Pacific Railway.

	1917.	1918.	Inc. or dec.
Sept. 7	$2,666,000	$3,053,000	+ $387,000
Sept. 14	2,691,000	2,915,000	+ 224,000

Grand Trunk Railway.

Sept. 7	$ 992,613	$1,346,536	+ $353,923
Sept. 14	977,154	1,415,000	+ 437,846

Canadian Northern Railway.

Sept. 7	$ 715,800	$ 901,000	+ $185,200
Sept. 14	751,300	873,900	+ 122,600

QUEBEC RAILWAY, LIGHT, HEAT & POWER CO.

The gross receipts of the Quebec Railway, Light, Heat and Power Company for its financial year ended June 30th, 1918, were less than for the previous year by $34,179,000, according to the report submitted at the annual meeting in Montreal on the 10th inst. The decrease is accounted for by Mr. W. J. Lynch, the general manager, by the closing of the Ross Rifle factory. Not only was this company a big consumer of power, but its operation occasioned the transporting of 3,000 men daily to and from the plant. It is expected the factory will be reopened about October of this year by the North American Arms Company, which has taken it over. About 2,000 men will then be employed, which number will likely be increased to 3,000 by January. The increase in operating expenses is largely due to the advance in the cost of labor and materials. After the payment of operating and maintenance expenses, fixed charges and taxes, there was a net surplus of $95,306. To this is added the surplus from the previous year and a deduction was made for obsolete cars, leaving a credit surplus account of $753,091.

When asked regarding the payment from the government for the Quebec and Saguenay Railway, the president, Sir Rodolphe Forget, said that $247,000 had already been received and the balance was expected shortly. Increases were recently granted to the employees to the amount of about 20 per cent.

The same board of directors was re-elected as follows: President, Sir Rodolphe Forget; vice president, Lorne C. Webster; directors, Messrs. Chas. A. Lavigne, L. J. Tarte, Paul Galibert, L. G. Morin, Art Picard, J. T. Donohue, T. J. Stewart, General A. E. Labelle; general manager, W. J. Lynch; secretary, Arthur Lemoine.

TAXATION AND BOND PRICES

With the growth of the Canadian income tax, and the rapid increase in the number of tax-exempt bonds of the Dominion of Canada in the country, there has arisen a feeling that this exemption is unjust to the holder of other securities, and to the small investor who is not subject to the income tax. Many journals have criticized the feature, and Mr. I. W. Killam, of Montreal, states the arguments against it very effectively in recently published letters.

When we first commenced to issue war loans we were doubtful as to our ability to do national financing on a large scale, and exemption from any taxes which might be imposed by the Dominion was one of a number of attractions attached to the bonds in order to coax funds into this channel of investment. Even then, the exemption was of relatively small importance compared with its value at the present time, as it was only in 1917 that we adopted a federal income tax; now we know this to be a permanent means of raising revenue, which will be utilized more and more as our requirements grow. While many believe our policy to have erred from the start, few would care to criticize its adoption; no strong dissenting voice was raised at the time.

Now, however, we know more of our capacity for national financing. We know that we can continue to meet our own war needs, provided they do not grow much greater than they are at present. The public have already been educated to the value of our war bonds, and by paying a rate of interest in accordance with market conditions further loans can be raised indefinitely. The tax-exemption feature is quite dispensable, though undoubtedly a somewhat higher interest return would be necessary to compensate for its removal. There is no question as to the fact that injustice arises from this cause. Tax-exempt bonds are peculiarly attractive to the man of large income in Canada, who now pays a considerable rate of income tax. He is willing to purchase them on a lower interest basis, and his bidding in the market supports the price at which they are traded in; his heavy subscriptions contribute largely to the success of the flotations and make it possible to issue them at lower prices than would be the case were they taxable. This buying competition must be met by the small investor who does not worry about the income tax, and in subscribing for our loans or purchasing them in the market he is therefore paying for something of little or no value to him. He might easily profit better by investing in higher yielding securities, which are subject to taxation.

That the growth of the income tax is an effective factor in determining the price of war loans is illustrated by the fact that during the past nine months, during which it has become known that the tax will be raised, the selling price of Victory Loan bonds has increased from 98⅞ to 99½, and from 99½ to par. Three-quarters of a billion of tax-exempt bonds have been issued, and holders of other securities naturally deplore the existence in Canada of around forty millions of non-taxable income. The recent agitation is the result of the realization that the income tax is going to be something to be considered in our economic life; we had the income tax many months ago, and the point could have been just as well urged at that time.

As regards the bonds already issued, this condition cannot be remedied, as our national pledge must not be broken. No doubt the preparations for our new half-billion tax-exempt loan are already too far advanced to admit of change. When the plans for this loan were made some weeks ago the question was carefully considered, and the opinion of the majority of those consulted, including not only the bond-dealing element but representatives of other interests, was in favor of the exemption. This may, however, well be our last issue of this kind, and future loans should be shorn of the privileve.

Admitted that taxable bonds would be preferable, and that we can raise loans equally well by issues of this kind, there is no doubt but that the cost to the government would be greater. The interest rate would have to be more favorable, and the distribution of the loan would be different. A yield of five and three-quarters or six per cent. would make the bond more favorable to the man of small means, but they would not appeal to the man of large income so much because they would be taxable. The existence of one billion and a quarter of tax-free bonds will, moreover, complicate the situation, because these are available for purchase in the market. There would no doubt be a strong demand for them, until the increased cost adjusted the value of tax exemption. The man of large means would have to pay more for them; the small holder would probably dispose of them at a profit, and purchase the higher yielding taxable bonds; and the government would lose, because it would have to float its loans at a higher interest basis, and would collect little more income tax, through the large holdings of tax-free bonds which men paying heavy rates would make it a point to acquire. But the justice of the contention, nevertheless, remains, and a concession which results in the advantage of particular classes should not be retained any longer than is necessary.

PUBLIC AND PRIVATE CREDITORS

Seed grain liens for the year 1919 will no doubt be considered shortly, and the old system is due for one or two important revisions. Whether it is the proper function of the Dominion Government to make such loans is itself open to question, but if it does so it should not interfere with the security of mortgage holders. The loans were first made in 1915 under the authority of Dominion and provincial legislation. It was enacted that the government should have as security for the loan a first claim upon the land and its produce. The security of mortgage holders was, therefore, undermined without regard to the standing of such securities in view of foreign holders.

The rate of 5 per cent. which was fixed in 1915 has remained, whereas the market price for money has been increasing and even for a farm loan secured by a prior lien on good land, the rate is 6½ or 7 per cent. In the West, the Dominion government is, therefore, not only assuming the best security but is also loaning at rates much below the present market and below the rate at which it borrows itself. When Canada is borrowing heavily, as at present, the use of money is worth about 5¾ per cent. per annum, and the people as a whole are, therefore, paying three-quarters of one per cent. in order that the western farmer may secure capital at 5 per cent. to invest in business which is offering greater profits than it has ever done before.

If it was the case that a large section of the West was filled with recently arrived immigrants who were in danger of being forced off the land through a single crop failure, there might be some justification for government assistance of this kind at the public expense. Most of the grain growers have, however, been established for several years, and with possibly a few extraordinary exceptions they have all had two or three successful crops which they have sold at unusual prices. What immigration there has been into the Canadian West during the past three years has been mainly from the United States, and almost invariably the immigrants have been former agriculturists who have sold their property there and are quite capable of surviving one or two unsuccessful seasons. Extraordinary assistance granted to meet extraordinary circumstances should not be maintained beyond the period of necessity.

The banks operating in the West have the utmost confidence in the credit of the farmer and his ability to pay, and are at all times prepared to make such advances as his condition warrants. A mortgage holder, moreover, would, in his own interest, willingly leave over the payment of interest for a year or so rather than adopt any foreclosure proceedings, because he knows that if the land has value at all, it can be used profitably at the present time. Mortgage holders have continually objected to the action of the Dominion government in transferring them to a secondary position from the point of view of security, and rightly so. In return, it is expected, of course, that mortgagees will display reasonable leniency to assist in the task of production.

NEW CROP AND THE EXCHANGE MARKET

Up to the date of writing, the market for New York funds in Montreal and Toronto has not been sensationally affected by the near approach of the grain export movement. The quotations have dropped off to a certain extent but the premium still stands not far from the 2 per cent. level. In the West, threshing is now general, and wheat is already moving to market. However, in the ordinary course it is usually some time in October before the exporters' bills of exchange become numerous enough and large enough to influence the exchange market notably; and in these war times the special measures and regulations put in force by government sometimes operate to affect the financial and trade movements considerably.

The Dominion government's recent announcement guaranteeing a market for the surplus wheat produced in 1918, at the prices fixed by the Board of Grain Supervisors for Canada, rather created the impression that the financial arrangements for the purchase of the Canadian wheat crop of 1918 by Britain have not yet been definitely completed; and that in case of the earlier deliveries, it might be necessary for the Dominion government to implement its guarantee—that is to say, the government may be required to take delivery of the grain from the Canadian dealers and shippers, pay for it, and retain the ownership until such time as the British government has definitely arranged to take all that is offered. It will be seen that the effect produced on our exchange market will depend largely upon the manner and method of financing the harvest movement. In ordinary times the shippers at Winnipeg and other Canadian centres would draw their bills of exchange on the consignees in the United Kingdom or in New York, and in either case we would have the funds at the American centre practically at once. If it devolved, on the other hand, that our government buys the wheat in the first instance, paying for it with Canadian funds, and holds the title thereto for several weeks, the effect upon the exchange market will not be so immediate. The bills of exchange would not be so promptly available for negotiation at New York, and the relief to our importers and others who have large payments to make in the United States would be postponed.

Should it be the case that Great Britain has agents ready to buy all our wheat as it comes forward, payment being made promptly in American funds, we might expect to see that premium on New York drafts shrink or disappear some time next month or in November. Even if, under the pressure of heavy shipments of grain, the

quotations for American funds fall to or near par, it might not be a lasting phenomenon. Those who have remittances to make to the United States at a later date—say, after the turn of the year—will then have to decide the question whether it would be best for them to cover their requirements in November or early December (when exchange perhaps will be low) or run the risk of a recurrence of the high premium in January or February. Last year the premium mounted to a high level promptly in January; and with a few temporary spells of depression it has ruled around 2 per cent. for eight months. This experience may not be repeated in 1919, but it is necessary to remember that the fundamental trade conditions as between ourselves and the United States, which ordinarily govern the exchange situation, have not meantime changed materially.

LABOR CONGRESS AT QUEBEC

Politics, Military Service, Industrial Disputes, Wages, Working Hours and Education are Discussed

The 34th annual convention of the Trades and Labor Congress of Canada opened on the 16th inst., in Quebec, with 418 delegates from all parts of the Dominion in attendance. The report of the executive council was presented in the morning. This report is practically a review of the policy of organized labor in Canada, and is therefore of deep interest to all branches of commercial and industrial life.

The report announced that, viewing the situation from both the industrial and political aspects, the organized labor movement has every reason to be proud since the last convention. The report points out that the somewhat astonishing decline in the membership of trades and labor organizations during 1915 and 1916 afforded cause for anxiety, but the turning of the tide during 1917 and 1918 had more than compensated for the strenuous efforts to prevent a further slump in membership. At the close of 1917 the membership for all classes of trades unions was 204,630, comprised in 1,974 branch unions, a total increase for the year of 44,223 in membership and 132 in local unions. During the year 1917 there were 4,839 trades unionists enlisted for active service. With the enforcement of conscription, the total of unionists with the army rose to 32,000. The report states that the large increase in the membership of the unions has given added virility to the movement for increased wages to meet the increased cost of living.

Many Disputes Settled.

Through the Industrial Disputes Investigation Act, many disputes had been settled in the interests of the workers without resort to strikes, and while strikes had been necessary in some cases, in proportion to the number of demands for higher wages, the industrial disturbances had been few. In the political field, the report continues, considerable progress has been made, both in the recognition of the organized labor movement by the government and in the organization of the Independent Labor party in the different provinces. Prior to the general election, it is contended in the report, the congress had every reason to protest against the action of the government in ignoring the demands of labor and unlike the governments of other allied countries, no action had been taken to co-operate with the labor movement in the prosecution of many of the essential policies of the war.

With the entry of the union government into power, there was an immediate change in the policy and the representatives of organized labor were invited to Ottawa to confer with the members of the war council and the cabinet with reference to such important questions as to the conscription of labor for farm and industrial purposes, national registration, the enforcement of the Military Service Act, and other vital questions.

There was also a noticeable change in the attitude of the Imperial Munitions Board towards the labor organizations and the friction which was so evident during 1917 has almost disappeared. The most important advancement in the political field has been the carrying out of the recommendation of the Ottawa convention that the different provinces organize branches of the labor movement along the same lines as the British Labor party.

For Political Action.

At least seven of the provinces have already organized for definite political action. There has been a noticeable tendency on the part of the workers holding different views as to principle and tactics to emphasize the points of argument and minimize the points of difference. This attitude has led to the uniting of trade unionist and socialist and the prospect for a strong and aggressive national labor party were never brighter than they are to-day.

Dealing with the need for a thorough organization, the report says that there are only 4,980 women in the ranks of the unionists. However, in the machine and textile industries, important progress has been made. The enfranchisement of women, the report argues, has made it all the more necessary that women should be organized industrially as well as politically.

War Policy Unchanged.

In regard to the war, the executive council states its attitude is the same as it was in 1914, when it was announced that "our quarrel is with autocracy and not with democracy, hence our quarrel is with the German government and not with the German people."

While, however organized labor was considering every available means of assisting the Dominion in its efforts to play an honourable, patriotic and effective part in this epoch-making struggle, it must not allow the future to be obscured, nor the interests of the working classes which it holds to be overlooked or neglected.

The council reports that on the subject of conscription, after the verdict at the polls last year, it sees no object, good, bad or indifferent, would be attained in referring to it. The report also touches on government ownership of railways, approving of the acquisition of the Canadian Northern Railway and the Grand Trunk Pacific, and stating that the congress cannot be satisfied until the Canadian Pacific Railway is included in the railways under government control; demands from the government a declaration of policy on the question of ownership and control of aircraft, regrets that the government has done very little to meet the wishes of the congress with reference to the increasing of the pensions of soldiers, recommends that the executive be authorized to press for amendments to the Industrial Disputes Investigation Act, urges that the committee be entrusted with the work of organizing women workers, and suggests that the folly of expecting new industries requiring technically trained men can be conducted in Canada without a progressive policy of technical education be pointed out to the government.

Unity of Labor.

In conclusion the executive council expresses "particular satisfaction at this gathering in the province of Quebec, the home of our French-Canadian fellow workers, as it demonstrates the unity and universality of labor."

The report of President J. C. Watters on his work as parliamentary representative states that the record of the last session of parliament, the orders-in-council issued, the administration of the various departments of government together with the industrial unrest so much in evidence, all herald the approach of a new day. Mr. Watters continued:—

"It is yet to be seen whether the new day will see civilization dead and the world of human beings thrown into a state of chaos, or whether a democracy will be born such as that of which philosophers and poets have dreamed and sung and for which the slaves and serfs and poverty-oppressed of all the ages have hungered."

Mr. Watters' report gives a synopsis of all legislation dealt with at Ottawa during the last session of parliament and also details the part he has been called upon to play in the settlement of industrial disputes among the miners and steel workers in Nova Scotia, the moulders at Toronto, the operators of the Great North Western Telegraph Company and the letter carriers.

On the 17th instant the War Industries Board of the United States issued an order eliminating 5,500 styles of rubber footwear with a view to saving in manufacture and packing.

DIVIDEND NOTICE

The Bank of British North America

Incorporated by Royal Charter

The Court of Directors hereby give notice that an interim dividend for the half year ended 31st May last, of Forty Shillings per share, less Income Tax, being at the rate of eight per cent. per annum, will be paid on the 5th day of October next to the Proprietors of shares registered in the Dominion of Canada.

The Dividend will be payable at the legal par of exchange on the 5th day of October next.

No transfer can be made between the 21st instant inclusive and the 4th proximo inclusive, as the books must be closed during that period.

NEWSPRINT INQUIRY IS RESUMED

Commissioner Pringle Gives Hearing for Two Days, to be Renewed on September 23rd

The inquiry at Ottawa into the cost of the production of newsprint in Canada, was resumed on the 12th inst., by Commissioner Pringle. The investigation will be followed by the fixing of a price for newsprint by the commissioner in his capacity as controller. The price will probably apply to a six months' period, October 1, 1918, to April 1, 1919. The manufacturers of newsprint, with the exception of the Price Brothers and the Belgo-Canadian mills, which have withdrawn from being parties to the inquiry, alone were represented at the hearing on the first day. Mr. H. A. Stewart, counsel for the government, missed his train to the capital. The Canadian Press Association, which had protested against the inquiry proceeding, on the ground that the notice given was too brief, was not represented.

Referring to the absence of counsel for the Canadian Press Association, Commissioner Pringle expressed regret, but said that, in view of the necessity of action being taken this month, he would have to proceed.

Request to Extend Scope.

A feature of the proceedings was an application by Mr. Geo. Montgomery, K.C., to the commissioner to enlarge the scope of the inquiry so as to include investigation into the present financial position of the newspapers, and the extent to which they have passed the increased cost of newsprint along to the public. Commissioner Pringle said he would give consideration to the request.

The afternoon sitting was devoted largely to the hearing of accountants, who have been inquiring into cost of production at the mills. It developed that the higher freight rates and the increased cost of wood and wages have been the chief things responsible for the greater cost of production.

P. E. Wilson, vice-president of the Spanish River Pulp and Paper Company, in testifying, expressed the view that the mills are entitled to a profit of $20 per ton.

United States Evidence Admitted.

In the morning session of the inquiry the commissioner suggested that the evidence as to cost of production of newsprint in the United States before the Federal Trade Commission at Washington be accepted as part of the record. The taking of it, he said, would involve considerable time and expense.

Mr. Montgomery agreed that this matter had been gone into very thoroughly across the border, and that it would facilitate the proceedings to accept it pro and con, but suggested that evidence as to developments affecting cost of production subsequent to the Washington hearings should be admissible.

Causes of Costlier Production.

Replying to a question by the commissioner, counsel for the manufacturers said that since April 1 cost of production had been increased by higher cost of wood and the advance in railway freight rates. Mr. Montgomery then made his application for the enlargement of the scope of the commission. It had been maintained in the earlier stage of the proceedings, he said, that the publishers could not pass on the increased cost of newsprint to the public. He was prepared to show that the cost had been passed on to such an extent that on circulation alone the public is paying $4,624,000 annually. The total consumption of newsprint in Canada for a year, he asserted, was from eighty to one hundred thousand tons, and the higher prices now prevailing on this quantity would cost the publishers approximately $600,000. Mr. Montgomery went on to argue that the newspapers had increased their advertising rates, and that in regard to government advertising of war loans, etc., the Canadian newspapers enjoy advantages not enjoyed by those of the United States. Across the border, he said, the government in connection with its war loan flotations depends upon space contributed by large advertisers and previously contracted for. The government advertising in the daily newspapers amounted to not less than half a million dollars per annum. Full advertising rates were paid by the government.

Mr. George F. Henderson, K.C., counsel for the Booth Mills, said that the Crown lands are one of the most valuable assets of the provinces, and that he had been told by a man prominent in provincial affairs that the provinces view with alarm the crusade made by the newspapers of Canada upon the newsprint industry.

Commissioner Pringle, in promising to consider the application, said that when an inquiry into the position of a newspaper had been suggested before, he had ruled that this was not pertinent to the ascertainment of the cost of production of newsprint. It had been urged at that time by the publishers that the inquiry should extend to an alleged combination which affected the price. He had declined to take up this matter, with the result that the publishers had withdrawn from the inquiry. Commissioner Pringle then referred to his interim report, and the subsequent order in council adopted on the recommendation of a sub-committee of the Cabinet, enlarging his powers. That order in council, he said, had authorized him to enquire into everything he deemed to be fit or proper affecting the use of newsprint.

Probe Papers' Position.

Mr. Pringle said he still had a personal feeling that it would be of no great assistance to him in arriving at the cost of newsprint to go into the business of the publishers of Canada. It was to be remembered, however, that he was now controller of newsprint as well as commissioner. As controller, it would be necessary for him to fix a price that would give the manufacturers a reasonable profit. It might, therefore, be pertinent for him to know something as to the financial position of the newspapers. Half a dozen of the leading papers might be selected, and accountants chosen to ascertain their position now as compared with 1914.

All Mills in Schedule.

The paper controller also referred to matters that were being given consideration in regard to the conservation of paper, which might be brought about in the reduction of the size of newspapers.

Mr. Montgomery, counsel for the newsprint manufacturers, was asked if he had arrived at a ground on which profits of the mills were to be based. It was pointed out that if the price was set a low-cost mill would make larger profits than a high-cost mill; in such cases the percentage of profit per ton would differ. In regard to the suggestion that in considering the setting of a final price the Fort Frances and the Brompton mills be dropped, Mr. Montgomery said he thought it was obvious to the newspaper publishers, as well as the manufacturers that all the mills should be considered in the schedule. Fort Frances and Brompton are considered the two highest cost mills in Canada. The auditors' report of the Fort Frances company was was received and questioned on.

At the afternoon sitting Commissioner Pringle delved into the report of the accountants who inquired into the cost of production of newsprint by the Fort Frances mills. Mr. Taylor, an accountant on the staff of Mr. Geoffrey Clarkson, of Toronto, stated under examination by Mr. Montgomery, that pulpwood used since April 1 cost $4.16 more than that used during the previous year. As approximately one and a half cords of wood is required to make a ton of newsprint, the cost of the production of paper has been increased by upwards of $6 per ton.

Thinks $20 Fair Profit.

Mr. P. E. Wilson, vice-president of the Spanish River Pulp and Paper Company, in testifying, stated that $20 per ton profit was, in his opinion, a fair and just allowance above the cost of manufacture. Witness did not go into detail as to how the profit should be made up.

"Can you tell me a mill that made $20 per ton in a competitive, untrammeled market? asked the paper controller. But neither Mr. Wilson nor any of the newsprint manufacturers present could state such a profit had been made per ton on pre-war prices.

How Costs Were Increased.

The examination followed of paper mills of this country for the purpose of showing how the award of the War Labor Board in the United States and the new freight rates added to the cost of manufacture. To the Spanish River Mills the increase due to the new wage award added $3.44 per ton, and the increase in freights on incoming materials 96 cents per ton. Wood costs increased $2.43 per cord, and as one and one-half cords of wood was used per ton, this increase would amount to $3.64, making a total increase of $8.04. For the Laurentide Company, the increase in wages added about $2 per ton, and wood costs advanced it $3.67. To the St. Maurice Pulp and Paper Company, the increase in wages amounted to $3 per ton, and freight rate on material $1.75

per ton. The June costs of the Laurentide Company, as shown by the report of the official auditors, Messrs. Clarkson and Sharpe, was $42.31, and the May cost $39.37. The May cost of the Fort Frances Company was $62.26.

Friday Session of Inquiry.

A more detailed and definite statement by Commissioner Pringle as to his intention to issue a new order before October 1st, fixing a new price for newsprint, and the announcement that the inquiry would be adjourned from to-day until Monday, September 23, when the commissioner hopes that the publishers will be represented, were the features of the newsprint inquiry, resumed on the 13th inst. The commissioner explained that the new order would be for 30 days, but that it would be renewable from month to month, probably until July 1, 1919. The order, he said could not constitute a hardship for anybody concerned because of the fact that provision has been made for a reference to an appeal tribunal in case either the publishers or the manufacturers are not satisfied with it.

When the sitting opened. Mr. H. A. Stewart, government counsel, agreed to the inclusion in the records of evidence taken in the inquiry before the Federal Trade Commission at Washington. He thought it very proper that this course should be adopted, as it would save much time and expense.

Wants Publishers Represented.

The commissioner then made reference to the absence of counsel representing the Canadian Press Association. Personally, he said, he could not agree with the claim of that body that sufficient notice of the sittings had not been given. All the statements of accounts, etc., now under review had been placed in the hands of the publishers and they must be fully advised of everything up to the present time. At the same time, continued the commissioner, "they probably know best as to how they stand, and I would not like to do anything in this matter that would injuriously affect them." He then repeated his statement of yesterday that should the publishers come into the inquiry later on, their counsel would be given opportunity to examine witnesses. "My desire always has been," said Mr. Pringle, "that the publishers should come in and give me what assistance they can." Commissioner Pringle emphasized the necessity of fixing a price to become effective October 1 for a 30-day period, renewable from month to month, probably until July 1 next. The price would be based upon the evidence now in and the evidence to be submitted at the present sitting and on September 23rd. He would require time between September 23rd and October 1 to prepare his order and report. He would endeavor, he said, to fix a price that would give the manufacturer a fair return on his investment.

Henderson Not Hopeful.

Geo. F. Henderson, K.C., remarked that the publishers have been in close touch with everything that has been done. They have had an opportunity to cross-examine Mr. Clarkson privately

"Everything that has been done has been under my direction I authorized Mr Clarkson to give the publishers any information they desired," the commissioner said.

Mr Henderson went on to say that the manufacturers would, if possible, produce any witnesses which the publishers must desire to have called.

Mr Stewart government counsel, stated that he had been in conference with representatives of the publishers and had been informed by them that they desired to secure some additional information regarding new features of the inquiry. He had suggested a conference between representatives of the publishers and Mr Clarkson The publishers, he said, had expressed a desire to come into the inquiry, and he believed that they would do so "You are an optimist," observed Mr. Henderson.

Commissioner Pringle said that he was relieved to hear these statements made by government counsel Some discussion followed as to the desirability of proceeding with the inquiry to-day, and the commissioner stated that he did not desire to proceed farther than was necessary to make progress.

It was agreed to receive the reports made by the accountants who had conducted an inquiry as to the cost of producing paper at the half dozen mills selected for this purpose some months ago. They showed that the highest cost of production was at the Fort Frances mills, the figures being $62.80 per ton of newsprint, while the lowest cost was at the Laurentide mills, where newsprint is produced for $39.36 per ton. After some discussion as to the basis on which the capitalization of the companies should be considered, the inquiry was adjourned until September 23.

Appeal Tribunal is Formed.

A little later an order in council was passed by the government constituting the judicial tribunal to which appeals may be taken from orders issued by Commissioner Pringle fixing the price of newsprint. The appeal tribunal will have power to hear additional evidence in the event of either the manufacturers or the publishers objecting to any order issued, but all orders will remain effective until the appeal tribunal has given judgment. The appointment of an appeal tribunal is in line with a recommendation made by Commissioner Pringle in his interim report issued in January last. The personnel of the appeal tribunal has not been officially announced, but it is understood that it will consist of Mr. Justice Archer of the Superior Court, Montreal, Mr. Justice Masten and Mr. Justice Middleton, of the Ontario Supreme Court.

LIGNITE UTILIZATION BOARD

The members of the Lignite Utilization Board, which is to develop the lignite resources of Saskatchewan, are Mr. R. A. Ross, of Montreal, an engineer; Mr. J. M. Leamy, provincial electrician of Manitoba, and Mr. J. A. Sheppard, a business man of Moose Jaw. They all serve without remuneration. The board will have charge of the four hundred thousand dollar plant to be erected jointly by the governments of Canada, Saskatchewan and Manitoba. The Dominion will bear one-half of the cost and the provinces $100,000 each.

BETTER REFRIGERATOR FACILITIES

Hon. T. A. Crerar, minister of agriculture, the principal speaker at the Central Canada Exhibition luncheon in Ottawa on the 13th inst., announced that the department of agriculture had under consideration and study a first-class refrigerator and cold storage system for Canada. He paid tribute to what the farmers of Canada had done, stating that 100,000 of them had been enlisted to date.

Prof. Grisdale, deputy minister of agriculture, presided, and the other speakers were Sir Patrick McGrath, food controller for Newfoundland, and Prof. Barton, of Macdonald College.

Mr. Crerar said: "No part of the population has made greater sacrifice or done more than the farmers of Canada since the beginning of the war, and we have enlisted 100,000 farmers, yet despite this the production of the past year in foodstuffs has been the greatest in our history."

With regard to marketing problems, he said he was surprised to learn last year that a shipment of beef destined for overseas had to be sent back from Mostreal to be refrozen. He added that one of the most necessary things in Canada for the development of the whole producing industry was a first-class refrigerator service on trains and boats and a first-class storage system. He announced that the department of agriculture had this under consideration.

He predicted that there would be an increasing demand for Canada's foodstuffs in the United States after the war.

Prof. Barton, of Macdonald College, said one of the great difficulties which has faced the live stock men has been with regard to the supply of labor and feed for the stock.

Sir Patrick McGrath, food controller for Newfoundland, said that he was in Ottawa for the purpose of negotiating for a supply of the necessaries of life for the people of Newfoundland until next harvest. He was glad to state he had been assured that Canada would supply what Newfoundland needed He expressed the hope that the day was not far off when the colony would be able to send stocks of fish to Canada, with which the people of Canada were not quite familiar

A union of the city of Esquimault with Victoria is being considered Esquimault became constituted as a separate municipality in 1913 and immediately adjoins Victoria

Municipal Law to be Completely Revised

British Columbia Commissioners Present Report Recommending Appointment of a Local Government Board—Municipalities to be Divided into Four Classes—Stricter Control over Municipal Government

RECOMMENDATIONS which propose important and drastic changes in the municipal law of the province of British Columbia, and which have practically received the official O.K. of the attorney-general, have been presented to the government by Mr. F. A. McDiarmid, solicitor for the British Columbia Union of Municipalities, who, with Municipal Inspector Robert M. Baird, have been at work for the past three months making a full report upon the existing act, which, it is generally conceded, is wholly inadequate to meet the municipal situation in the province.

At the recent session of the legislature a deputation, representing the British Columbia Union, met the government, and it was decided that, instead of bringing forward more amendments to the existing act, that a complete revision thereof should be made by the government and a report to be submitted to the Union at its forthcoming annual convention should be prepared, to be passed upon by the Union, and suggested changes would be considered by the government, so that at the next year's session of the legislature an act framed upon the recommendations could be brought down.

The report, now completed, suggests the appointment of a local government Board, the general duties of which will be the oversight and control of all municipalities in all matters affecting finances, of joint municipal interests and the relationships between municipalities and public service corporations, including rates and tolls, and all other matters of administration of such utilities where such affect the interests of the municipalities. This local government board will also exercise the functions of a public utilities commission, a body which, it was recently announced, the provincial government proposes to appoint.

Classify Municipalities.

It is recommended that the municipalities of the province be divided into classes, those of the first class to be Victoria and New Westminster (Vancouver, by virtue of its special charter not coming within the scope of the report except so far as the operations of the Local Government Board are concerned). Those of the second class to be Burnaby, Chilliwack, Cranbrook, Duncan, Enderby, Fernie, Grand Forks, Kamloops, Kelowna, Ladysmith, Nanaimo, Nelson, Oak Boy, Prince Rupert, Revelstoke, Rossland, North Vancouver, North Vancouver District, Point Grey, Saanich, South Vancouver, Trail and Vernon. Municipalities of the third class will be Alberni, Armstrong, Courtenay, Coquitlam City, Cumberland, Esquimalt, Greenwood, Kaslo, Merritt, Phœnix, Port Alberni, Port Coquitlam, Port Moody, Prince George, Salmon Arm, Sandon and Slocan. Fourth class municipalities are Chilliwack, Coldstream, Coquitlam, Cowichan, North Delta, Kent, Langley, Maple Ridge, Matsqui, Mission, Peachland, Penticton, Pitt Meadows, Spallumcheen, Sumas, Summerland and Surrey.

Change in classification may be made by the Local Government Board, which is also given power to form a fifth class, composed of an area formed as a municipality with no other power than the power to carry on a specified work within the municipal area, such area to be co-extensive only with the benefit of the works, such works to consist of irrigation, draining or dyking. The area in these fifth-class municipalities may, for all other purposes, be included within the area of another municipality or partly within and partly without. A municipality of the fifth class may be incorporated for the sole purpose of police and fire protection or lighting or water service, so that a particular area which may be called a village area inside a rural municipality may have corporation conveniences at its own expense without at all interfering with the general obligations of the rural municipality or the distribution of the general taxes thereof. In such cases provision would be made that the lands should be assessed, not at their actual value as part of the village property, but at their value as if they were lands of the highest class of agricultural lands in the rural municipalities surrounding, and of which they form a part.

Under the recommendations covering municipal elections a change in the present procedure is suggested in regard to the preparation of the voters' list, the list to be compiled from the receipt book of the corporation without regard to the assessment roll, every person paying $5 or over on account of a tax levied being entitled to have his or her name placed on the list without further action on his or her part. The list for the purpose of creating a debt upon the municipality to be, as at present, made up of owners of real property. The change would mean that, while the land, which is the chief asset of the municipality, may not be burdened without the consent of the owners, whether these owners are delinquent in their taxes or not, those owners of land who have not paid something on account of their taxes during the year would be debarred from the election of the incoming council, and it would eliminate the clerical work attendant upon the taking of declarations by license-holders and householders.

An important part of the report is that referring to corporation jurisdiction and authority. An entirely new system is suggested. The present system is to give specific powers to the municipalities to legislate on specific lines only. It is recommended that subject to such restrictions as the act itself may contain, the broad, general power of legislation for the peace, order and good government of the municipality shall be transferred to the municipality.

Assessments and Taxes.

Under the head of finance some important recommendations are made. In municipalities of the first, second and third class a fixed Court of Revision, entirely separate and independent of the council, will be appointed for five years at a remuneration to be fixed by the council, to be specified in the appointment, and an appeal from the decision of that body will lie to the Local Government Board, the decision of which will be final except on matters of law, on which an appeal shall lie to the Appeal Court. The municipality may carry on on the basis of the Court of Revision's decision subject to such refunding or other procedure as the Local Government Board may order. The Court of Revision will sit on December 1st in each year, and complete its labors by February 1st. The preparation of estimates of receipts and expenditures in municipalities of the first and second class by December 20th is made obligatory, and they must be published before nominations for the next council, and, when once finally passed, no council, except in a case of an emergency, shall authorize any expenditures not included in the estimates.

A compulsory annual tax sale on September 30th of each year is recommended.

More Sources of Revenue.

The report favors granting to municipalities the personal property tax, income, poll, poll-tax, amusement tax and motor taxes. It points out that British Columbia is the only province of the Dominion in which the municipality has practically nothing to tax in relief of the land tax. Comparisons with other provinces are made showing that, while in British Columbia a municipality has but the real property tax, the road tax and license fees, the other provinces' taxes, which here are solely collected by the province, are there available to the municipalities. The report sets forth:—

"This form of taxation has been the subject of very careful thought, and the undersigned addressed a memorandum on the whole subject to the honorable the minister of finance very recently, to which the minister of finance has not yet been able to give a reply or any instructions as to what taxation in relief of the land taxation of municipalities will be allowed to be put in the new act. Nothing can be done with this large and important section of the act until instructions have been given. It is impossible, in my opinion, to put the case for some substantial widening of the taxing power of the municipality too strongly, but any one of a

dozen courses are open to the minister in applying a remedy."

Regarding municipal debts, the report does not propose to change the existing method of contracting debts nor alter the borrowing powers. The control which the ratepayers exercise over borrowing powers and the limits of those borrowing powers are left unchanged, while the provisions of the present act regulating issue of debentures, stock, serial bonds, instalment bonds, etc., are left the same.

Tampering with sinking funds is strongly condemned by the report, which says: "We are of the opinion that, when the municipality borrows money on a by-law which provides for sinking funds being collected year by year, when the municipal credit is pledged to foreign bondholders, that any tampering with the sinking funds, whether by way of utilizing them for current revenue, or by the non-investment of them, or by way of holding them as against arrears of taxation, is a distinctly immoral procedure, and one which should not be allowed to continue."

Misuse of such sinking funds, the report suggests, should be punishable by fine upon the officers and parties responsible, including the auditor who passes, and also by disqualification from holding office on the part of the councillors who authorize it. In the matter of investment of sinking funds, the report suggests that the funds should be turned over to the Local Government Board at the same rate of interest which the provincial government pays for money, a principle that has been urged by the Union of Municipalities for some years.

Local Improvements.

There are a great many important recommendations in the report dealing with expropriations and compensation therefor, control of highways and traffic thereon, etc., the Local Government Board exercising powers where appeals in regard thereto are made. It is proposed to discard entirely the present "Local Improvement Act" as being unworkable in this province and to adopt in lieu thereof something more nearly approximating the "Private Streets Act" of England. In regard to local improvements, a feature of the recommendations is the added protection given to the minority owners interested in any proposed scheme of improvement.

Police Control.

The report recommends that police boards be abolished and their duties filled by the municipal councils, and more control be given to the attorney-general over what is done in the municipalities in the administration of justice. The system of county crown attorneys as it exists in Ontario is advocated. All police court prosecutions would be handled by such an officer, who would be under the direct control of the attorney-general and not of the municipality. It is also proposed that the Local Government Board should have power to fix a minimum and maximum number of policemen in any municipality, and subject to this, that the whole management of the force and the administration of justice should be in the hands of the municipal council.

Forms of Government.

With regard to the form of municipal government, the report suggests that in municipalities of the first, second and third class the municipal council shall be elected for a term of two years, one-half of the council retiring annually; in municipalities of the fourth class, the mayor and council to be elected annually as at present; in municipalities of the fifth class, the reeve and councillors to be a limited number and elected for a longer period of time, not less than three years, and all to seek re-election at once.

But for municipalities of the first class two alternative forms of government are suggested. One, the board of control form of government, substantially as it is in the present act; and, second, the commission form of government, substantially as it is in force in the Lethbridge charter granted by the province of Alberta to the town of Lethbridge. Neither of these two forms of government to be put into force, however, without the consent of at least 60 per cent of the ratepayers of the municipality affected, nor without the consent and approval of the Local Government Board.

The above recommendations have been printed by the King's Printer, and copies have been forwarded to each municipality with the request that they be fully considered and any recommendations thereon be submitted at the forthcoming annual convention of the British Columbia Union of Municipalities.

RIGHTS OF MINING ENGINEERS SUSTAINED

A recent decision of Magistrate Atkinson in an Ontario court upholds the right of a mining engineer to conduct surveying operations underground within the proper boundaries. About a month ago Mr. M. P. MacDonald, a mining engineer of Cobalt, was summoned into a Cobalt court charged with infraction of the Ontario Land Surveyor's Act. As underground surveying is a part of the training of a mining engineeer, it has been held that work of this kind is quite legitimate.

CANADIAN LIFE OFFICERS

The officers of the Life Underwriters' Association of Canada for the year 1918-19, elected at the recent convention in New York, are:—Hon. president, J. T. Wilson, (Canada Life, Halifax); president, P. A. Wintemute, (Manufacturers' Life, Calgary).

Vice-presidents (representing the provinces):—British Columbia, F. McGregor; Alberta, Mr. Redding, (Edmonton); Saskatchewan, W. B. Crawley, (Great-West Life, Saskatoon); Manitoba, J. E. Matthews; Ontario, G. L. Goodrow; Quebec, V. Lemieux, (Imperial Life, Quebec); New Brunswick, G. W. Merritt; Nova Scotia, Mr. Archibald, (Sydney); Prince Edward Island, H. O. Hyndman.

P. A. WINTEMUTE,

President, Life Underwriters' Association of Canada.

General secretary and treasurer, C. A. Butler, (Great-West Life, Montreal).

The new president, Mr. Wintemute, is manager of the Manufacturers' Life Insurance Company's southern Alberta branch, with office in Calgary. Since joining this company in 1906 as a local agent and a beginner at insurance work, he has progressed rapidly and is now one of the most successful writers in Canada.

Harvesting is in full swing throughout the west, and, although the wheat is not as heavy a crop as was hoped, still it is better than was previously thought possible in view of the drought in the early summer and the midsummer frosts. "Wheat cutting is in full swing," reported Mr. J. D. McGregor, of the Canada Food Board, "and the crop outlook in the central part of Manitoba gives promise of a considerably greater yield than has been expected. The rains during the filling season not only increased the yield of wheat, but improved the quality of grain. There has been sufficient labor so far, but more men are needed from now on." It is estimated that about 5,000 men are needed in Manitoba and about 10,000 in Saskatchewan.

Would You Entrust Your Affairs to a Friend's Management?

The best friend you possess could hardly be expected to have the experience or the spare time necessary to run your affairs advantageously. However, that is what you would be expecting if you appointed a friend as your Executor. Individuals make bad investments, go away, tire out, get sick, often die, with the Estate still unsettled. A Corporate Executor, such as this, never dies, is always accessible, furnishes information and financial statements as to condition of affairs at any time, and has experienced experts to guide in the handling of every phase of the estate's interests. The costs are no more, often less, than those of an individual executor. Write for full particulars. Booklet, "Making Your Will," mailed on request.

			$33,395,253	$40,082,914

Copper in matte was valued at 20 cents and nickel at 25 cents per pound in 1917. For 1918 the values have been placed at 20 and 30 cents per pound, respectively.

Gold.

Considering the handicaps under which gold miners are operating, a small increase in production, as compared with the first half of 1917, is a creditable showing. In the Porcupine camp the Dome, Porcupine Crown, Porcupine V.N.T. and Schumacher have ceased milling operations. The Croesus in Munro township, the Tough-Oakes at Kirkland Lake and St. Anthony at Sturgeon Lake are in the same category. This curtailment of output is offset by the new producers of gold, Lake Shore at Kirkland Lake and Davidson at Porcupine. The 40-ton mill of the Patricia Syndicate at Boston Creek started operating the latter part of June. A promising vein carrying gold telluride has been discovered on the Miller Independence at Boston Creek. Shaft-sinking is proceeding and arrangements made to increase the milling capacity at this property. Considerable activity at Boston Creek has resulted from these developments. In the new Matachewan camp, from the claims under option to the Nipissing Mining Company, some spectacular samples of gold ore have been secured. Diamond drilling on the Otisse claims is said to be producing satisfactory results. During the period the Porcupine camp produced 207,731 ounces of gold and Kirkland Lake 17,027. A total of 515,094 tons of ore were milled with a recovery in gold and silver valued at $4,692,529

Silver.

Although shipments for the first half of 1918 were lower by 1,367,785 ounces than for the corresponding period of 1917, the value was $683,185 greater, the average price of silver per ounce for the two periods being 92.8 as against 75.4 cents. Companies shipping over one-half million ounces are given in order: Nipissing, Mining Corporation, Kerr Lake, O'Brien, Buffalo, Coniagas and Temiskaming. New shippers this year include Edwards and Wright, Limited, operating the old Green-Meehan mine; the Silver Eagle, of Silver Centre; the Keeley mine in South Lorrain, where a high grade vein has been uncovered. There was also a clean-up by the Lumsden Mining Company. The National Mines, Limited, recovered and treated tailings from Cross Lake that had been deposited there by the old King Edward and Silver Cliff mines. The Mining Corporation of Canada is now treating a large tonnage of slimes and tailings from Cobalt Lake in the new mill. Silver was recovered from gold ores to the extent of 47,427 ounces.

Refineries.—There were treated at Deloro, Thorold and Welland 2,659 tons of ore and concentrates and 1,116 tons of residues, with a recovery of 2,753,701 ounces of silver. In addition, cobalt and nickel were produced in metallic form, also as oxides and sulphates. The Deloro Smelting and Refining Company uses a considerable proportion of its output of metallic cobalt in the manufacture of "stellite," which contains about 55 per cent. of cobalt.

Copper and Nickel.

As a result of high mining costs, together with increased freight rates and smelter charges, copper mining has become unprofitable. The only shipper was the Hudson Copper Company at Havilah. Nickel-copper mining and smelting, however, shows an increase in output. The Canadian Copper Company is no longer known by that name, having been absorbed by the International Nickel Company, of Canada, Limited, as of August 1st. The new refinery of the company, located at Port Colborne, began operations in July. From the Creighton mine ore is being raised at the rate of over 100,000 tons per month. During the half-year 804,640 tons of ore were raised from the operating nickel-copper mines. Ore smelted was 717,119 tons, producing 40,178 tons of nickel-copper matte.

Iron Ore and Pig Iron.

During the half-year shipments were made by the Algoma Steel Corporation from the Helen and Magpie mines and by Moose Mountain, Limited, as heretofore. There was also a production of hematite by the Canadian Union Iron Mines Corporation, Limited, from the township of Drummond, twelve miles from Perth. This mine has been lying idle for about thirty-five years. Another iron mine in Palmerston township, eastern Ontario, known as the Ferguson, is now being operated by the Poe Mining Company. The Helen mine was shut down in April, all merchantable hematite having been mined out. Development work is proceeding on an adjacent property. Of a total of 106,196 tons of ore marketed, 75,497 tons went to Ontario furnaces and the balance to the United States, with the exception of a 42-ton shipment to Montreal.

Pig iron produced in the half-year shows little change in quantity as compared with the corresponding period in 1917, but in value the increase is over 50 per cent. There were 75,716 tons of Ontario ore and 601,751 tons of foreign ore smelted by the eight furnaces in blast. Steel produced in the period totalled 432,326 tons, worth $13,739,602.

Molybdenum.

The production of molybdenite concentrates for the half-year shows a small decline in quantity, but the value was nearly as great as in 1917. Concentrators were operated by the Mines Branch, Ottawa, and by the Renfrew Molybdenum Mines, Limited, at Mount St. Patrick. The International Molybdenum Mines, Limited, at Orillia and the Tivani Electric Steel Company at Belleville marketed 19,410 pounds of ferro-molybdenum, valued at $59,153.

Lead.

There was only one producer of lead ore in the province during the half-year, the James Robertson Estate. Operations, both mining and smelting, are carried on at Galetta. The pig lead product is used by the company in Montreal.

NEWFOUNDLAND PROSPEROUS

That the Reid-Newfoundland Company had taken the lead in the erection of a large cold storage plant in St. John's, Newfoundland, with a present capacity of 12,000,000 pounds of fish, and that it was the intention to increase that capacity to 50,000,000 pounds, making one of the finest in the world, is the statement of Sir Patrick N. McGrath, chairman of the Food Control Board of Newfoundland. The British government had contracted for practically the entire output of this plant until the end of the war.

The island was never so prosperous. High prices were being obtained for fish, and shipbuilding was being prosecuted, vessels of 500 tons having been launched from some yards. It was hoped that the colony would be able to construct enough bottoms to carry its entire fish products; also coal mining was coming in for attention, and it looked as though sufficient coal could be produced to supply at least the home demand and retain about $2,500,000 annually within the island, which is now being sent out for coal.

CANADA TO HAVE RESEARCH FACILITIES

First Annual Report of Council Makes Comprehensive Recommendations—An Essential Part of Canada's Future

The first annual report of Dr. A. B. Macallum, administrative chairman of the Advisory Council for Scientific and Industrial Research, has just been issued in printed form. It contains some valuable information to industrial Canada, and tells in illuminative manner of the little heralded but vitally important work of the council. That work, undertaken by Canada in the autumn of 1916, is in brief, as recited in the order-in-council constituting the advisory council, the making of "a scientific study of our common unused resources, the waste and by-products of our farms, forests, fisheries and industries, with a view to their utilization in new subsidiary processes of manufacture, thus adding to the wealth and employment of our people."

What Has Been Done so Far.

What the council has already accomplished, and the problems it is now at work upon, are summarized by Dr. Macallum in his report. As to what has already been accomplished, the report covers a score or so of subjects of assisted research, all connected with practical problems of industrial interest and importance. Apart from the work of the council in connection with the development of the very large and hitherto unexploited lignite deposits in Western Canada, to which publicity has already been given, the special problems investigated with good practical results may be briefly enumerated.

A special study was made of the commercial use of tar, e.g., as applied to plants in Canada engaged in the distillation of coal, wood, the liquid products resulting from the manufacture of producer gas, etc.

A new process has been found which will be utilized by several distillation plants in Canada in the near future.

An investigation was made into the commercial feasibility of utilizing for heat and light on the farms of the prairie provinces the enormous quantities of straw, estimated at twenty million tons, now annually burned. It is expected as the result of experiments now being conducted that retorts and distilling apparatus of very simple design and automatic in operation can be supplied to the farmers at a cost of about five hundred dollars each, with the full equipment necessary for heating and lighting their buildings from waste straw.

The results of fog signaling experiments undertaken at the instance of the council forecast a new type of science for use in the River St. Lawrence and the Gulf, thus making an important contribution to the safety of St. Lawrence navigation.

Studies and experiments on the composition of sulphite liquor waste in Canadian pulp mills, enormous in quantity and destructive of fish life in streams, have given results which point the way to the commercial utilization of at least the sugar it contains to furnish alcohol for industrial purposes.

Experiments are also being conducted in regard to the production of a rust-resisting wheat, the necessity for which is seen from the fact that annually more than twenty million dollars worth is lost through rusted grain in the prairie provinces.

What Lies Ahead of Council.

These are but some of the problems which the Council has been working on for the past year. The brief mention of all the subjects on which it has been asked to make special inquiry covers two full pages of the report and includes some seventy problems of applied science.

In regard to the utilization of the undeveloped lignite deposits in the prairie provinces an illuminative chapter is given in the report. Largely as a result of the work of the Council the first briquetting plant is now being erected near Estevan under a joint arrangement of the federal government and the provincial governments of Manitoba and Saskatchewan. Owing to the delay in adopting the recommendations of the Council as made last year, the plant will not be producing until next year, but there is every reason to believe, as the report says, that it will blaze the path to the utilization not only of the fifty-seven billions of tons of lignites of Saskatchewan, but also of the vastly greater quantity of the better grades of this fuel in Alberta."

The report further notes in this connection that the success of the initial plant "will induce private capital" to go into this enterprise, and eventually several plants may be erected which will supply the half a million tons that will be required to replace the anthracite hitherto imported into Manitoba and Saskatchewan from Pennsylvania, thus retaining in the country about five million dollars now annually spent abroad for the supply of this fuel.

Canada Sadly Behind.

Steps have been taken by the council to determine the equipment and man-power for research in Canada, now sadly deficient as compared with other countries, and to create permanent organizations for research by industrial groups, by the aid of which Canadian industries may be assisted to develop, by the application to that end of the most advanced scientific processes, and thereby enabled not only to meet the needs of the home market, but also to compete with their rivals abroad. In this connection Dr. Macallum says:—

"This question is one of paramount importance to Canada in view of the intensified application of science to industry which elsewhere will be fostered after the war by the state and also through private enterprise. It has been ascertained that not two per cent. of Canadian industrial concerns have research laboratories, and only about ten per cent. have routine laboratories, chiefly for the elementary testing of materials.

"The provision for research, either in pure science or in science applied to industry, has been and is utterly inadequate to our needs, and unless vigorous action be taken, and soon, to reorganize our industries on scientific lines wherever possible, Canada will face a very serious industrial crisis in the years following the war. The annual budget of the Massachusetts Institute of Technology exceeds the total of the annual expenditure of all the Faculties of Applied Science in Canada."

Research Institute Recommended.

He recommends the establishment at Ottawa or some other centre of a Research Institute, having the function of the Bureau of Standards at Washington, or of the National Physical Laboratory of Great Britain. Attached to the institute, it is suggested, should be laboratories that may be at the disposal of guilds or associations for research which may be founded by the various Canadian industries, each in its own line, the firms or companies which are unable individually to undertake experimental investigation with the object of improving their manufacturing processes.

The report goes at some length into the detail of establishing such an institute and the formation of trade guilds for research into common problems. It may be noted in this connection that splendid results have already been achieved in England since the war began through government-assisted industrial research. The British parliament has voted one million pounds sterling for a five-year budget for this purpose. In Canada the parliamentary appropriation to assist the work of the council for scientific and industrial research is comparatively absurdly small.

Would be Powerful Stimulus.

In Dr. Macallum's summing up of the argument for the creation of a Central Research Institute, he says: "The work of the proposed institute would powerfully aid the development of scientific industrial research in Canada by stimulating the Canadian universities to increase their resources and facilities for research and thereby to direct into the ranks of science the ablest of their young graduates desirous of qualifying for a career, whether in pure science or in science applied to Canadian industry. It would place at the service of Canadian industry a factor which would insure its success in the strenuous international trade competition which is near at hand. It would, above all, enable the nation to direct its energy toward the economic and right utilization of its untouched stores of national wealth, in order that it may bear, with some degree of ease, in this and the next generation, the almost Atlantean financial burden it is assuming as a result of its playing its part in the present world struggle."

In some quarters it has been suggested that Canadians be put on rations and not on their honor regarding food.

ALBERTA MINES UNDER WAY

The coal mines in the Camrose district are getting into shape to make large shipments this fall. The Stony Creek Collieries, located within the town, is at present mining 40 tons a day and will be ready to deliver 75 tons by the time the cold weather arrives.

Mr. Walters has opened a new mine seven miles due north of Camrose, and has had the Grand Trunk Pacific put in a spur to the mine in connection with the Spicer mine, which adjoins the Walters property. These mines will have an output of at least 200 tons a day by the first of next month.

It is reported that the Smith mine, five miles south-east of Camrose, is being opened up, and, as there is a very good quality of coal, with a depth of about five feet, the output from this mine should help materially in solving the coal situation this winter.

The Round Hill Collieries, owned by Camrose men, is the largest mine in the district, and has averaged during the past few winters one hundred and fifty tons a day. The company has just completed uncovering over two acres of coal at an expense of nearly $20,000, and have about twenty thousand tons which can be loosened and loaded into cars at much less expense than the old method of tunnelling.

The best grade of coal is being delivered in Camrose at the present time at $5 per ton, whereas in previous years the local mined coal in the cellars cost only $3.50.

When the gas well was drilled in Camrose several years ago coal was struck at 150 feet in paying quantities, and at 400 feet what is known as the Big Saskatchewan seam was encountered.

The New South Wales wool crop for the present year has amounted to 739,472 bales as compared with 705,676 bales during the previous season. Moreover, at the request of the British government the bales were more condensed than last year, and the increase in the crop, therefore, is probably greater than that indicated by the above figures.

MUNICIPAL BOND MARKET

The Monetary Times Weekly Register of Municipal Activities and Financing

At a recent meeting of the Bond Dealers' Association of Canada an agreement was made not to purchase any more new issues until the 1918 Victory loan has been floated. Dealers may, however, sell any bonds which they have on hand. As a matter of fact, practically all bond dealers in Canada are now engaged in the preliminary work of the loan campaign and they are not in a position to solicit new business. There will, therefore, be practically no more issues of municipal bonds until the war loan campaign is completed.

Kingston, Ont.—Messrs. Brent, Noxon and Company, of Toronto, have purchased a block of $[illegible],500 6 per cent. 20-instalment debentures.

Unionville, Ont.—The property owners passed a by-law for the installation of Hydro-Electric service. Debentures will be issued to the amount of $10,000 to cover the cost.

York Township, Ont.—The council at a recent meeting instructed that application be made to the Railway Board for permission to issue 6½ per cent. debentures on $74,000 for water service on streets.

Barton, Ont.—The township council, at a meeting recently, decided that the Hydro-Electric system should be installed at once, and for this purpose a by-law was passed authorizing the issue of $55,000 debentures.

Simcoe, Ont.—A block of school debentures amounting to $4[illegible],000, and bearing interest at the rate of 6 and 6½ per cent., has been sold by the town council to local brokers. The proceeds have been turned over to the school board with the exception of $4,900, which will be used for other purposes.

London, Ont.—City of London bonds, bearing interest at six per cent. and payable twice a year, are being sold over the counter in the office of City Treasurer Bell. Already $[illegible]75,000 worth of the bonds have been sold. On October 1st a new issue will be placed before the public and so keen are Londoners to invest that $4[illegible],000 worth of these are already spoken for.

Brantford, Ont.—Decision to approach the city council with a request that a by-law to raise the sum of $75,000 for a new school be submitted to the ratepayers at the next municipal election, was the most important step taken by the Board of Education at a meeting held on September 12th, the first since the summer recess. The conditions of congestion existing in many parts of the city, but particularly in Ward 5, were shown to be intolerable, and the only remedy was seen to be the erection of a new school. The buildings and grounds committee were authorized to secure an option on suitable property somewhere in Ward 5.

West Vancouver, B.C.—The cash statement for August submitted to the council on September 9th, showed that $2,[illegible] had been collected for taxes; water rates, $529.56; dog tax, $[illegible]; tax sale redemption, $7[illegible]; sundry, $17.57; ferries, $2,[illegible]. The receipts for the year were $9[illegible]. The receipts for 1917 were $90,6[illegible]4.51.

Accounts as follows were ordered paid: board of works, $[illegible]; transportation, $1,120.21 and water works, $[illegible]4.50.

For the purpose of raising funds for the extension of the water system, Chairman of Finance, Councillor Proctor was [illegible] water bonds in the hands of the council.

SASKATCHEWAN CO-OPERATIVE ELEVATORS

Elevators of the Saskatchewan Co-operative Elevator Company are now opening for the fall season. New grain has been received at a number of points and business will soon be in full swing. The company this year has [illegible] country elevators, this being a considerable increase over the number owned in the [illegible] year.

During the closed season a staff of men has been employed making necessary repairs to elevators, and, as far as possible, putting them in perfect shape to handle this season's crop. All the elevators of this season's programme are now complete. There are now over [illegible] grain elevators in Saskatchewan, of which the Saskatchewan Co-operative [illegible] Company owns one-sixth.

AGRICULTURAL PRODUCE IN ONTARIO

August Forecast of Production for 1918 — Most Grains Above Average But Hay and Clover Falls Short

The following statistics of the principal field crops of Ontario for 1918 show the acreage as compiled from individual returns made by farmers. The schedules were distributed and collected by the public school teachers and transmitted to the Dominion Bureau of Statistics, and compiled by the Ontario Department of Agriculture. The yields were estimated by a large and experienced staff of correspondents who give probable yields according to conditions on August 15th, 1918.

Fall wheat: 362,616 acres will produce 6,270,706 bushels or 17.3 per acre as against 585,946 acres, 13,384,207 bushels or 22.8 per acre in 1917 and 14,942,050 bushels in 1916. The annual average for the 36 years, 1882-1917, was 21.3.

Spring wheat: 351,423 acres, 8,290,689 bushels or 23.6 per acre as against 182,957 acres, 3,679,516 bushels or 20.1 per acre in 1917 and 2,213,961 bushels in 1916. The annual average, 16.1.

Barley: 660,404 acres, 23,416,798 bushels or 35.5 per acre as against 551,298 acres, 18,387,741 bushels or 33.4 per acre in 1917 and 12,388,969 bushels in 1916. The annual average, 28.1.

Oats: 2,924,468 acres, 124,622,893 bushels or 42.6 per acre as against 2,763,355 acres, 111,232,817 bushels or 40.3 per acre in 1917, and 71,297,528 bushels in 1916. Annual average, 35.8.

Rye: 112,726 acres, 1,824,614 bushels or 16.1 per acre as against 133,077 acres, 2,222,325 bushels or 16.7 per acre in 1917 and 2,354,410 bushels in 1916. Annual average, 16.5.

Peas: 113,862 acres, 2,397,263 bushels or 21.1 per acre as against 90,322 acres, 1,512,567 bushels or 16.7 per acre in 1917 and 1,243,979 bushels in 1916. Annual average, 19.1.

Beans: 100,082 acres, 1,469,799 bushels or 14.7 per acre as against 110,680 acres, 1,078,510 bushels or 9.7 per acre in 1917 and 583,105 bushels in 1916. Annual average, 16.3.

Hay and clover (not including alfalfa): 3,470,036 acres, 4,5[illegible],[illegible]59 tons or 1.32 per acre, as against 3,358,579 acres, 6,156,340 tons or 1.[illegible] per acre in 1917 and 6,739,259 tons in 1916. Annual average, 1.47.

The acreages in other crops for which no estimates as to yield have been made at this date, are as follows:—Buckwheat, 223,662 as against 153,457 in 1917; flax, 15,925 against 7,372; mixed grains, 619,389 against 515,593; corn for husking, 195,31[illegible] against 258,935; fodder corn, 380,946 against 511,729; alfalfa, 144,010 against 189,100; cleared pasture, $3,561,754 against 3,599,045; potatoes, 166,203 against 146,481; turnips, 85,449 against 93,034; mangels, 40,714 against 49,148; other roots, 32,858 against 24,939; summer fallows, 248,4[illegible] against 232,670; orchard, 265,678 against 280,326; small fruits, 24,506 against 21,964.

GRAND FORKS MINING ACTIVITY

"There is a tremendous revival of mining activity in the Grand Forks district," stated Mr. J. F. Thompson, M.P.P. for Phoenix, B.C., recently, "and some important discoveries have been made of late. Valuable deposits of fluorspar, very valuable in the electrolytic process of mining, have been unearthed, and the recovery of this mineral is proceeding on a large scale. Locations have been made on the North Fork of the Kettle River, and so promising are these that the Kettle Valley line is to be extended to provide transportation."

Particularly important, stated the Phoenix member, was the recovery of platinum in the Franklin camp. As much as a half ounce to the ton—worth over $5[illegible]—was being secured. Chrome ore was being found in considerable quantities and a great many prospectors were searching for new deposits. A Seattle and a Spokane company were said to be shipping this mineral to Pennsylvania at present, it being very valuable in the tempering of steel.

Speaking of the crops in his district, Mr. Thompson said that they were of record proportions, and probably the best grain crops in the province this year were in the southern interior. Agricultural development was most satisfactory and every encouragement was being given the farmers.

GROWTH OF MUNICIPAL ASSESSMENT

An Address Before the Ontario Municipal Association Convention at Toronto, August 28th, 29th and 30th

BY J. C. FORMAN,
Assessment Commissioner, Toronto.

(Concluded from last week.)

Prior to the operation of the present act, which came into force January 1st, 1905, grave and general dissatisfaction existed with the personal property tax. The mercantile community opposed it, particularly the manufacturer and wholesale and retail merchants, on the ground that it was unfair, inquisitorial, inequitable and unjust. As the result of the general clamor for a change, the Ontario government appointed a commission on September 10th, 1900, "to enquire into and report upon the law in force relating to the different classes of property for the purposes of municipal taxation." Statistics were obtained from 72 municipalities in Ontario, and, after much deliberation, the "business assessment" was brought forth. The effect of this change meant that the amount of the business assessment was representative of the amount of capital required to carry on such business or, in other words, the amount of such assessment was estimated generally to be or equivalent to the total amount of personal property formerly assessable. As a matter of fact, the business assessment for 1906 totalled $19,224,628, as against the personal property for 1905 of $12,386,713.

There have been attacks made against the system of business assessment, the chief argument being that it is inequitable. There is force in this, but, as it seems to me, this is not a sufficient reason why the assessment now levied against businesses should be abandoned, particularly where a remedy is at hand and where such inequalities may be largely removed. It would be a serious matter to the municipality if the business assessment were removed from the act and no substitute given. In 15 municipalities, the loss in assessment would amount to over $95,000,000, of which Toronto would lose over $63,000,000. Then again, it must be borne in mind that this method of assessment is in accordance with the wishes of those who heretofore have strenuously objected to personal property being assessed.

There is much in favor of business assessment from the municipal standpoint. It is easy of application. It is not now the duty of the assessor to question the party assessable as to the amount of capital he has employed in his business or any like question, and no one carrying on business escapes taxation, and, thus, all contribute more or less to the burden of taxation.

In order to more equitably assess all those carrying on business, it is proposed that the shareholders in incorporated mercantile and manufacturing companies shall be assessed on the dividends received by them and which are now exempt under sub-section 8 of section 10.

In clause (f), every person carrying on business as a barrister, solicitor, physician, surgeon, dentist, engineer, surveyor, etc., are assessable, first on a business assessment and second on the income exceeding the business assessment.

In the case of banks, insurance, loan and land companies, street railway, gas, telephone and electric light companies, all are liable to a business assessment directly against such company and the dividends received against the beneficial shareholder as income, wherever such person may reside.

It would seem, therefore, that it would be only reasonable and that no injustice would be done in assessing the income or dividend derived from shares of incorporated companies, being mercantile or manufacturing.

An assessment against the shareholder who is in receipt of income from any of the companies named, as compared with the assessment on income derived from personal earnings, is entirely favorable to the shareholder, inasmuch as the capital of the shareholder is not involved, while income from personal earnings ceases on the death or inability of the party to earn such income.

The second proposition is that where a business is carried on by a person or partnership, there shall be levied, first, the business assessment, and, second, the income derived from such business over and above the amount of business assessment and also the statutory exemption on income to be allowed to the person or members of the firm. Such income would be the net income or profits derived from the business.

It will be seen that the result of the above proposed amendments, if granted, will remove an objection raised against the business assessment—viz., that the earning power of certain businesses is much in excess of other lines of business, while the business assessment in both cases varies little, if any.

Clause (f) of section 10, above referred to, should be widened in its scope and include all those not engaged in retail, wholesale or manufacturing businesses, for instance, resident contractors, advertising sign painters, etc., not being in such case incorporated companies.

It has also been brought forward that contractors residing outside of Ontario, who have been and are engaged in large contracts and who are not now liable to assessment, except in the slightest degree, and that is a business assessment levied on the premises occupied by them, generally for office purposes. It is difficult to reach them by the assessor and it may be necessary to employ a license fee. These contractors are only temporarily with us, but are in competition with our contractors and builders.

The same remarks apply to transient traders, who take advantage of the holiday and other seasons of the year and who escape taxation, although in competition for the time being with our merchants who contribute so largely to the expenses of the municipality.

Exemptions.

In several of the American States, the basis of exemption, as provided by the constitution, is as follows:—

"No man or set of men entitled to exclusive separate public emoluments or privileges, but in consideration of public services." The general provision of the legislatures throughout the American States provides for a uniform and equal rate of assessment and taxation. It is generally agreed by authorities that perfect equality of taxation is unattainable and, while this must be admitted, yet there appear cases which, on their face, are manifestly unequal. It therefore, appears to me that, in the exemption of private seminaries of learning, such cases are properly assessable, inasmuch as they do not appear to grant public services.

There may be reasons advanced why such institutions should be exempt. Reasons given in the past have been that to tax such seminaries of learning would result in the closing of such schools and thus extra burdens placed on the general taxpayer by reason of the municipalities having to provide additional school accommodation. It was also argued that these schools, wherever located in the province, were the means of bringing a no small addition to the population with a considerable purchasing power, which inured to the benefit of the municipality.

My feeling is that the education now provided by the people is all that the general taxpayer should be called upon to pay for. The exemption of private seminaries of learning for the year 1918 in this municipality amounts to $2,576,489, and is ever increasing. Certain of them are able to purchase valuable properties from time to time, in order to meet the ever-growing number of pupils. One of them is shown as having real property exempt to an amount of $233,648, another $196,196.

Those who can afford to send their children to these schools can also afford to pay a slight increase in the tuition fees and which will provide the taxes properly payable by them, unless it can be proved that they are entitled to exclusive public emoluments.

In sub-section 15: "The full pay of any officer, non-commissioned officer or private of his Majesty's Regular Army or Navy or any pension, salary, gratuity or stipend derived by any person from his Majesty's Imperial treasury and the income of any person in such naval or military service on full pay, or otherwise in actual service." This sub-section has been construed to include the private income of such persons. This, as it would appear, should only apply to the income derived from the services for which he has engaged.

There are other suggested amendments to the act, but which will have to be submitted later.

Before closing, I wish to say that there does not appear to be any desire on the part of the general taxpayers for any drastic reform of the present system of taxation. Our assessment act was and is the result of special and well considered thought and experience on the part of the Ontario Government Commission and the special committee on taxation appointed by the government. It has been in force for a period of 13 years and comparatively few amendments have been made.

E. B. McDERMID,
Managing Director

It is only lately, by reason of the increased wants of the municipality, that special efforts are being made and suggested changes in the act, by which additional revenue may be raised, and there should be no reasonable objections to these proposed changes if the same can be shown to be fair and reasonable.

In the above remarks, I am not forgetting the claim of those who contend and insist that the act should be so amended that the improvements on land should be assessed at a lower percentage of value than land.

Single Tax Not a Success.

In my report to the city council, November 21st, 1912, on this subject, I was obliged, after due consideration, to report against the proposition. I quote therefrom in part as follows:—

"Why should such improvements be exempt from taxation? These very buildings, whether residential or otherwise, are responsible (largely) for the present rate of taxation, rendering necessary as they do fire and police protection, schools, and, in fact, all civic services. If taxes are removed from improvements, the municipality will be waiving a large share of its income or, at least, will be in a very uncertain position as to its actual revenue from taxation. With land overtaxed, the city will become, in times of depression, possessed of an asset but not producing revenue.

"It seems to me further that to exempt buildings (and improvements) from taxation is, in a measure, to drop the substance for the shadow and from past experience it would seem to me wiser to hold what we have than to experiment with an academic question which has not been tried out. Cities which now exempt improvements can only prove the wisdom of such system after a trial of prosperity and a period of depression and until then it does not appear advisable to make any change in the present method of assessing land and improvements."

These statements were made six years ago. Vancouver, a city of 123,900, as per census of 1911, was heralded by single tax associations both here and in the United States as a shining example of the benefits derived by the municipality, through great building operations because of the total exemptions of improvements on land. The improvements were eliminated from taxation in 1910, although the value of the improvements were shown by the assessor to be $53,515,295 and land $138,557,595.

Now take Edmonton, a city as per civic census in 1912, whose population was returned at 53,611. In this city, the revenue from general taxation was based entirely upon land values and from many enquiries made by me, the concensus of opinion was largely in favor of the single tax.

This was also another city upon which many founded their arguments that the single tax was entirely successful largely because of building operations claimed to be due to the single tax system. Why is Vancouver this year assessing 25 per cent. of the value of improvements? Why is Edmonton this year, under the amendments to its charter, assessing 60 per cent. of the improvements and, likewise, an income and a business tax? The answer, so far as Edmonton is concerned, is shown in the following figures:—

The net assessment for Edmonton for the year 1914 (its highest point) was $191,283,970. Rate 17 5/12 mills on the dollar. For 1917, the net assessment was $100,917,090, or a reduction of over $90,300,000. The rate 26 5/10 mills on the dollar. Just for a moment let us see what the application of single tax means to this city. The assessment of this city for 1918 is as follows:—

Land	$290,262,815
Buildings and improvements	224,187,712
Business assessment	63,253,254
Income	25,235,458
Total	$602,939,239
At 30¼ mills on the dollar	$ 18,341,277

If land only were taxed, it would require a tax rate of 63 2/10 mills on the dollar to produce the same result in taxes. It will be said that the reduction on the improvements will be gradual to commence with, say by 25 per cent., but the final result must be met (while homeopathic doses are being yearly administered), and it is the result that the municipalities are concerned with. In the meantime, the population and the resultant expenses of civic administration are annually increasing, and which are to be met with by a lesser revenue due to the exemption of improvements.

ONTARIO FARM CONDITIONS

Harvesting Satisfactory — Root and Tobacco Crops Good—Recent Rain Has Improved Pasture

The following is a summary of recent reports made by agricultural representatives to the Ontario Department of Agriculture:—

The frequent heavy rains early in September have more or less delayed field work, but the well-soaked land, so long hardened by dry weather, has been put in fine condition for fall plowing, while pastures and late crops have been given a new lease of life. The grain crops generally have been cleared off in a most satisfactory way, although here and there portions of a few fields remain out owing to the wet. Meadows were never more in need of rain. Some of the new seeding had died out from the effects of the long drouth. Huron reports a good promise of clover seed.

Potatoes will not be up to the yield expected early in the season, but are on the whole clean and presentable. Roots, especially sugar beets and turnips, are reviving wonderfully, as the rain has gone well into the soil. Bean harvesting has begun, and promises a fair yield, although the recent heavy rains may affect the color. Some corn has been knocked down by the recent wet and windy weather. This crop has had considerable late growth, and the stalks are rather green and sappy, and some anxiety is being expressed as to whether there will be sufficient maturity by the time frost comes. Essex reports some tobacco cut, with tonnage light and prices high. In Norfolk several carloads of fall and early winter apples already have been shipped to the west.

A good deal of plowing is being done or is being arranged for. Some fall wheat has been sown, and now that the rains have put the land in good shape for plowing, a wide acreage should be got in. Lambton particularly reports that farmers there are making every effort to plant as much fall wheat as they can. Brant states that considerable winter rye will be sown in that county. Thrashing is proceeding vigorously, and in many cases field estimates are being exceeded. In the township of Sombra, in Lambton County, several cases are reported of oats yielding 100 bushels an acre. On several 100-acre farms in the same township, some are thrashing from 2,300 to 2,500 bushels of grain.

Cattle and other grazing animals are picking up in condition, with the much improved pastures. Veal calves in Brant bring from 14 cents to 16 cents a pound. The prospects now are that all classes of live stock will go into winter quarters in good fit. Hogs are in steady demand, and in fairly steady supply, at from $18.75 to $19.50 per hundredweight. The present demand for field help is now confined mainly to experienced plowmen, who are hard to find.

FOOD CONTROL AND FOOD RATIONS

Do householders in Canada seek to evade the food regulations? Are the merchants of Canada conniving at the evasion of the food regulations? Let us see about that?

The main objective of the Canada Food Board is to supply Great Britain and the Allies with vital foods. With this in view food regulations are made, which, if respected by the people of Canada, will enable Canada to keep faith with the Allies on food.

Do the people of Canada want to keep faith with the Allies on food? They do. Are the people of Canada keeping faith with the Allies on food? They are.

To take any other position is to suggest that the people of Canada would rather keep their pre-war food habits than keep faith with the Allies on food. No true Canadian is breaking the regulations of the Canada Food Board, for he knows those regulations are made in order that Great Britain and the Allies and the Canadian army at the front may be properly fed. Who of us will eat what should be conserved for the Canadian army at the front?

The hearts of the people of Canada are sound and in this war to a finish. Food is a first-class munition of war, and Canadians so view it. It will be time enough to go in for rations in Canada when the people of Canada refuse to conform to national efforts to conserve food for Great Britain and the Allies and the Canadian army at the front. When that time comes, a policeman, not a food controller, will be needed.

MIXED FARMING IN ALBERTA

Years of Experience Have Taught That This Plan is Safest—Bankers Confident of Province's Future

On August 27th, the Edmonton Board of Trade was addressed by Mr. Frank Pike, manager of the Edmonton branch of the Merchants Bank. Mr. Pike referred especially to the crop damage caused by frost in July. "These western plains," said Mr. Pike, "are the world's great bread and meat basket. They have been proved and tested, and our faith in this country should not be tossed about by every breeze that blows or every frost that freezes. As Sir Thomas Shaughnessy has recently said in speaking of his belief in the future of Canada: "It is not inspired by love of country but by business sentiment." We can give reasons for the faith that is within us.

"Last week I drove through the Clover Bar district and talked to some of its most successful farmers. Mr. R. P. Ottewell has been there for 38 years. He has never before seen a killing frost in July, and has never had a total failure. Three or four times he has been partly damaged by frost and was hailed twice. For 38 years he has averaged from 30 to 35 bushels of wheat per acre. I also talked to Mr. Robert Lindsay, who has been in the Clover Bar district for 20 years and has never had a failure. These two examples clearly go to prove what intelligent farming can do in this country, but I do not need to quote isolated examples. I can show, and so can every bank manager in Edmonton, hundreds of farmers' statements showing steady and substantial progress year by year.

"In the Camrose district Mr. Edmund Thompson has been farming for a quarter of a century and he has never missed a paying crop.

"What these good farmers can accomplish by scientific and commonsense methods applied to their business, others can do also if they follow their example. These men have tested other farming countries, and they all say that this is the best land 'out of doors.' Let those who doubt it sell out and go elsewhere. Two weeks ago at the Camrose fair I met two farmers who had sold out when I was there ten years ago. They had just returned from the Western States where they had been farming, but they could never get away 'from the lure of that great big, broad land way up yonder,' and they were back this time to stay.

"From a grain-growing standpoint, this is undoubtedly an 'off' year in Alberta, and I do not wish to minimize the results of the damage done by frost and drouth, especially at a time when farmers were urged, for patriotic purposes, to produce wheat. No doubt some of them allowed their patriotism to cloud their judgment to a certain degree, and they probably sowed more wheat in this district than they otherwise would have done.

Mixed Farming Best for Alberta.

"Experience has taught that the road to success in this country is mixed or diversified farming. This does not need to be emphasized. We have learned our lesson pretty well, and a crop failure now has not by any means the same disastrous effect that it would have bad a few years ago when farmers' notes nearly all matured on November 1st. If the grain crop were good we had an income in the fall—the rest of the year was a blank. Now we have an income of millions every month from the proceeds of the sale of hogs, cattle, dairy products, etc. Business is sound and good. This is not rosy optimism. It is the plain truth. I am sure, Mr. Chairman, you will agree with me when I say that the bankers view the prospect with nothing but confidence, based on many years of experience. Some of the farmers who would have paid off their liabilities this year from sale of wheat will have to feed their frozen grain, and payment of bank advances, although delayed, will eventually come from sale of fat cattle and hogs, and in the long run I doubt if the farmer will be very much worse off.

"The prosperity of this country, based on its agricultural interests, is built on too solid a foundation for the bankers to be in the least alarmed or their confidence disturbed. I think that I can speak for all of them when I say that our policy is, 'No deserving farmer shall suffer by lack of necessary and reasonable accommodation to enable him to carry on, no feed to be wasted, no unfinished cattle to be marketed, and no economic waste.'

"The first and paramount duty of a bank is to keep its depositors' money liquid and safe, and I know of no safer or cleaner form of investment than promissory notes signed by the farmers of Alberta, when represented by grain or livestock. Losses will be infinitesimal, and the banks by investing their funds in this way will be doing the greatest good to the greatest number.

Banks at Service of Farmers.

"A general manager of one of our large banks has recently said: 'The support and development of the all-important agricultural industry along progressive and legitimate lines shall continue to be at all times a cardinal principle in the bank's general policy. You may be assured, therefore, that to our farmer friends the door of this bank shall be ever on the latch, and in all and in every circumstance a cordial welcome awaits them.' This, I believe, is the policy of all the banks

"After all, the drouth and frost has only affected one year's income, and that, comparatively speaking, in a small degree. The capital represented by the great underlying wealth, created by the steady, silent work of the farmers, is absolutely unimpaired, and will show tangible results in increasing revenues as the years goes by. Unfortunately, there is a class of small farmer or homesteader that the banks cannot help as much as they would like. Their assets are exempt and their financial position hardly warrants unsecured credits; but we have in this country a government whose premier is a farmer, and whose minister of agriculture has been progressive and enthusiastic in the interests of the small farmer. They have not been afraid to step out from the beaten paths. They have formulated a policy and enacted such laws that have bridged the gap, and have helped to place the small farmer in such a position that if he takes advantage of his opportunities he can almost at once place his homestead on a revenue producing basis. I refer, of course, particularly to the 'cow bill,' which is doing so much for the small farmer of this country.

"I have been doing business with the farmers for a number of years, and I would like to take this opportunity of publicly expressing my unbounded admiration for their sterling qualities. It is true that they grumble and complain occasionally and are restive under any apparent oppression, but these are some of the characteristics that have made the British Empire what it is to-day. What I like about them is their dogged persistence and determination in the face of adversity. It is a good thing for us that the farmers are not easily discouraged. If they are hailed or frozen out to-day, in a short time their fields will be plowed for the next year's harvest. With such an example, what right have we business men to lack confidence or faith.

"Just a few words with regard to the future. Eminent financiers and profound thinkers have given their forecast of the conditions that will prevail after the war, and I do not think any two of them have given exactly the same opinion. It is their privilege to differ if they want to, but I do not see why we cannot, to a certain extent, figure it out for ourselves, so far as Alberta is concerned. We can base our conclusions on hard facts, and here are a few of them.

United States Market Opening.

"Within the last decade the United States has been transformed from a beef-exporting to a beef-importing nation. Ten years ago they were exporting $150,000,000 worth of beef annually. To-day they are importing beef. I have been informed from authentic sources that their beef cattle have decreased enormously during the last ten years, and the average price of milk cows have more than doubled in that time, and within the same period the population of the United States has increased 20 per cent. The ranges of Mexico have been pretty well stripped of their beef supply, and, of course, the countries of Europe are quickly using up their stock. Foreign agents are now in the United States and Canada seeking out high types of breeding animals with which to restock the fields of Europe. Now, what does all this mean to us and our mixed farming country? It seems to me that it clearly proves that no matter what adjustments have to take place in the business world when the war is over, that the basic industry of Alberta—livestock raising—will hold its own for years, and that the farmers of this country will be able to continue doing a profitable business all through the period of adjustment. If we can keep our heads, cultivate habits of thrift and economy, we need have no fear, and will undoubtedly continue to make steady and substantial progress."

DIVIDENDS AND NOTICES

PROVINCIAL PAPER MILLS CO., LIMITED

Notice is hereby given that dividends of One and Three-Quarters (1¾%) per Cent. on the Preferred Stock and One (1%) per Cent. on the Common Stock of this Company have been declared for the current quarter, both payable October 1st, 1918, to shareholders of record at the close of business September 15th, 1918.

By order of the Board.
S. F. DUNCAN,
Secretary-Treasurer.

Dated Toronto, September 7th, 1918.

THE CANADIAN CROCKER-WHEELER CO., LIMITED

DIVIDEND NOTICE

The directors of the Canadian Crocker-Wheeler Company, Limited, have declared a One and Three-Quarters per cent. (1¾%) dividend on the Preferred Stock of the Company for the three months ending September 30th, 1918, to shareholders of record September 20th, 1918. Also a dividend of One and Three-Quarters per cent. (1¾%) on the Common Stock of the Company for the three months ending September 30th, 1918, to shareholders of record September 20th, 1918.

The stock books will be closed from the 20th to the 30th of September, both days inclusive.

Cheques will be mailed to shareholders on September 30th, 1918.

By order of the Board.
L. R. GRIMSHAW,
Secretary-Treasurer.

St. Catharines, September 4th, 1918.

DOMINION TEXTILE COMPANY, LIMITED

NOTICE OF DIVIDEND

A dividend of one and three-quarter per cent. (1¾%) on the Preferred Stock of the **Dominion Textile Company, Limited**, has been declared for the quarter ending **30th September, 1918**, payable **October 15th**, to shareholders of record **September 30th, 1918.**

By order of the Board.
JAS. H. WEBB,
Secretary-Treasurer.

Montreal, 4th September, 1918.

DOMINION TEXTILE COMPANY, LIMITED

NOTICE OF DIVIDEND

A dividend of two per cent. (2%) on the Common Stock of the **Dominion Textile Company, Limited**, has been declared for the quarter ending **30th September, 1918**, payable **October 1st** to shareholders of record **September 14th, 1918.**

By order of the Board.
JAS. H. WEBB,
Secretary-Treasurer.

Montreal, 4th September, 1918.

THE RIORDON PULP & PAPER COMPANY, LIMITED

PREFERRED STOCK DIVIDEND NO. 25.

Notice is hereby given that a dividend of 1¾%, (being at the rate of 7% per annum), on the Preferred Stock of this Company, has been declared payable September 30th, 1918, to shareholders of record at the close of business, September 25th, 1918.

By Order of the Board,
F. B. WHITTET,
Secretary-Treasurer.

Montreal, September 12th, 1918.

PENMANS, LIMITED

DIVIDEND NOTICE

Notice is hereby given that the following dividends have been declared this day for the quarter ending October 31st, 1918, one and one-half per cent. on the Preferred Stock payable on the 1st day of November to shareholders of record of the 21st of October, 1918, and one and one-half per cent. (1½%) on the Common Stock payable on the 15th day of November to shareholders of record of the 5th day of November, 1918.

By Order of the Board,
C. B. ROBINSON,
Secretary-Treasurer.

Montreal, September 16th, 1918.

CANADA CEMENT COMPANY, LIMITED

ORDINARY SHAREHOLDERS

DIVIDEND NO. 10

H. L. DOBLE,
Secretary.

Montreal, September 12th, 1918.

Central Canada Loan & Savings Co.

QUARTERLY DIVIDEND

Notice is hereby given that a Dividend of TWO AND ONE HALF PER CENT. (2½ p.c.) for the three months ending Sept. 30th, 1918, at the rate of TEN PER CENT. (10 p.c.) per annum, has been declared upon the Capital Stock of this Institution, and the same will be payable at the Offices of the Company, Toronto, on and after Tuesday, the first day of October, 1918. The Transfer Books will be closed from the 16th to the 30th of September, both days inclusive.

By order of the board,
E. R. WOOD,
President.

BENEFITS OF THE PANAMA CANAL

The United States government this fall will move far western wheat by way of the Pacific and the Panama Canal instead of across the continent by rail.

The plan is prophetic. While the Atlantic and the gulf feel the changes occasioned by the Panama Canal, it is the Pacific ports that actually realize the transformation. There is not a value upon the Pacific Slope that has not been enhanced by the canal, as there is not a cost of western products in New York that has not been favorably affected. And this influence is extending back from the Pacific into Montana, Idaho and the Rocky Mountain region generally.

British Columbia and Alaska also feel the benefit. The shipyards of the Pacific are quite as good for the purposes of this war as those of the Delaware. But for the canal the launchings at San Francisco, in the Columbia and Puget Sound would not have been, and Schwab would not have rejoiced Independence Day in the feats of ship construction on "the coast." Germany diligently prepared for war for a generation, but the United States forestalled her by a construction that will do much to thwart the Kaiser's plans immediately, and to prevent German aggrandizement hereafter. The canal as an engineering feat took the popular imagination for a day. Now it is accepted as an ordinary fact, like the Great Lakes. But the canal operates every day and more and more. It is a tremendous factor in the life of all the globe.

WINNIPEG RAILWAY DISAGREEMENT

Company Not Able to Grant Increases Asked for, Says Manager—Increase Will Necessitate Higher Rates

During August the employees of the Winnipeg Electric Railway Company presented demands for an increased wage scale. These demands the company refused to meet. In explanation the manager of the company, Mr. A. W. McLimont, has made the following statement to *The Monetary Times*:—

"We are in receipt of a demand from our motormen and conductors for a very large increase in pay. The demands they make upon us, effective September 15th, are as follows: For the first three months 47 cents per hour. For the next nine months 55 cents per hour. Thereafter 60 cents per hour. And overtime to be paid for at the rate of time and one-half. Their present rate of pay, as fixed by existing agreement, is as follows: First six months 30 cents per hour. Second six months 32 cents per hour. Second year 33 cents per hour. Third year 35 cents per hour. And 39 cents per hour for fourth year and succeeding years of continuous service with the company.

"The company's position in reference to this demand is that it is obliged to refuse the same for three main reasons: (1) There is in force an agreement effective from May 1st covering the rates of wages to be paid motormen and conductors up until 30th April next. (2) The rate of wages asked is entirely exorbitant and exceeds the rate of pay received by men in similar employment and under similar conditions and leaves no alternative to the company except a refusal. (3) To accede to the demands would mean immediate bankruptcy of the company.

"The principal reason advanced in support of the claim for increased pay at this time is increased cost of living. Upon examination it is apparent that there is no relation whatever between the increases demanded and the increased cost of living. The pay demanded represents an increase of approximately 60 per cent. The cost of living has not increased more than 2 per cent. since the agreement was entered into.

"From the financial standpoint, the company is utterly unable to meet the demands. At the present time our revenues are scarcely sufficient to pay our expenditures. The increase represented by this demand alone exceeds half a million dollars annually and this affects only one class of our employees. It must, therefore, be obvious that to attempt to meet these demands, together with the great increase in cost of material, freight, fuel, taxes and everything entering into the cost of service to the public, would mean immediate bankruptcy to the company.

"This is a case, continued Mr. McLimont, where motormen and conductors are using mailed fist tactics by the veiled threat in their application for a board of conciliation when they state that the application is strictly conditional upon the board being appointed, investigation completed and report submitted not later than the 30th inst.

"The government has granted a board of conciliation. Mr. R. S. Ward, a prominent labor man of Winnipeg, has been appointed to act for the conductors and motormen, and Mr. Isaac Pitblado, K.C., for the company.

"I think when a board of conciliation, created by the Dominion government, is given the power to say what wages shall be paid by this company to its motormen and conductors the board should also be charged with the duty of saying where and how the company is to obtain the necessary revenue to meet the increase, otherwise the labor of the board will be lost because it is not possible for this company to meet any substantial wage increase out of its present revenue."

HUDSON BAY COMPANY TO SELL LANDS

It is understood that the Hudson Bay Company will commence an active campaign to dispose of some of its lands in western Canada. Since 1915 there have, of course, been very few sales, and the prospective increased taxes makes the sale of the land more urgent. There is, moreover, a feeling that the large holdings of the company, together with similar holdings of other corporations, might be taken over by the Dominion government for the purpose of settlement.

ALLIANCE OF AMERICA AND JAPAN

Relations of America and Asia are of Great Importance to Canada

Clark University of Worcester, Mass., U.S.A., has just published an article with the foregoing title, written by John Stuart Thomson (who was born and educated in Montreal) author of "China Revolutionized," "The Chinese," and other books. It will be recalled that in his articles written for *The Monetary Times* Annuals of 1917 and 1918, Mr. Thomson said: "Japan should be brought in to the full as one of the world's policemen. . . . I urge the use of the safe Pacific lanes; the prompt use of Japan's full army force to maintain Russia; with this force, to crack Austria, and encourage Hungary, Bohemia, Poland and neutrals to join the Allies."

The Kingston "British Whig" of May 12th, 1917, said: "Stephen Pichon, France's foreign minister, and John Stuart Thomson, are the two leading publicists, who from 1914 onward have recommended that Japan's armies be brought in." *The Monetary Times* Annual for 1918, page 103, said: "From 1899, Mr. Thomson has been prime mover of a propaganda in the world's magazines to bring about a permanent naval defensive alliance of the English-speaking nations and France."

In this important article published by Clark University, Mr. Thomson urges that Japan be definitely added to these Allies. He covers the whole war, and after-the-war features of the case, with regard to reclaiming South Russia's coal and iron mines from Germany; the transportation of fifteen Japanese divisions via Canada to the western front; the use of Japan's ships to bring Australian supplies to the western front; Canada's and America's share in China's and Siberia's railways, mines and other franchises; America to back Japan's armies on the eastern front with billions of money; an arrangement to reclaim Bohemia, Bulgaria, Roumania, Poland, Russia, Hungary, for the allied side. Mr. Thomson says: "Nippon, America, Canada and the Allies must redeem Siberia and Russia by conscription for civilization."

As *The Monetary Times* pointed out on April 13th, 1917, Mr. Thomson was the first publicist in the United States to urge the United States, as early as January, 1916, to lend Britain twenty billions to finance and win the war. Mr. Thomson's articles in the "American Exporter," of New York, and the "Gateway" magazine of Detroit, Michigan, October, 1914; Newark, N.J., "Call," August 23rd and 30th, 1914; Troy, N.Y., "Budget," August 23rd and September 20th, 1914; Peking, China, "News," September 18th, 1914, were almost the first written in the United States and Peking, in favor of the Allies' cause against Germany; since which time, as pointed out on page 42 of *The Monetary Times*, August 16th, 1918, Mr. Thomson has been a consistent propagandist for the allied cause.

UNITED STATES CROP ESTIMATE

According to the annual crop estimate of the Continental and Commercial National Bank of Chicago, the yield of wheat, barley, rye, hay and cotton is greater this year than for 1917, but the production of corn, oats and potatoes has fallen off. Their estimate of the 1918 crop has just been made public, and the figures are as follows:—

Crop.	1918. Bushels.	1917. Bushels.
Wheat	900,177,000	650,825,000
Corn	3,106,656,000	3,159,494,000
Oats	1,402,731,000	1,587,286,000
Barley	223,183,000	208,075,000
Rye	74,000,000	60,145,000
All cereal	5,690,756,000	5,666,725,000
Potatoes	391,320,000	442,536,000
Hay (tame), tons	73,232,000	70,528,000
Hay (tame and wild), tons	103,000,000	.. ..
Cotton, bales	14,033,000	10,949,000

They add that, owing to damage by hot, dry weather since these figures were gathered there has been considerable deterioration in both corn and cotton, sufficient to warrant reducing above estimates 150,000,000 bushels of corn and 2,000,000 bales of cotton.

MANITOBA CROP ACREAGE

Dominion and Provincial Departments of Agriculture Issue Joint Statement This Year

The official figures as to crop acreage in Manitoba were announced on the 9th inst. by the Department of Agriculture. In previous years the Provincial government and the Dominion government have each compiled independent figures as to crop acreages, the figures published by the province, in almost every case, being higher than those published by the census and statistics office at Ottawa.

This year in the various provinces of Canada a plan was followed which gives one set of figures for mutual use by the Dominion and Provincial governments.

In June cards were circulated through the schools. These were filled in by farmers and returned for compilation. Each farmer reported upon his own operations only. In this way, it is believed, accurate figures have been received for that proportion of the farmers who reported.

The Dominion census of 1916 places the number of farms in Manitoba at 46,623, and this number was used as a basis for calculation. The number of farmers who actually reported upon this season's acreage was 17,808, which is a little less than two-fifths of the total number. In making this computation it was assumed that the crops of farmers who did not report would average equally with those who did report.

For purposes of more detailed information, the province was divided into five districts as follows:—

All east of the principal meridian (which runs 12 miles west of Winnipeg) constitutes the eastern district. The remainder of the province is divided into south central, south-western, north-central and north-western districts by two straight lines, one running westward from the principal meridian between townships 11 and 12, cutting through Portage la Prairie and Elkhorn, the other running north and south across the province between ranges 15 and 16, cutting the village of Holmfield, passing just east of Camp Hughes, west of Neepawa, along the eastern edge of the Riding Mountains and just east of Lake Dauphin.

The figures for last year and this year are set below:—

Crop.	Dominion & provincial estimate, 1918. Acres.	Dominion estimate, 1917. Acres.	Provincial estimate, 1917. Acres.
Fall wheat	2,734	3,860	3,009
Spring wheat	2,980,968	2,445,000	2,850,353
Fall rye	115,019	......	54,747
Spring rye	125,450	......	25,866
Fall and spring rye combined	......	37,999	......
Oats	1,714,894	1,500,000	2,230,005
Barley	1,102,965	708.000	1,270,724
Flax	107,961	16,300	63,605
Peas	3,235	......	3,888
Other grains	30,309	......	......
Potatoes	45,000	34,400	66,084
Roots	9.900	2,500	16,582
Fodder corn	12,340	9,800	34,100
	No.		
Horses	384,772	......	......
Cattle	746,899	......	......
Sheep	136,782	......	......
Swine	284,596	......	......
Turkeys	128,440	......	......
Hens	2,122,928	......	......
Geese	51,103	......	......
Ducks	51,552	......	......

Following is the way in which the principal crops are divided among the various crop districts:—

Crop.	Eastern. Acres.	North Central. Acres.	South Central. Acres.	North Western. Acres.	South Western. Acres.
Spring wheat	403,302	356,302	773,323	653,234	794,807
Fall rye	19,217	2,808	60,529	10,377	22.088
Spring rye ..	5,718	30,169	45,329	10,655	33,579
Oats	68,264	224,988	405,664	450,901	416,077
Barley	191,037	132,140	291,471	242,412	245,905
Flax	35,488	9,694	28,772	11,871	22,136

ANNUAL REPORT

OF

The Quebec Railway, Light, Heat and Power Co., Limited

FOR THE

Fiscal Year Ending 30th June, 1918

Submitted at the Annual Meeting held in Montreal on the 10th September, 1918

The Gross Earnings from Operation for the year were $1,797,852.83 as compared with $1,832,031.93 in 1917, being a decrease of:

$34,179.10

After adding Miscellaneous Income of $230,088.32, makes a total Revenue from all sources of:

$2,027,941.15

being a decrease of:

$34,951.58

The Operating and Maintenance Expenses were $1,235,724.33, as compared with $1,155,969.25 in 1917, being an increase of:

$79,755.08

The fixed Charges and Taxes amount to $696,909.92 leaving a Net Surplus of:

$95,306.90

After making provision for obsolete cars on City Street Railway Division and portion of Storage Battery installed in Queen Street Sub-Station, there remains a total at the Credit of Surplus Account to date of:

$753,091.17

Statements of Assets and Liabilities at 30th June, 1918.

NEW INCORPORATIONS

Three Companies With Capital of $1,000,000 Receive Charters

The three largest companies incorporated during the past week were the Aspen Grove Amalgamated Mines, Limited, Merritt, B.C.; the Canadian Feed Manufacturing Company, Limited, Montreal, Que., and the Canadian Tire and Rubber Company, Limited, of Toronto, all with capital of $1,000,000.

The following is a partal list of charters granted during the past week in Canada. The head office of the company is situated in the town or city mentioned at the beginning of each paragraph. The amount noted is the authorized capital, and the persons named are the provisional directors:—

Chilliwack, B.C.—Home-Makers, Limited, $100,000.

Prince Rupert, B.C.—Queen Charlotte City Mills, Limited, $49,000.

Merritt, B.C.—Aspen Grove Amalgamated Mines, Limited, $1,000,000.

Listowel, Ont.—Hackings, Limited, $100,000; C. B. Hacking, E. D. Bolton, J. W. Bernie.

Edmonton, Alta.—B. Friedman, Limited, $50,,000; B. Friedman, H. Friedman, M. I. Lieberman.

Quebec, Que.—Goulet and Belanger, Limited, $20,000; E. E. Goulet, L. A. Gaucher, F. E. Brousse.

Yarker, Ont.—Yarker Manufacturing Company, Limited, $250,000; N. G. Guthrie, R. Blake, W. S. MacCauley.

Dunnville, Ont.—Haldimand Machine Company, Limited, $40,000; G. H. Orme, T. J. McCutheon, R. Bradford.

Victoria, B.C. — Dominion Transportation Company, Limited, $10,000; Dominion Carton and Printing Works, Limited, $35,000.

Winnipeg, Man.—Peerless Sales and Construction Company, Limited, $20,000; J. W. E. Armstrong, E. B. Lindsay, A. McDonald. Turner Tractor Sales, Limited, $5,000; A. M. Doyle, A. J. Costigan, E. N. Dolmage. Ronald-Smith Cultivator Company, Limited, $20,000; A. B. Ronald, J. W. Boyd, W. J. Donovan. G. R. Bradley and Company, Limited, $20,000; B. C. Parker, C. A. Crawley, M. Hetherington.

Vancouver, B.C.—Atlas British Columbia Timber Company, Limited, $20,000; Pacific Smelting Company, Limited, $10,000; Great North-West Motors, Limited, $25,000; Ruby Creek Land and Log Company, Limited, $10,000; Economy Meat Company, Limited, $100,000; Cedar Cove Operations, Limited, $10,000; Flathead Syndicate, Limited, $10,000; British Columbia Wood Turners, Limited, $10,000; Shatford-Stevens, Limited, $10,000; South Vancouver Shingle Company, Limited, $10,000; W. A. Brown, Limited, $50,000.

Montreal, Que.—Senneville Development Company, Limited, $20,000; F. W. Westover, E. G. Place, G. W. Rowell. Oliver Motors, Limited, $20 000; H. Reider, C. G. Ogden. Lewis-S. Jaslow, $20,000; R. Chenervet, A. Moisan, J. Kellert. Swiftsure Steamship Company, Limited, $24,000; T. Robinson, A. J. Gutreich, W. J. Ryan. Can Bec, Limited, $500,000; E. Brossard, A, Forest, A. Lalonde. Canada Chemical Works, Limited, $50,000; R. O. Growthe, J. E. Prevost, H. F. Fortier. F. E. Smith, Limited, $20,000; G. V. Cousins, E. W. Westover. Canadian Feed Manufacturing Company, Limited, $1,000,000; J. R. Smith, H. J. Sterling, G. G. Reiger.

Toronto, Ont.—Braoeside Lodge Sanitorium, Limited, $60,000; G. A. Archibald, C. G. French, W. J. McKenna. Gratton, Limited, $40,000; R. D. Hume, A. J. Sneath, M. G. Kennan. Keen Fair Construction Company, Limited, $40,000; J. W. Bicknell, W. B. Sturrup, J. S. Duggan. K. and S. Canadian Tire and Rubber Company, Limited, $1,000,000; W. H. Cook, G. W. Home, V. W. Meek. A. F. Schnaufer Company, Limited, $400,000; J. M. Bullen, N. S. Robertson, W. Levy. Porcelain Products, Limited, $40,000; L. M. Summerville, E. G. Long, A. Mearns. Workmen's Book and Publishing Company, Limited, $40,000; J. Stafanitsky, G. Demeduck, S. Aronetz. Dominion Flax, Limited, $50,000; J. Wellington, N. S. Caudwell, D. A. McCrinnon.

RECENT FIRES

The Monetary Times' Weekly Register of Fire Losses and Insurance

Bow Island, Alta.—September 10—The Empire Elevator, owned by E. C. Ludtke, was destroyed.

Halifax, N.S.—September 12—The Royal Bank building, at the corner of Buckingham and Barrington Streets, was damaged.

September 14—The dock pumping house, boiler-house, air compresser structure and the old machine shop at the Halifax dock and shipyards were destroyed.

Hamilton, Ont.—September 16—Auto garage of J. Lampman and Sons on Queen Street South was damaged. Caused by tire vulcanizer becoming overheated. Estimated loss, $50.

Montreal, Que.—September 12—Building of T. P Oakes, 709 St. Catherines Street East, was damaged. Caused by dropping of lighted match. Estimated loss, $62,000. Insurance carried, $25,000.

Newcastle, N.B.—September 9—Barns of Clement Ryan and Grossman and Sons were destroyed. Estimated loss, $1,000.

ADDITIONAL INFORMATION CONCERNING FIRES ALREADY REPORTED

Britannia Bay, Ont.—August 31—Clubhouse and contents of the Britannia Boat Club were damaged. Estimated loss, $10,000. A total insurance of $2,000 was carried on contents.

The interim report of the Royal Commission to adjust the difference between the city of St. John and the New Brunswick Power Company grants the company a temporary maximum increase of 25 per cent. in electricity for lighting, 35 per cent. for power, 33 per cent. for fuel gas, 8 per cent. for lighting gas, and 38 per cent. to 44 per cent. in car fare. Transfers are to be given. Increases become effective on October 1st.

CONDENSED ADVERTISEMENTS

"Positions Wanted," 2c. per word; all other condensed advertisements, 4 c. per word. Minimum charge for any condensed advertisement, 50c. per insertion. All condensed advertisements must conform to usual style. Condensed advertisements, on account of the very low rates charged for them, are payable in advance; 50 per cent extra if charged.

SALESMAN.—Ten years' experience as contract agent with large Public Utility Company, open for engagement with well-established Company. Box 197, *The Monetary Times*, Toronto.

Fire Insurance Agency Wanted

Thoroughly established and well organized insurance agency would like to hear from first-class Fire Insurance Company, with a view to arranging Toronto Agency connections.

CANADA EXPORT PAPER COMPANY

Officials of the Canada Export Paper Company, Limited, and the five companies which compose it, recently returned from a trip to the mills of Price Brothers and Company, Limited, where the third quarterly meeting of the operating forces of the companies was held.

The first meeting, which was along organization lines, was held in Montreal six months ago, the second was held at the Laurentide mills, and, following the third meeting at Price Brothers last week, the fourth will be held at the Belgo-Canadian mills towards the end of the year.

These meetings, which are held under the auspices of the Canada Export Paper Company, Limited, of which Frank Steele is managing director, are designed in the first place to improve the quality of Canadian newsprint so that it will be second to none in the world's market.

The export company markets the entire output of newsprint of the Laurentide, Price Brothers, Belgo-Canadian, Brompton and St. Maurice companies, which goes abroad. It is not concerned with sales in Canada. But it is now employing a number of plans for the exchange of data between the different companies so that these large exporters of newsprint may be placed in a position to secure a maximum of efficiency in the industry and increase the prestige of Canadian newsprint abroad. The mills have an immediate market for all they can sell to-day, but they are overlooking no opportunity to strengthen their hold on the market against the day when competition will be keener.

The quarterly meetings now being held in turn at the different mills are attended by representatives from all important departments of each company. Sectional meetings are held among the different departmental heads from the various companies at which data of mutual interest are submitted, all with a view of giving the companies the benefit of the experience of each. The results obtained already are said to be important and will tend steadily to the improvement of the industry's efficiency.

Sir William Price, head of Price Brothers, presided at the general meetings of all the officials held at the Price Brothers' plants last week. Some sixty in all attended. The meetings were closed with a dinner at which addresses were given by Sir William Price, Frank Steele, Geo. Chahoon, Jr., G. Biermann, J. H. Bothwell, R. O. Johnson and John Ball.

A scarcity of coal is being experienced in Great Britain, and it is understood that all coal miners in the army, with the exception of those in the highest category, will be withdrawn to engage in mining operations.

DOMINION CHARTERED ACCOUNTANTS' CONVENTION

The annual convention of the Dominion Association of Chartered Accountants commenced in Montreal on the 18th instant, and will end on the 21st. Delegates from all over Canada are in attendance, including representatives of the provincial institutes.

Addresses will be given at the convention by Thos. Mulvey, under secretary of state, on the Companies' Act, and R. W. Breadner, commissioner of taxation for Canada, on the Income Tax Act, and War Profits Taxation. Another address, which will contain much of interest for chartered accountants specializing in municipal work, will be given by Harvey Chase, an expert municipal accountant of New York, who will deal with municipal accounting, sinking funds and reserves.

CANADIAN TRADE DECREASES

A decrease of nearly two hundred and seventy-one million dollars in the total trade of Canada for the first five months of the fiscal year, as compared with the same period in 1917, is shown by the monthly trade statement issued from the customs department on the 13th inst. The statement shows that Canada's trade for the five months of the present fiscal year, which ended on August 31st last, totalled $875,178,588. A year ago the total for the five months was $1,146,054,498. The decrease, therefore, amounts to $270,875,010.

The decrease is largely due to the falling off in exports, which this year totalled $451,846,814, as against $654,242,260 in 1917. Imports decreased $60,969,125 in the five-month period, the total for 1917 being $474,031,859, and for the present year $413,062,734. Domestic agricultural products exported show a decrease of $122,478,077, when compared with last year. The total value of domestic agricultural products exported during the five-month period last year was $230,107,023, while this year it was only $117,518,046. Domestic manufactured articles to the value of $107,434,052 were exported from Canada during the first five months of the fiscal year, which was just $92,292,484 less than last year's total, which was $280,716,536. Exports of forest products show an increase of approximately eleven millions over last year, and of minerals about four millions.

Dutiable goods to the value of $229,612,483 were imported into Canada during the five-month period, and free goods to the value of $183,450,251. Duty collected on the former class of goods this year amounted to $69,613,507, a decrease of $6,086,303, when compared with 1917.

Merchants Casualty Co.

Head Office: Winnipeg, Man.

The most progressive company in Canada. Operating under the supervision of the Dominion and Provincial Insurance Departments. Embracing the entire Dominion of Canada.

SALESMEN NOTE

MANITOBA WAR LOAN ORGANIZATION

Work This Year Will Be More Comprehensive Than Last —Local Financial Men are in Charge

The school of instruction for the Victory Loan supervisors of Manitoba, which was carried on in the Northern Crown building in Winnipeg, was ended on the 14th inst. The supervisors left for various parts of the province. This marks the beginning of the Victory Loan campaign in Manitoba. The meetings in the Northern Crown building have been more in the nature of a conference than a school, but the object was to advise the supervisors with reference to their duties in all details. A. L. Crossin and J. A. Anderson have been the chief instructors, and every phase of the great undertaking was thrashed out over and over again.

The organization this year will be more thorough and complete than that of 1917, and the canvass will be of a most systematic character. There is every indication that the total subscriptions will exceed forty million dollars. The total last year was $32,326,600.

For the purposes of the canvass the province has been divided into 16 divisions, over which there will be eight supervisors, all well known Winnipeg financial men, including J. A. Thompson, G. M. Black, W. J. O'Neill, A. Norman Strang, T. R. Billett, D. L. Rossini, W. H. Gardner and J. E. Botterell.

Mr. Thompson will have as his assistants J. A. Davis and A. B. Estlin, of Melita, and will have charge of the district including Boissevain, Pilot Mound, etc. G. M. Black will have with him George H. Balls, and will be in charge of the district including Manitou, Treherne, etc. W. J. O'Neill will have as assistants J. H. O'Connor and J. A. W. Lane, of St. Annes, and will have charge of municipalities, including such towns as Emerson, Beausejour, etc. A. N. Strang will have with him R. McMillan and Joe Snowden, and will be in charge of an area having such centres as Elkhorn, Virden and Wawanesa. T. R. Billett will be assisted by A. A. Evans, of Brandon, and A. Powell, and will have charge of districts including towns of Hamiota, Minnedosa, Birtle, Shoal Lake, etc. D. L. Rossini will be assisted by Major A. F. Brown, D.S.O., and will be in charge of districts including Gladstone, Neepawa and Portage la Prairie. W. H. Gardner will be assisted by R. R. Pattinson and A. L. Petty, and will have charge of a district including Dauphin, Swan River, etc. J. E. Botterell will be assisted by Arthur W. Humber and Charles Gifford, of Selkirk, and will be in charge of the area including the towns of Selkirk, Stonewall, etc.

The cities of Brandon and Winnipeg are separately dealt with. The entire province is most carefully subdivided to prevent the possibility of overlapping or doubt with reference to territory.

Press Co-operates.

The press committee for the coming loan also met recently, when tentative arrangements were made for the provincial convention of editors, fixed to take place at the Royal Alexandra Hotel on Tuesday, September 24.

At the afternoon session addresses on the loan will be given by A. L. Crossin and J. A. Anderson, vice-chairman and secretary respectively of the general Victory Loan committee. Both of these addresses will be very brief, and at their conclusion both speakers will answer questions which may be asked by the editors present. Every difficult phase of the subject will be submitted for consideration and points regarding which there is a difference of opinion will be thrashed out. At the opening of the afternoon meeting brief addresses will be made by the editors of the Winnipeg dailies: J. W. Dafoe, of the "Free Press", R. L. Richardson, M.P., of the "Tribune", and Knox Magee of "The Telegram"; and by several editors from various towns of the province. Mr. Dafoe, who was named as chairman of the provincial press committee by Sir Thomas White, will preside.

Dinner will be served at the Royal Alexandra at 7 o'clock, and at its conclusion a brief statement regarding the loan campaign will be made by Sir Augustus Nanton, the provincial chairman; Dr. Howard P. Whidden, M.P., of Brandon, will also speak.

In the afternoon the editors will choose a committee to have charge of such publicity work as may be done before and during the campaign for the sale of the bonds.

Since the arrangement was made that a provincial conference of editors would be held assurances have come to the press committee that such a conference would be attended by practically every editor in the province. All the country weeklies, foreign weeklies, trade papers and the daily papers are looked to by the federal government to assume their share of responsibility for the success of this great undertaking.

YIELDS ON INVESTMENTS IN STOCKS AND BONDS

The following table of investment yields of stocks and bonds has been compiled for *The Monetary Times* by Messrs. Morrow & Jellett, Members Toronto Stock Exchange, 103 Bay Street Toronto:—

Here is Your Opportunity
The success which has attended the operations of the North American Life throughout its history has made association with the Company particularly inviting.

The year 1918 promises to be bigger and better than any heretofore. Some agency openings offer you an opportunity at this time.

Correspond with
E. J. HARVEY, Supervisor of Agencies.

North American Life Assurance Company
"SOLID AS THE CONTINENT"
HEAD OFFICE - TORONTO, CANADA

"I Wish I Had Taken Twice As Much!"
Nothing is more often repeated in letters received at our office than the expression "I wish I had taken twice as much insurance while I was about it." When endowments, dividends or cash settlements are paid, the assured very often acknowledges the remittance with that remark The truth is very few men take as much Life Insurance as they can reasonably carry—and repentance often comes when additional Insurance is not procurable. Probably every reader of this paper believes in Life Insurance and carries more or less of it but one should ask himself the question, **Am I Carrying as Much Insurance as I Can Afford?** If the policyholders who are now entering the Company could read the evidence of gratified policyholders and beneficiaries, they would make a great effort to increase the amount applied for—and existing policy holders would double the amount of their protection. "One word more": — What income would your present insurance yield the beneficiary at say 6%?

WINDSOR RECORD EXPIRES

After an existence of nearly 30 years, the Windsor "Record" newspaper passed out of existence on September 11th, and in its place came the first issue of the Border Cities "Star," an eight-page evening daily, with William F. Herrmann, of Saskatoon, as publisher. The new paper was well received, and under the guidance of a number of business men who acted as newsboys, turning the receipts into the Red Cross Fund, the initial sales were large.

GRAND TRUNK PACIFIC ANNUAL

The annual meeting of the Grand Trunk Pacific Railway Company was held on September 17th, at the general offices, McGill Street, Montreal. Howard G. Kelley, president of the company, presided, and the following directors were present: Hon. R. Dandurand, Hon. Wilson McPherson, W. H. Ardley, E. J. Chamberlin, W. H. Biggar, J. B. Fraser, J. E. Dalrymple, Jules Hone, Frank Scott.

The president reported that indispensable improvements and betterments were being carried out to take care of the increasing demands of traffic. While there was a very large increased acreage under crop during the past season, there will be a decrease in the yield, owing to unfavorable crop conditions.

Settlements and development is continually taking place in the new country along the company's lines. The following directors and officers were elected: Alfred W. Smithers, Sir H. M. Jackson (Baronet), Sir Wm. Lawrence Young (Baronet), John A. Clutton Brock (London, Eng.), Howard G. Kelley, Hon. R. Dandurand, Jules Hone, W. H. Biggar, K.C., Frank Scott, J. E. Dalrymple, W. H. Ardley (Montreal), E. J. Chamberlin, J. B. Fraser (Ottawa), Wm. Molson MacPherson (Quebec), Peter McAra (Regina). Mr. Howard G. Kelley was elected president of the company; W. P. Hinton, vice-president and general manager, Winnipeg; W. H. Biggar, K.C., vice-president; Frank Scott, vice-president and treasurer; J. E. Dalrymple, vice-president; H. Philips, secretary; W. H. Ardley, comptroller, Montreal. The annual meetings of the Grand Trunk subsidiary companies were also held, at which directors and officers were elected.

WATERWAYS COMMISSION DECISION

St. Lawrence Power Company Gets Power Rights at Long Sault Rapids for Five Years

Permission has been granted by the International Joint Waterways Commission to the St. Lawrence River Power Company, to put in a submerged weir in the South Sault Rapids of the St. Lawrence River from the mouth of their power canal on the mainland to Long Sault Island. Certain provisions were attached to the permission. The weir is to go in for five years, or till the end of the war, whichever is the latest date. It must then be removed. But the applicants can approach the commission a year before the period is up, and ask that it remain in. Before the commission will give a decision on this, more evidence will be taken and more arguments submitted as to the effect of the Ashburton Treaty, and whether the treaty of 1909 supersedes this.

The meeting of the commission was held in private, and there was considerable discussion before the two sides could come to the final agreement. In making their order, the commission definitely states that it is an "interim order," made solely because of war needs. That it is not a final decision in the case is shown by the statement in the preamble to the order that "in order to arrive at a final decision further evidence should be taken, and further argument submitted, especially as regards the effect of article 7 of the Webster-Ashburton treaty in so far as it may or may not constitute a bar to the construction of the said weir, and with regard to the question of whether the said article has been superseded by the treaty of January, 1909."

The Order as Granted.

The decision of the commission is as follows:—

"It is hereby ordered as an interim measure that the construction of the said weir and its maintenance until the expiration of the term of five years from the date hereof, or until the termination of the present war, is hereby approved upon the following conditions:—

"(1) That at the expiration of said period of five years, or upon the termination of the present war, whichever shall last occur, said weir shall be removed by the applicant; reserving, however, to the applicant or any other interested party the right to apply to the commission at least one year before the expiration of the said period for a further continuance of the said weir, and on such application the commission may approve of such continuance on such terms and conditions as it may deem appropriate and equitable for the protection of the rights and interests of the people on both sides of the line.

"(2) That the said weir shall be constructed and maintained in accordance with the plans mentioned, and under all the terms and conditions set forth in the permit granted by the secretary of war, dated September 10th, 1917, so far as the same are applicable.

"(3) That for the purpose of protecting the rights, property and interests on either side of the boundary from any injurious effect resulting from the construction and maintenance of said weir, the commission will, during the term of its approval, herein retain jurisdiction over the subject matter of said application, and may make such further order or orders in the premises as may be necessary.

"Provided that in the foregoing order the commission shall not be deemed to have considered nor passed upon any question pertaining to the rights of the applicant to divert water from the St. Lawrence River."

COBALT ORE SHIPMENTS

The following is a statement of the shipments of ore, in pounds, for the week ended September 13, 1918:—

Pittsburg Loraine, 33,552; Dominion Reduction, 103,000; National, 59,215; O'Brien, 64,010; Right-of-Way, 77,628; Coniagas, 175,840; total, 513,245.

The total shipments since January 1st, now amount to 20,530,359 pounds, or 10,265.2 tons.

TEXTILE FIRM TO MAKE THREAD

The recent order-in-council passed by the government offering a bonus to Canadian manufacturers installing machinery and producing Canadian-made linen threads and yarns is producing results. One firm, Dominion Linens, Limited, of Guelph, has already arranged with the government and the War Trade Board to start the new industry, and negotiations are now progressing with other Canadian textile manufacturers. Raw material from Canadian flax is to be used. This special inducement given to start the new industry in Canada is based upon the war-time scarcity of yarns and threads in Canada. Hitherto the supply was obtained from Great Britain or the United States, but their output is scarcely sufficient now to meet home demands. The shortage in Canada is felt particularly by boot and shoe and leather goods manufacturers.

IMPERIAL OIL EXTENDING IN WEST

Considerable extensions are being made by the Imperial Oil Company at a number of points in the three prairie provinces, and especially in Saskatchewan, where, in addition to big new tankage capacity, additional warehouses are being erected. The construction of tanks is under the charge of C. M. Moore, of Regina, superintendent of the refinery plant.

In Saskatchewan, large storage tanks are being built at thirteen points. At Moose Jaw an addition is being made to the plant, and at Rosetown, in addition to 100,000-gallon oil storage tanks, the company is building a solid brick warehouse, 40 by 60 feet, two stories high, with an eight-foot basement. Two tanks are being built at each of the following points: Weyburn, Swift Current, Saskatoon, Battleford, Prince Albert and Rosetown, and one at Moose Jaw.

In addition to the tanks being constructed in Saskatchewan, the programme provides for two in Manitoba and eight in Alberta, making a total of twenty-three for the three prairie provinces for this year.

NEW CANADIAN NORTHERN DIRECTORATE

Some Members of Old Board and Some New Directors Appointed—D. B. Hanna is President

The reconstituted Canadian Northern board of directors under the new government ownership regime was announced this evening. The operation of the system will be under the presidency of Mr. D. B. Hanna, who has been the operating executive head of the company's lines since 1896, and who has been acting head of the board for the past few months since the exit of Sir William Mackenzie and Sir Donald Mann.

Mr. Hanna will, for all practical purposes, have a fairly free hand in operating the system on strictly business lines. Mr. C. J. Mitchell, formerly financial controller for Mackenzie and Mann, will continue as a salaried executive director, dealing mainly with financial aspects of operations, while Major Graham Bell, acting deputy minister of railways, will be a third director constantly engaged on the job. He will provide a medium for direct governmental representation on the board, consulting on questions of policy with the Cabinet through the minister of railways, and reflecting at the board's meetings the government's policy with regard to financing, extensions, equipment, rates, etc.

The New Members.

The other directors appointed are: Robert Hobson, of Hamilton; Frank P. Jones, of Montreal (vice-chairman of the War Trade Board); E. R. Wood, of Toronto; R. T. Riley, of Winnipeg; and C. M. Hamilton, of Weyburn, Sask. They are all successful and well-known business men of proven organizing and executive capacity. They will in effect be the advisory council for the three first-named directors, meeting periodically to consider and advise on all questions affecting the operation of the system on business principles.

A Temporary Arrangement.

The establishment of the new board is, as has already been intimated, more or less of a temporary expedient for the operation of the system, pending the final solution of the whole nationalization problem. For the present the operation of the Intercolonial and National Transcontinental will continue under the same control as at present—viz., under the supervision of the railway department and the direct management of General Manager Hays. When the Grand Trunk and Grand Trunk Pacific systems are eventually nationalized, the government's present intention is to carry out the policy recommended in the Drayton-Acworth report, by bringing the whole government system under one independent board of management, with a quasi-permanent term of office, and divorced from direct or indirect governmental or political interference. Meanwhile the Canadian Northern system will be operated by the new board representing the new Canadian Northern Company as a separate business entity, removed from the active direction and influence of the railway department, but subject, nevertheless, to the final arbitrament of the government in questions of finance or policy.

Sketches of New Directors.

Mr. Hobson has 17 years' experience in railroad work, in which he was engaged up to 1896. He is a son of the late Joseph Hobson, who was chief engineer of the Grand Trunk system until his retirement in 1917. The new member of the Canadian Northern Railway directorate is a member of the American Institute of Mining Engineers. He has been intimately connected with the production of iron and steel in Ontario. In 1908 he was president of the Canadian Manufacturers' Association.

Frank Percy Jones was born at Brockville, Ont. For some years he was in the service of the Nova Scotia Steel and Coal Company and afterwards became general manager of the Dominion Iron and Steel Company. He filled this position from 1905 to 1909, and then became manager of the Canada Cement Company. Upon the formation of the War Trade Board Mr. Jones was appointed its vice-chairman.

E. R. Wood, Toronto, was formerly a telegraph operator. In 1884 he entered the service of the Canadian Loan and Savings Company, of which he later became president and managing director. Mr. Wood was for some years a member of the Canadian Northern Railway Board.

R. T. Riley is a prominent Winnipeg business man and is connected with several of the leading financial and industrial institutions of that city.

Mr. Hamilton is a farmer of the Weyburn district, who has made a study of transportation problems, with particular reference to agriculture.

Mr. Hanna, the president, has risen from the ranks in railway work. In 1896 he was appointed general superintendent of the Canadian Northern. Since then he has been third vice-president and general manager.

OUR NEGLECTED IRON ORES

Great Need for Research Assistance in Development of Industry in Canada

By A. T. Drummond, LL.D.

Whilst the recent report of the Imperial Munitions Board, showing the enormous output of the munitions factories of Canada, affords reason for congratulation, there are some associated conditions which are not so satisfactory, either at present or in view of the future. The output of shells and other material means, the report informs us, the consumption of from 50,000 to 80,000 tons of steel monthly without considering the other requirements of the country. The most, and probably nearly the whole, of this steel comes from the United States and Newfoundland, and requires thus every month for munitions alone a sum of from $3,000,000 to $4,000,000, which goes out from us to develop mines and manufacturing interests elsewhere. And yet, in very accessible localities in both Ontario and Quebec, we have enormous areas of high-grade iron ore which still awaits research in finding a method of economically adapting it to all the uses to which steel and iron are applied. The problem of economically reducing these ores is of enormous importance to the country, but its solution, on account of the probable time and expense involved, is apparently beyond the reach of the private individual. What, then, have the governments done? Whilst research was one of the first and most important duties in ascertaining and developing the resources of the country, our governments, both of the Dominion and the provinces, with an attitude hard to explain, have, in past years, been contented to leave practically all experimental work in proving the values of our resources to the possibilities of private enterprise. In this particular case unsuccessful efforts were made by the Dominion government shortly before the war to apply electricity in the reduction of these iron ores, but it required as experts in charge of a work like this men not merely of special knowledge, but of strong initiative and enthusiasm and of great patience and resourcefulness, and backed by a government determined to find a solution, and to furnish the funds, continuously and ungrudgingly, until a solution was found. Apparently, the government was never in touch with the special experts required, or it was unwilling to spend the money—probably both. The war broke out and steel was needed in vast quantities for munitions and for railway and other engineering works, but Ontario and Quebec's great areas of iron ores were practically unavailable. And this is the condition today, although nobody doubts that research will find a solution. Canada is now large enough in population, manufacturing and wealth to lay down the general principle that where its raw materials are easily accessible they should be developed into the finished product within the country for consumption there or for export, and it is one of the duties of the government to foster this principle. The government of the country is a business to be carried on by business men, and not, as so constantly in the past, made a mere football of opportunity for party politicians.

A shipping merchant of Montreal advocates that the Dominion government should provide better elevator facilities in the city of Quebec in order to relieve the pressure on Montreal in the shipment of grain.

Review of British Columbia Finances

History of Province's Debt, Expenditure and Revenue—Growth of Assets—Difficulties in Meeting Financial Requirements—Revenue has Generally Lagged Behind Provincial Ambitions—British Columbia Claims Special Consideration From Dominion.

SOME of the Canadian provinces have at times enjoyed a revenue quite ample for their requirements. This fortunate condition has never been enjoyed by British Columbia, the constant efforts of which have been directed towards making its revenue meet its expenses. In fact, a resident of the province, writing fourteen years ago, said: "In the vain attempt to make revenue meet expenditure, British Columbia has already exploited all the sources of revenue left to her by the terms of union, and is drawing from these to the limit in disregard of the hampering effect upon the immigration of labor and capital into the province, and upon the operations and revenue-producing powers of those who are already there."* From 1871, the year that the province joined Canada, up to 1903, a deficit was incurred in all but three years. From 1904 to 1910 a substantial surplus was realized, and since that year there has been an annual deficit amounting to several millions of dollars.

Interest has constituted a heavy annual charge upon the treasury. The debt of the old province of British Columbia was assumed by the Dominion in 1871, but borrowing commenced almost immediately, and recurring deficits have also caused additions to capital charges. For the year 1913-14 interest payments amounted to $330,587. For the year 1916-17 they were $827,774. Expenses incidental to borrowing, such as discount on securities sold, which has been large of late, commissions, and exchange on funds transferred, have been included in the gross expenditure.

The cost of legislation remained fairly stable up to 1900, since when it has increased considerably. This has been due to increased business, and greater incidental expenses. For the year 1916-17 it was $206,281.

The rapid expansion of the different departments of provincial government has produced a phenomenal rise in the cost of "civil government." In 1872 this amounted to $101,935; in 1916-17 it was $1,477,611. These sums do not include a number of items such as rents, transportation of provincial officials, and the upkeep of the government house, which should be mentioned here. These, however, have never amounted to much in the aggregate; transport cost $32,374 for the last year. Revenue services, that is expense incidental to collecting revenue, cost $18,196 in 1916-17. Miscellaneous expenditure, which appears to be an essential part of all provincial budgets, required the substantial sum of $1,005,264. In 1912-13 it amounted to $3,912,366.

Coming now to some of the main departments of government, outside of the ordinary functions of legislation and the maintenance of departments, we find that education has entailed an ever-growing expense, amounting, for the last year, to $1,331,413. This is $3.40 per head of population as given by the Dominion census of 1911. It must be remembered, however, that the province supports an excellent educational system, including a university, and that the existence of many small and widely scattered communities has thrown a considerable burden on the shoulders of the provincial department. The same feature of the province and the fact that much of the population consists of mining and lumbering towns has resulted in a heavy expense for the administration and enforcement of justice. The salaries of judges, etc., have been reduced from $161,286 in 1910-11 to $59,201 in 1916-17; but other expenses have grown to $1,331,413.

Pursuing an aggressive policy in the erection of public works, in 1913-14 $5,322,386 was spent on roads, streets, bridges and wharves. New work has, of course, been curtailed since then, but even in 1916-17 almost two millions were spent. Steamboat, ferry and bridge companies have been liberally subsidized in recent years to the extent of almost one hundred thousand dollars per annum, and the government has maintained fish hatcheries for over a decade at considerable expense. Other public works cost $2,283,236 in 1911-12, and almost four million in 1912-13, but practically nothing is now being spent in this way. Much was also spent upon works and buildings (including the new provincial legislative building) up to 1915, but this has also been reduced.

A liberal policy has always been pursued in supporting charitable institutions; this has been necessitated by the economic conditions of the province. The principal institutions of this kind are the hospital for the insane, the various hospitals and the provincial home, now costing altogether about $800,000 per annum.

All of this expenditure has not, of course, been made on current account. The province has very substantial assets to balance its present heavy debt. These are principally public buildings, roads, and several hundred miles of railway, in addition to sinking funds for the redemption of its loans.

---

*Cowan: "British Columbia's Claim upon the Dominion for Better Terms," page 18.

The value of buildings, roads, bridges, and other properties is given as $20,255,924 on the 31st March, 1917. The provincial parliament buildings, which were completed only a few years ago, and are handsome and commodious, are valued at $10,629,203. Roads, bridges and wharves cost over $9,000,000. The balance is made up of road machinery, printing plant and equipment, and the fish hatcheries erected and maintained by the province.

The payments which are received annually from the Dominion government are capitalized at five per cent. and regarded as an asset of $12,462,701. Sinking funds in 1917 totalled $3,429,135. Another capital account was that with the Dyking Districts, showing a credit balance of $581,903. Lands which had been granted to railways, and as Indian reserves, were valued at $2,734,767. Current assets of various kinds make up $8,047,264, the principal items of which are on account of the Canadian Northern Pacific Railway. The total assets are, therefore, $47,609,708.

Revenue.

As previously mentioned, many sources of revenue have been used, and with the growth of population and industry, income has steadily increased. In 1912-13, however, a maximum of $12,436,027 was reached, since when revenue has fallen off to less than $7,000,000. From the Dominion government approximately $700,000 is received by way of annual subsidy, etc. This is made up of a fixed payment of $180,000, formerly $35,000; an annual grant of 80 cents per head of population, now amounting to $313,984; the debt allowance granted the province in 1871, which has never been fully utilized, and on this account $29,151 is now received. In addition, there are two annual payments of $100,000 each; the one was granted in consideration for the lands conveyed to the Canadian Pacific Railway when the building of that road was arranged; the other is a special payment provided by the British North America Act, 1907, in view of the heavy expenditures which the province found it necessary to incur.

From 1881 to 1912 a poll tax of $3 on every male resident over 18 years of age was levied, which yielded close to $400,000 in 1911-12. This is no longer utilized. A tax on real property has, however, been levied since 1876, which has proved a very dependable source of revenue, paying over $500,000 in recent years. Wild lands are not included under this head, but are subject to a tax relatively greater in proportion to their value, which also yields over half a million. The province imposes a corresponding tax on personal property amounting to $291,412, and the tax levied on income above a minimum of $1,500, yields about the same amount. It is thus seen that sources of revenue which are not utilized at all in some of the Canadian provinces are made to produce well over a million and a half. And these taxes not only apply to those parts of the provinces not municipally incorporated, but also to the citizens and property in the various cities and other municipalities.

The mining industries of the province are made to produce revenue by a system of royalties and taxes, which produce almost half a million; in most cases there is a royalty on the product, but where holdings are unworked an ordinary tax is imposed. By similar measures the lumber industry is made to yield $1,759,469. A very comprehensive license system applies to almost all classes of business and yields close to $200,000. Special licenses are also required under recent acts regulating the motion picture business and the use of motor cars. A provincial succession duty yields amounts varying from $100,000 to $300,000.

This does not, however, exhaust the sources of revenue. Such sources as probate fees, law stamps, and fees for the registration and incorporation of companies, which are used in most of the other Canadian provinces, are used in British Columbia. Income is also derived through the printing office and other institutions like the Hospital for the Insane and the Provincial Home.

Until the war checked the flow of immigration, a great deal of land was sold by the province, and as much as $2,618,188 realized in this way in 1909-10. Most of this revenue has, of course, now disappeared. Much of the province's land has, moreover, been continually leased for lumbering and other purposes. As part of a policy of restriction of foreign immigration, a heavy tax was until quite recently imposed on Chinese immigration. This, however, is not now used. Miscellaneous receipts, fees of courts, etc., have ordinarily yielded about $200,000.

Debt.

The provincial debt, as at the 31st March, 1917, was $23,427,171. The capital assets as described above exceeded this debt by $16,135,272. It must be remembered, however, that the annual payments from the Dominion government are an asset only from the accounting point of view; and also that the province has potential liabilities in the form of guarantees of the principal and interest of the securities of railway companies and other institutions, to the large amount of $74,822,072, of which $64,437,929 has been already issued. Current liabilities in 1917 exceeded current assets by $1,428,581.

PRINCE ALBERT UNABLE TO GET GUARANTEES

Representatives of the city of Prince Albert waited on the provincial government on September 16th in connection with the financial affairs of the northern city, which have recently been investigated by C. J. Yorath, commissioner of the city of Saskatoon, on behalf of the bondholders and ratepayers.

Finances of Prince Albert are in somewhat of a chaotic condition owing to the liberality with which the ratepayers guaranteed the bonds of a large industrial concern which was unable to keep its bargain from a variety of causes. The ambitious La Colle power scheme has proved a tremendously expensive proposition, and the city has spent a large sum on it and more is required before the work can be completed. On top of these two large capital debts there has been the usual issue of city bonds for the purpose of building pavements, sidewalks, furnishing fire protection, light and water and the other conveniences of a modern city. Prince Albert has, as a result, a bonded indebtedness of about $4.000,000, and is now hard put to it to pay interest charges and current expenses without taxing the ratepayers out of existence.

Mr. Yorath, after a long investigation, submitted a proposition, some phases of which were not acceptable to the bondholders and it is understood that the visit of the delegates of Prince Albert was to secure the guarantee of the provincial government for the bonds of Prince Albert in connection with a general reorganization of the city's finances. It is understood that the provincial government declined absolutely to consider the question of a guarantee.

The Toronto Shipbuilding Company has secured contracts for the building of ten wooden vessels for the French government.

At a meeting of the organizers of the second Victory Loan campaign for Quebec, held on the 12th inst., Sir William Price and Sir George Garneau were chosen as honorary presidents of the committee, and Hon. P. J. Paradis and Mr. J. M. McCarthy as active presidents. Sub-committees will be immediately organized.

CITY OF EDMONTON FINANCES

Large Reduction in Assessments Necessitates Higher Tax Rate—Expenses of the Government are Higher

The city of Edmonton tax rate for the current year will be 30 mills, it was recently decided. Last year the rate was 26½ mills. A reduction in assessment of land of almost 24 per cent. was made during the past year. Owing, however, to modifications in the assessment of buildings and improvements, the net decrease in assessment is only 8¼ per cent. For school purposes the assessment has decreased 7.87 per cent. in the case of the public school district, and 11.28 per cent. in the case of the separate school district.

The total levy required for general municipal, debenture interest and redemption, and school purposes, amounts to $2,762,563 as compared with estimates of $2,659,658, and actual expenditures of $2,640,370 for 1917.

In the estimates for general municipal expenditures, provision has been made for $250,000 treasury bills maturing on first instant, and $100,000 for tax exemptions on soldiers' homes. These items, however, are largely offset by the estimated returns from the business tax ($150,000), and income tax ($135,000), amounting in all to $285,000. The total uncontrollable estimated expenditures included in the above amount for general municipal purposes, is $728,165.04 as compared with $654,524.58 (actual) last year, or an increase over 1917 of $73,640.46. This is principally due to the increase in the scale of wages to civic employees arising out of the higher cost of living, etc. Sundry revenue is estimated at $256,068.87 against $279,829.66 for 1917.

The following statement compares the assessment and tax levy of Edmonton for 1917 and 1918:—

Net Assessment.

	1917.	1918.
Net assessment for municipal purposes—		
Land only	$100,213,850	$ 76,489,795
Buildings and improvements.	....	15,455,560
	$100,213,850	$ 91,945,355
Public School District	89,517,300	82,473,560
R.C. Separate School District	11,211,530	9,947,135

Tax Levy.

Amount Required (inclusive of discount).

	1917.	1918.
General municipal purposes	$891,903.26	$1,052,774.31
Debenture interest and redemption	952,031.57	896,467.21
Public School District	603,759.07	725,767.32
R.C. Separate School District	86,889.35	87,534.72
Library board	35,074.84	....
	$2,659,658.09	$2,762,543.62

LOAN COMPANIES WILLING TO FINANCE FARMERS

"The loan companies will assist the farmers this fall," said Hume Cronyn, M.P. for London, Ont., managing director of the Huron and Erie Mortgage Corporation and of the Canada Trust Company, and a director of the Mutual Life Assurance Company.

Mr. Cronyn, after making a tour of inspection in Alberta and Saskatchewan, said that money would be available from the coffers of the mortgage companies, especially for those farmers who as a result of drought and frost are short in crop yields this year. He pointed out that some of the farmers in the district where the yield is small will require financial assistance, many of them during the past year or two having assumed new obligations as the result of the big demand for wheat and prevailing high prices for grain.

That the request of two of the principal cities of Saskatchewan for permission to operate one-man street cars will be given consideration by the government was the statement of the provincial minister of municipal affairs recently.

PURPOSE OF BRITISH BANK MERGERS

London City and Midland's Chairman Says Move Necessary to Maintain Britain's Position

Sir Edward Hopkinson Holden, chairman of the London City and Midland Bank, Limited, at a special meeting of stockholders held recently for the purpose of approving the merger of that institution with the London Joint Stock Bank, made a speech in which he defended the current movement for bank amalgamation in Great Britain.

Sir Edward declared that larger financial institutions were necessary, first, because of the great demands upon banking facilities which would accompany the restoration of pre-war industries. This alone, he estimated, would require $1,500,000. In the second place, said Sir Edward, British banks would be called upon to meet foreign competition and maintain London's position as the financial centre of the world. He estimated the deposits of the five principal German banks and their affiliations at $5,700,000,000, including $2,250,000,000 for the Deutsche Bank, $1,500,000,000 for the Disconto Gesellschaft, $1,100,000,000 for the Dresdner Bank, $450,000,000 for the Handelsbund Industrie, and the Commerzfund Disconto Bank $400,000,000. On the other hand, he estimated the deposits of the five leading English banks and their affiliations at $6,320,000,000, including the London City and Midland $1,570,000,000, Lloyds $1,500,000,000, Westminster $1,250,000,000. Barclay's, $1,100,000,000 and the Union of London and Smith's $900,000,000.

Sir Edward said that for obvious reasons deposits can be used more effectively if concentrated than if scattered. The German banks, he asserted, were preparing actively for post-war trade by mergers and affiliations.

Continuing his defence for mergers, Sir Edward reviewed trade and banking history. He said that for the first 80 years of the last century British foreign trade advanced from $340,000,000 to $3,485,000,000. During that period there were many bank failures. Then bank amalgamations commenced and there were few failures in the subsequent 20 years, and practically none since the turn of the new century. This, he declared, was all the more remarkable in view of the fact that trade expanded to $7,015,000,000 in 1913. For this expansion, banks strengthened by mergers provided necessary credit facilities without strain. The chairman also produced statistics showing that traders, and especially small traders, received greater accommodation after than before mergers. Furthermore, he pointed out, banking competition became increasingly keen through the opening of new branches.

FOUR MILLIONS IN VICTORY BONDS TO BE COLLEGE RRICE

There is every prospect of the big agricultural college deal with the Dominion government going through and the Manitoba government being relieved of an expensive institution that has lost a great deal of its usefulness since the war took all the farmers' sons.

The federal government needs such a building at the present time to supply hospital accommodation for the large number of invalided solders who are being returned to Canada, and representatives who examined it recently are of the opinion that with very little alteration the college can be turned into an up-to-date hosiptal.

The Hon. Edward Brown said that the province of Manitoba would get four million dollars' worth of Victory bonds bearing 5½ per cent. interest for the buildings, on which a quarter of a million dollars is spent annually, and the deal will make a great difference in the provincial balance sheet.

The city of Winnipeg has a surplus of power, while the Winnipeg Street Railway has not sufficient power and uses a great deal of coal. To save fuel it was proposed some time ago that the city should sell its surplus to the railway, but so far they have been unable to agree upon a price.

1918—VICTORY LOAN BULLETIN—1918

CAMPAIGN NOTES COMMITTEE REPORTS PERSONAL MENTION

The Editorial Department will be pleased to receive and publish each week items of news for this page.

LOAN SHOULD REACH HALF BILLION MARK

All over Canada at the present time, local organizations are at work preparing the ground for the Victory Loan sales campaign. The government wants $500,000,000. It is not definitely asking for so large amount, but that is what it wants. It is a tremendous undertaking, but the history of government loans since the war began, justifies such an expectation.

BUSINESS IN SMALL BONDS

Although, pending the flotation of the next Victory Loan, ordinary bond business in Canada is practically at a standstill as far as large transactions are concerned, the office staffs of at least some of the dealers are being kept pretty busy on account of customers who are either buying or selling bonds entailing small amounts, and particularly those running from fifty to one hundred dollars.

THRIFT CAN SAVE CANADA

Saving means national salvation, since the war cannot be won without money, the question is, how is it to be obtained? Canada can no longer get it through borrowing abroad. It must come from the people of Canada through their savings. National wealth is represented by the savings, rather than by the earnings of the people. The thrifty peasant saved France; thrifty Canadians can save Canada. The larger this class becomes the stronger our confidence in the future. Thrift defies adversity—it arms us against it.

NEW VICTORY LOAN TO RUN MORE EASILY

Radical changes brought about at the instigation of Canadian bankers have resulted in the great simplification of the method of subscribing to the new Victory Loan. When the lists are opened greatly improved facilities will be available for the public. There will be totally lacking the confusion caused by the issuing of interim certificates and the exchange into final scrip.

Canadian banking committees have been busy working out a scheme for the simplification of subscriptions, and as a result the minute the lists are open bond buyers can pay down the cash and receive their bonds without any delay. The engravers have been working on designs for the new Victory Loan bonds for some weeks, and before the subscription lists are opened full supplies of definitive debentures will be in the hands of chartered banks throughout the country. The method of purchase will thus be greatly simplified, as the bonds will be ready for immediate delivery to the purchaser.

VICTORY LOAN IN SASKATCHEWAN

A meeting of the provincial executive of the Victory Loan campaign for Saskatchewan was held in the campaign headquarters offices in Regina on September 19th, when representatives were present from all parts of the province. The meeting was held preparatory to the divisional organization meetings which commenced on September 20th, and for the purpose of arranging the dates at which the sub-divisional organization should be complete. All subdivisions should be organized, it was decided, not later than October 12th.

Saskatoon, Moose Jaw, and other points outside the capital, were represented. Saskatoon delegates included J. O. Hettle, S. W. St. John, R. P. Strickland, H. W. Lofft, and Sheriff Calder. The Moose Jaw representatives were: J. H. Kern, H. F. Stirk, A. W. Maybery and G. B. Baker.

Hon. C. A. Dunning, chairman of the provincial committee, presided, and among the Regina delegates present were the following: D. M. Balfour, vice-chairman; S. W. Harris, secretary; E. G. Read, assistant secretary; G. H. Sneath, W. E. Mason, J. Rodgers, A. F. Harwood, G. M. Bell, J. F. Bole, H. W. Givins and W. F. Kerr.

J. F. Bole, chairman of the publicity committee, who had just returned from a meeting of the chairmen of the provincial publicity committees of the Dominion, at Toronto, gave a comprehensive report of the meeting there.

It had previously been arranged that all divisional organization should be completed by September 28th. It was decided last evening that sub-divisional organization should be completed no later than October 12th.

READY TO FLOAT VICTORY LOAN

The minister of finance states that the plan adopted for the campaign for the coming Victory Loan has been discussed exhaustively by representatives of the Victory Loan organization from all parts of Canada, and settled upon as being the most efficient and economical method of handling the loan. A final analysis of the last Victory Loan shows that the actual cost of floating it, including payment of all organizing expenses, advertising, remuneration to bond and stock houses, and commissions to canvassers, was not much over one-half of 1 per cent., or, to be exact, .64 per cent. The other expenses were for the services of the chartered banks in receiving subscriptions, keeping accounts, delivering securities at their branches, some thirty-five hundred in number, throughout Canada, over a period of many months, and paying interest upon coupons, free of exchange during the entire period of the life of the bonds, and for the additional cost of administration in the department of finance, where a temporary staff numbering more than six hundred was engaged for months in connection with the work of the loan.

Following the course adopted last year, the minister of finance has practically commandeered for the purpose of the loan the services of the bond and stock exchange houses of Canada. This ensures the active co-operation of a large body of experts, who, through their experience in selling securities and the placing power which their organizations have developed, have rendered invaluable assistance in the floating of all previous war loans. From September 7th until early in December all investment houses are precluded from handling new issues and carrying on their usual business in order that their full energies may be devoted to the work of the loan.

Such recognized bond dealers and stock brokers as may be employed on the loan under authority of the Dominion executive committee will be reimbursed on the basis of their operating expenses for the time and the extent that they are actually engaged in the work.

In regard to official canvassers duly appointed under the authority of the several provincial Victory Loan executive committees, they are to be paid a commission at the same rate as in the last victory loan. This commission does not apply to subscriptions exempted by the special subscriptions committee, comprising amounts of $25,000 and over, in respect of which no commission is to be paid.

FOREIGN TRADE AND BANKING TENDENCIES

The August return shows that the foreign trade of the Dominion is still on the downward trend—exports for the month being $90,000,000 as against $146,000,000 in August, 1917; and imports being $79,000,000, as against $91,000,000 last year. The falling off in total trade is, therefore, about $69,000,000. Taking the five months of the fiscal year to August 31st, the total trade this year is $864,000,000, as against $1,128,000,000 in 1917; the decrease being $264,000,000, or nearly 24 per cent. The principal decreases are in the exports—agricultural products showing a decrease for the five months of $122,000,000, or 50 per cent.; and manufactures a loss of $92,000,000, or about 30 per cent. A comparatively light yield of wheat in Western Canada last year is partly responsible for the decrease in agricultural exports. Also, it is said that scarcity of shipping facilities has impeded the export movement. Gradual decline of the munition industry accounts for decrease of manufactured exports, the falling off in orders from Great Britain as yet being only in part offset by new contracts from the United States. The low estimates now being made of the 1918 wheat crop of Western Canada, point to further contraction of our agricultural exports; but if the bulk of the crop is rushed out before January, this factor of a small Western crop may not affect the trade returns importantly until the turn of the year.

Normally, when the foreign trade contracts sharply, the bank returns show contraction of liabilities and assets; railway earnings decline, and in other directions also contraction is in evidence. But on the present occasion the footings of the bank returns still show an upward tendency, and railway gross earnings show increases. As regards the latter phenomenon, it is pretty well understood that it is due to the increased freight rates. The March increase added 15 per cent. to the tariff of railway rates, and the August increase another 20 per cent., the general effect being to make the rates approximately 38 per cent. higher than those prevailing prior to March. But for these increases the gross earnings of the railways would have latterly shown consistent decreases, as the volume of freight at present moving is less than a year ago.

The expansion of the banking figures is largely due to the heavy borrowing by government. The large monthly credits on short date notes which the banks beginning in July have been granting to the minister of finance, exert a strong influence in the direction of expansion, as do also the credits granted to the Imperial Munitions Board on British treasury bills. As for the new war loan flotation, it will work in both ways. Probably it will produce banking expansion to a certain extent through the loans granted by banks to brokers and other subscribers to enable them to take up their allotments; and, on the other hand, a part of the savings and other deposits, transferred to the minister's account in connection with the Victory Loan payments, will subsequently be applied to pay off the government's temporary loans made in anticipation of the Victory flotation.

FUTURE OF CANADIAN IMMIGRATION

In our forecasts of Canadian conditions after the war it is almost invariably assumed that there will be a large immigration to Canada. This assumption, however, is open to question. It is expected that the immigrants would come from the British Isles, Europe and Asia, and to a lesser extent from the United States. The other British colonies, South America and the United States will be our principal competitors in the field. With the burden of an enormous war debt resting upon the shoulders of the principal European countries it may well be expected that they will make every effort to retain their citizens. In fact, Germany recently took action to this effect. If this is done and proves effective we may find very little immigration from Europe. The outflow from Asia will in all probability continue but it is doubtful if the United States and Canada and the other British colonies, subject as they all will be to heavy taxation on account of war expenditure, will be able to offer as great attractions as will the nations of South America, whose economic position has been vastly improved as a result of the war.

We have in the past over-estimated the volume of immigration more frequently than we have underestimated it, and it will be well, therefore, not to rely upon this seemingly easy method of repaying our war debt. As in the past, we will no doubt continue to grow in population and in industry but an invitation to come to Canada coupled with a request to repay part of our war debt will not, we think, be very effective.

A rapid immigration is not, in fact, desirable. Both Canada and the United States have already experienced the evil effects of large elements in the population which have not as yet been assimilated. In this respect the United States has suffered rather more than we have. In the future, however, the competition of the other British colonies with Canada for British population will be keen and there is a likelihood that European immigration will be attracted to Canada more than to the other colonies. It will be folly, therefore, to encourage or even permit of immigration greater than we can absorb. Our natural resources are assets to be disposed of only in return for a high standard of citizenship, and we should see to it that we do not receive the worst of the bargain.

ECONOMIC PROSPERITY AND NATIONAL LIFE

Speaking some time ago before the British Empire League in London, England, Mr. W. M. Hughes, Prime Minister of Australia, emphasized the importance to national preparedness of economic prosperity, and especially criticized Britain's pre-war policy of *laissez-faire.* "The thing that matters," he said, "above all other material things to the people of Britain, of the Empire, and of our Allies, is that they shall be, and shall remain, economically independent of Germany after the war." Mr. Hughes' speech was decidedly combative, as British speeches go. He said that he had advocated compulsory service as early as 1907, and he apparently aims at a unified political and economic system composed of the British Empire, or of the Empire and its allies.

We think that Mr. Hughes has over-emphasized the importance of wealth and industry in political greatness. Certainly these are vital factors, but there are other elements which are essential. No doubt, from the point of view of military strength, there is nothing like population, industry, and wealth. But if this is a war to end war, and we are to have an effective peace league, why should we recast our economic life with a view only to further conflicts? To do so will be to acknowledge the truth of Germany's interpretation of political life, and surrender the ideals for which we struggle. In 1914, we decided that a nation of this kind was a cancerous growth which should be cut out from the family of nations.

Do we wish to isolate Germany industrially as well as politically? There is much to lose and little to gain by a policy of this kind. It would force Germany into its old position of armed preparedness, and confirm its belief in the necessity of forcing its goods upon the world by the potential force of armed power. Economic motives of gain would continually pervade our barriers of tariff, embargo, and trade agreement, and they would at most be only partially effective. If, when terms of peace are discussed, we find there is no prospect of an effective league of peace, that will be the time to resort to an attitude of preparedness, not only in arms, but also in industry.

FARM CONDITIONS IN ONTARIO

The following is a summary of reports made by agricultural representatives to the Ontario Department of Agriculture:—

Kent reports that farmers are busy husking corn, and that some claim they have each secured fully 2,000 bushels of seed corn, mostly White Cap, while others have a considerable quantity of Wisconsin. Norfolk describes some varieties of Southern corn as standing fourteen feet high. Silo corn is now being cut in many counties both east and west. The yield per acre is better than was expected early in the season, and most silos will be fairly filled.

Potatoes are being dug, and odd complaints of rot among late varieties are coming in, as the ground has been very wet for some time.

The Brant representative says that early turnips are being shipped from that county at from 30 cents to 35 cents a bushel, and that prices will likely remain high this year, owing to the smaller general acreage. Both turnips and mangels are still growing vigorously.

Brant also reports a big increase in the acreage of red clover retained for seed this season, as, wherever possible, most farmers have saved the crop for that purpose.

Fall wheat has been much delayed in sowing by the wet condition of the ground. If the weather clears soon a considerable acreage may yet be added to that already in, some of which is now showing above ground, and looks promising. There has been an increased demand for seed lately.

Cattle are looking well, as September pastures have been lush. Oxford reports some grass-fed cattle going on the market, while Halton states that a number of carloads of feeders are being brought in.

The supply of milk has improved with the pastures. Chesterville condensory is reported as paying $2.35 a hundredweight for September milk.

Hogs are selling at from $18.75 to $19.50 a hundredweight. Dufferin states that reports would indicate a heavy run of hogs in the next month or so.

The outlook for the winter feeding of live stock is fair, with the large supply of coarse grains on hand. Hay, however, is scarce, and is increasing in price. While straw is comparatively short in length, it is, as a rule, of excellent quality for chopping and feeding, and the area grown to cereals this season was about 200,000 acres more than that of the preceding year. The silos also will be better filled than they were last season.

Farmers are too busy thrashing, plowing, wheat planting, potato digging, corn cutting, etc., to do much marketing of grain. Some of the abundant crop of oats has been sold at from 70 cents to 76 cents a bushel. Seed wheat is selling at $2.50 in Peterboro, and hay at from $18 to $20.

While farmers are very busy, the demand for laborers is not correspondingly keen, chiefly because arrangements for help had been made in most cases well in advance, and also, as one representative puts it, because there is little use in applying so late in the season. The extension of harvest leave to soldiers to cover the greater part of fall work is an additional reason.

The price which the Montreal Light, Heat and Power Company has offered to supply the city of Montreal with electric current for half of the pumping station requirements is said to be $25 per horse-power per annum. It is estimated that if half the plant is electrified, about 3,000 horse-power would be required, which would mean $75,000 per annum to the power company.

INVESTMENTS AND THE MARKET

News and Notes of Active Companies—Their Financing, Operations, Developments, Extensions, Dividends and Future Plans

Montreal, Light, Heat and Power Company.—Earnings of the company for August and four months of current fiscal year, from May 1 to August 31, display the same progressive tendency as has been the case for months back. The gross for August is $844,457, a gain of $61,045. After operating expenses are deducted a net of $440,024 remains, an increase of $19,584. The gross for four months shows a gain of $328,207 over the same period in 1917. The surplus for that period is $1,414,517, or an increase of $87,177.

Shawinigan Water and Power Company.—The company is prepared to meet its $2,500,000 two-year five per cent. notes which mature October 1st, and payment will be made at the New York Trust Company, according to announcement made on September 25th. After that date the company will have $4,500,000 two-year six per cent. notes outstanding, which mature in December of next year. This issue is convertible into common stock and has already been reduced to the extent of more than $500,000 by conversions.

Mining Corporation of Canada.—At the general meeting of shareholders held in the Ophir Company's office on September 6, 1918, the agreement with the Mining Corporation of Canada was unanimously ratified, there being over 960,000 shares represented out of total issued capital of 1,346,000 shares. The main provisions of the agreement are as follows: The Mining Corporation has an option on an undivided two-thirds interest in the Ophir Cobalt property for $150,000. They agree under their option to spend not less than $2,500 per month on development work and to apply any values recovered from the property on account of the purchase price paid in full. The first payment under the option is due in six months from date of the agreement.

Montreal Tramways Company.—The surplus account of the company was drawn on to the extent of $303,991 to meet charges and other deductions, including three quarterly dividends, in the fiscal year ended June 30th, according to the financial statement, to be submitted to the annual meeting of shareholders on September 27th. That compares with credit balances of $77,473 a year ago, $111,422 two years ago and $124,900 three years ago, when, in each case, dividends for the full twelve months, instead of for nine months, were paid. Beyond this, little can be adduced in the way of comparisons with previous performances of the company, because of the changed form in which the figures are presented. The deficit of upwards of $300,000 testifies to the need of the relief recently granted to the company through the provisions of the new contract with the city and the rate increases ordered to implement the terms of that contract.

Ogilvie Flour Mills Company, Limited.—Directors of the company on September 20th declared a bonus of 15 per cent., along with the regular quarterly dividend of 3 per cent. on the common stock. The payment will be made October 1 to shareholders of record September 27. The extra payment of 15 per cent., which goes with the regular dividend for the final quarter of the company's fiscal year, is the same as disbursed this time a year ago, with the final dividend for 1916-17. As the regular dividend has been 12 per cent. per annum, instead of 10 per cent. in the previous year, the total distribution for the 12 months amounts to 27 per cent., against 25 per cent. In 1915 the company paid 8 per cent. in regular dividends, with a bonus of 4 per cent.

Profits from the company's many activities outside of flour milling are known to figure as an important factor in present dividends. Of 1916-17 profits of $1,358,847, the sum of $6[illegible] was credited to sources other than milling. The company, for instance, has a chain of elevators across the continent, with one at Fort William which ranks among the largest in the world. Many of these outside activities were made possible by shareholders' willingness to accept small dividends for many years, while surplus profits were being reinvested in new plants of one kind and another. The benefits of the management's policy and the shareholders' patience are evident in the larger disbursements of the past few years.

NEW INCORPORATIONS

The Gold Lake Mining Company, With Capital of $1,000,000, Received Charter

The largest company incorporated during the past week was the Gold Lake Mining Company, Limited, with a capital stock of $1,000,000 and head office in Toronto.

The following is a partial list of charters granted during the past week in Canada. The head office of the company is situated in the town or city mentioned at the beginning of each paragraph. The amount noted is the authorized capital, and the persons named are the provisional directors:—

Nelson, B.C.—Kaslo Concentration Works, Limited, $75,000.

Amherst, N.S.—Cedar Products, Limited, $500,000; F. L. Milner, H. A. Purday, J. H. Freeman.

Three Rivers, Que.—Tidewater Realties, Limited, $200,000; J. W. Norcross, H. W. Cowan, F. P. Smith.

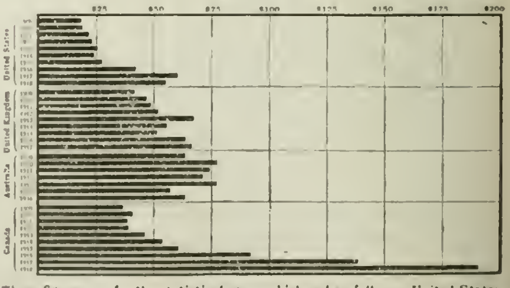
Vancouver, B.C.—Economy Meat Company, Limited, $100,000; Surrey Oil Company, Limited, $300,000; Shatford-Stevens, Limited, $10,000; South Vancouver Shingle Company, Limited, $10,000; Columbia Iron and Steel Company, Limited, $25,000; Crawford Storage and Distributing Company, Limited, $10,000; Cats Mining Company, Limited, $10,000; Vancouver Cooperage Company, Limited, $25,000.

Toronto, Ont.—Automotive Transports, Limited, $250,000; B. E. Bull, J. Montgomery, R. Watson. Dundas Oil and Gas Company, Limited, $500,000; A. Levitt, M. Levitt, N. H. Callery. Farmers' Publishing Company, Limited, $500,000; J. Z. Fraser, J. N. Kernighan, A. A. Powers. Gold Lake Mining Company, Limited, $1,000,000; H. H. Shaver, C. W. Livingston, E. T. Coatsworth. Truck Transport Company, Limited, $200,000; R. H. Parmenter, A. J. Thomson, S. D. Fowler. Toronto Athletic Club, Limited, $50,000; H. Brock, W. H. Merritt, J. Galloway.

Montreal, Que.—Transactions, Limited, $20,000; H. S. Aamat, L. Morin, E. Godbout. Senneville Development Company, Limited, $20,000; E. W. Westover, E. G. Palce, G. W. Rowell. Oliver Motors, Limited, $20,000; C. J. Ogden, L. J. L'Heureux, Lewis-S. Jaslow, Incorporated, $20,000; R. Chenevert, A. Moisan, J. Kellert. Patents Development Company, Limited, $10,000; H. Langevin, C. Holdstock, R. Gauthier. Union Engine and Machine Works, Limited, $300,000; W. R. L. Shanks, F. G. Bush, G. R. Drennan. Paris Store, Limited, $25,000; G. L. Alexander, A. Burnett, H. J. Murphy. Canadian Patent Hat Lining Company, Limited, $20,000; M. Goldstein, M. Bernfeld, J. B. Taylor.

EXPORTS OF DOMESTIC MERCHANDISE

The accompanying comparative chart is taken from the September Monthly Commercial Letter issued by the Canadian Bank of Commerce, and illustrates in rather a striking manner the remarkable development which has characterized Canada's foreign trade. The figures do not include coin and bullion.



These figures are for the statistical years which end as follows: United States, June, United Kingdom, December, Canada, March; Australia, December up to 1913, and after that date, June, the figures for the broken period January-June 1914 are not represented in the chart.

DIVIDEND NOTICE

The Bank of British North America

Incorporated by Royal Charter

The Court of Directors hereby give notice that an interim dividend for the half year ended 31st May last, of Forty Shillings per share, less Income Tax, being at the rate of eight per cent. per annum, will be paid on the 5th day of October next to the Proprietors of shares registered in the Dominion of Canada.

The Dividend will be payable at the legal par of exchange on the 5th day of October next.

No transfer can be made between the 21st instant inclusive and the 4th proximo inclusive, as the books must be closed during that period.

JACKSON DODDS,
Secretary.

No. 5 Gracechurch Street,
London, E.C.

5th September, 1918.

The Molsons Bank

152nd DIVIDEND

The Shareholders of The Molsons Bank are hereby notified that a Dividend of TWO AND THREE-QUARTERS PER CENT. (being at the rate of eleven per cent. per annum) upon the capital stock has been declared for the current quarter, and that the same will be payable at the office of the Bank, in Montreal, and at the Branches, on and after the

FIRST DAY OF OCTOBER NEXT,

to Shareholders of record on 15th September, 1918.

THE ANNUAL GENERAL MEETING

of the Shareholders of the Bank will be held at its banking house, in this City, on MONDAY, the 4th of NOVEMBER next, at three o'clock in the afternoon.

By the order of the Board,
EDWARD C. PRATT,
General Manager.

Montreal, 21st August, 1918.

LIFE INSURANCE, BANK CREDITS AND THRIFT

Have Done More For Industry Than Any Other Powers—The Trade of the Small Manufacturer Has Expanded Through Their Help

"It is the fashion of certain demogagues to speak of bankers and of insurance men as non-producers, but not even the powers of steam and electricity have done more for industry than credit and insurance," said Sir Edmund Walker, C.V.O., LL.D., D.C.L., president of the Canadian Bank of Commerce, in his address before Life Underwriters at the First International Convention held in New York on September 4, 5 and 6. "In the middle ages," he continued, "the provision for old age or for a dependent family, when the citizen could make any, was generally a hoard of coined money, or some jewels, and sometimes a holding of real property. The artisan who could save nothing must hope that his guild would look after his family, while the ordinary laborer had his only chance in being attached to some great landed estate. The small manufacturer or shopkeeper could not borrow to expand his trade and lived ever open to the risks of fire and of violence. Other things have helped to improve these conditions, but none have done more than banking and insurance. From the moment when a credit established by a bank enables a grain dealer on this side of the Rocky Mountains to buy a farmer's grain, its insurance begins and never stops until the consumer has received his loaf of bread from the baker in Europe. It covers fire at any point in store or transit, all other risks on sea and land, and the fluctuations in the market price, for to the non-speculator his hedge is just an insurance policy. If the wheat is grown where there is no option market within reach, and no chance of selling ahead of delivery, the buyer becomes a speculator and his supposed margin of profit must be much larger, while his credit with his bank must be very much smaller and on an entirely different basis from that of the dealer who covers every risk by insurance."

Must be Acquainted with Insurance.

"A good banker," he said, "must be well acquainted with the laws and conditions of all forms of insurance, not merely ordinary fire and marine risks, mill and factory insurance, hail and war risks, life and accident insurance, but what constitutes a good risk in the experienced mind of an insurance expert. A good banker will fight shy of a customer who cannot offer a good risk, whether it be a factory, a ship or a life. The application of steam to ocean and land travel, the development of electrical and water power, the use of the cable and the code, the amazing results of the cheque system and the clearing house, the growth of the saving habit as represented by bank deposits, and the enormous loans made possible thereby in aid of industry have made the modern world wonderful beyond the dreams of any economist of past generations, but at every turn these vast operations are protected and made possible by the various forms of insurance."

"Wonderful as are the various forces, however, which man has made available for his purposes, there is still no force so useful, so unique and so precious as the capacity of man himself. We create universities for the education of our youth, joint stock corporations for finance and trade, gigantic railroad systems, armies, navies and many other forms of co-operation, but each of them needs one chief, and most of them many other executive officers, with a capable and loyal staff of workers. This is the asset which never appears in the balance sheet of a company, and yet is of more importance than plant, merchandise, cash in bank, good-will, or any other asset. So far as the man at the very top is concerned, he is generally found in the position of a circus rider, who has the reins of six or a dozen horses in his hand, all of which he must make run easily together, and this, perhaps, at a time of life when to relax from constant vigilance would be agreeable if it were only possible.

Economy a Fine Art.

"What we can most profitably consider is what life insurance can do for those who are not pleasantly engaged in making money, but who are working for a wage or salary in the effort to help others to make money. It is not merely that the certainty of some provision in case of early death removes the most fearful of the anxieties of life; or that certain forms of insurance provide help in time of sickness or pay the doctor, or the expenses of burial; or that a pension for old age—a rarer form of insurance—can be obtained; it is rather the effect of compulsory saving on many who only learn because of the peremptory premium renewal date, to put by for a rainy day. In North America, unfortunately, economy to most people is another name for stinginess. From the kitchen to the drawing-room the idea prevails that profusion is a sign of cultivation, whereas, the hatred of waste is the main thing which separates civilized man from the savage, and that side of us which enjoys the waste of profusion is the uncultivated side. Economy properly understood is a fine art, and is as rare as most of the fine arts. Of the various co-operative efforts of man to aid industry, and, therefore, to avoid waste, the honestly managed life insurance company is the finest example. It helps to mitigate the greatest trouble, death; it teaches people to apprehend and provide for other dangers; it multiplies their savings by its investments; it renders its beneficial provisions possible by spreading the cost of the individual disaster over the many who co-operate. It even improves the general health of man by its study of his life medically and by the wise conditions it imposes.

The Question of Profits.

"When the war is over we may have to face troubles regarding the constitution of society such as we have never encountered before in America. The outcome should not depend upon the attitude of labor alone, but if it does and the counsel of the same labor leaders does not govern, the results may appal us. The result can be enormously influenced and better relations can perhaps be permanently established by a common ground being reached in some matters between the employer and those employees who are not revolutionary in tendency. This common ground, however, can only be reached by a change in the attitude of the majority of employers. Perhaps the main point at issue is: to whom does the profit in an industrial enterprise belong after providing for the cost of raw material, the rent, or interest on cost and the depreciation of factory and plant, the cost of management and of labor, the normal return on capital or the interest on borrowed money, and any other proper items of cost?

"A certain type of capitalist will say that it clearly all belongs to him because the enterprise is his, while some labor leaders will claim just as positively that it belongs to labor because without it the enterprise could not proceed. If any part whatever of this profit, based on a wide and liberal construction of that new system of economy measured by the unit of a man rather than by the unit of a dollar, belongs to the workingman, it should be conceded by the employer and not be reserved until it is obtained by the force of strikes or by other violence. If anything is due on ethical, although not on legal grounds, it should be granted as something due, and not as a gracious act for which the giver expects to be accounted a benefactor. Gratitude is a rare quality even when it has been earned, and we need not expect it when it is asked as a reward for doing what the recipient, at least, regards as a duty.

Pension Fund is Beneficial.

"Out of this profit the cost of two main items—the one, insurance against old age, disability and death; the other, better conditions of living—should be borne, and I am emboldened to say this because many large and most successful employers admit the argument and act upon it. When in a bank or other business establishment, or in a government service, a pension fund is established, it is generally based on the supposition that after a man has reached full manhood, say, at the age of 25, he should, during 35 years of work, ending at the age of 60, be able to save enough to take care of his family in the years when he cannot work, and that, in addition, there should be provision in case he dies or breaks down earlier. In such schemes the fact that the employee seems to pay only a part of the cost, while the employer pays the balance, is misleading, because the part paid by the employer is only salary withheld from the employee in order that it may be applied to such a pension and life insurance scheme. So long as labor is bought in a market of fierce competition and the individual workman shifts from shop to shop, influenced almost altogether by the wage alone, he is not, as a rule, able, and in any event is not usually provident enough to make provision for his old age. Where labor troubles have been very bad the state may have forced the establishment of pension schemes undef pressure from the labor unions, but in the opinion of advanced students, who can hardly be accused of bias, what is necessary is that the employer should realize that it is his duty to arrange for enough of every man's pay to be directed to such a fund. If this involves paying away a portion of what in the past he has quite legally regarded as his profit, it merely means that we have arrived at a more just conception of our duty to each

AN ALLIANCE FOR LIFE

Many of the large Corporations and Business Houses who bank exclusively with this institution, have done so since their beginning.

Their banking connection is for life—yet the only bonds that bind them to this bank are the ties of service, progressiveness, promptness and sound advice.

236 Branches in Canada, extending from the Atlantic to the Pacific

New York Agency: 63 and 65 Wall Street

Bankers in Great Britain: The London Joint Stock Bank, Limited; The Royal Bank of Scotland

37

other, moving toward that more perfect state of society to which we are aiming. The other duty rarely performed is that of providing proper housing for workingmen. If a new industry is established in the country instead of in a manufacturing city, the capitalists who create the venture know that they must provide houses if they seek to attract workmen to the site they have chosen. Very often this is done in the finest spirit, but usually it is done as a necessary business expedient rather than as a duty.

Life Insurance Essential in World's Crisis.

"The democracies of the world," said Sir Edmund in conclusion, "have before them the task of destroying militarism and of creating such a system of international law as may insure liberty and the chance to be happy in a reasonably just world. The great movements which should follow the defeat of militarism can only succeed if they are led by the English-speaking people of the world—the people of the greatest republic and of the greatest empire. In anticipation of these efforts and of the happy effect upon our childrens children if we are successful, shall we not be wise to be first assured of the safety and permanence of our own social systems? If we are reasonably sure that we are to have a just condition of society—one that will not kill the individuality of the creators of industry, those captains of enterprise who are the foundation of our business activity—and are to be liberal and fair to labor, even though we may not meet the present claims of its extreme leaders, we may confidently march together in the greatest task men have ever essayed, the establishment of a league of nations which, while loving and seeking peace, will be prepared and pledged to enforce justice throughout the world. No business institutions in our society can do more toward this end than the life insurance companies and their armies of agents in the field."

AUGUST BANK RETURNS

The bank statement of the finance department has not yet been issued, but the totals were announced on the 25th inst. Savings deposits and circulation have made further increases of $13,000,000 and $22,000,000, respectively. The total of savings deposits is now $1,014,711,865, which is a high record for Canadian banking; the one billion mark was exceeded only once before, in December, 1917. Demand deposits have also increased by about $6,000,000. The total liabilities increased by about $42,000,000 as compared with July.

Holdings of Dominion and provincial government securities are now $179,039,711, or $36,000,000 more than last month. Current loans and discounts have increased materially, now totalling $1,022,326,815. Another notable feature of the August statement is the amount of $4,000,000 recorded as loans between Canadian banks, including rediscounts.

The following table shows the principal items for August, giving the changes for the month:—

	Aug., 1918.		Changes during Aug., 1918.
Reserve fund	$ 114,141,248	+	$ 1,100
Note circulation	200,830,660	+	12,973,827
Demand deposits	554,906,517	+	5,837,866
Notice deposits	1,014,711,865	+	22,606,728
Total deposits in Canada	1,569,618,382	+	28,534,594
Deposits outside Canada	220,124,417	+	4,120,613
Current coin	75,222,384	—	1,355,882
Dominion notes	186,256,488	—	263,684
Deposits, central gold reserve	91,470,000	+	2,600,000
Call loans in Canada ..	73,509,571	—	873,191
Call loans outside	160,544,090	—	6,567,846
Current loans in Canada	920,775,269	+	15,098,036
Current loans outside	101,551,546	+	1,848,627
Total liabilities	2,169,482,583	+	41,664,049
Total assets	2,423,466,887	+	43,054,230

The detailed statement will appear in *The Monetary Times* next week.

One item of business to be transacted at the first meeting of the recently appointed board of directors of the Canadian Northern Railway system on September 27th, will be the election of an executive committee. That committee will consist of the president, D. B. Hanna, Graham A. Bell, deputy minister of railways, A. J. Mitchell, and probably two other directors. The executive committee will thereafter meet weekly to carry on the ordinary business of the road. The whole board of directors will meet monthly.

PERSONAL NOTES

MR. S. BARRETT, township clerk of Etobicoke, Ont., has been appointed fuel commissioner for that municipality.

MR. A. W. ROBERTSON, contractor of Montreal, has joined the board of directors of the Capital Trust Corporation, Limited, Ottawa.

MR. F. G. TIPPING, president of the Winnipeg Trades and Labor Council, resigned his position as head of that body at a meeting held on September 19th.

MR. J. W. MOFFET, who for years has managed the operation of the Beaver Consolidated Mine, has found it necessary to tender his resignation owing to ill-health.

MR. J. J. MCFADDEN, the well-known lumberman of Renfrew, Ont., has joined the directorate of the Capital Trust Corporation, Limited, Ottawa.

MR. GALEN L. STONE, of Hayden, Stone and Company, Boston, has been elected a director of the Nova Scotia Steel and Coal Company, to succeed the late N. Bruce MacKelvie.

DR. M. C. COSTELLO, mayor of Calgary, spent the past week in Toronto and Montreal. While in the east he made delivery of the city of Calgary bonds, the sale of which was negotiated some time ago.

MR. G. A. KINGSTON and MR. T. NORMAN DEAN, of the Ontario Workmen's Compensation Board, left on September 22nd, to attend the convention of compensation leaders to be held in Madison, Wis.

SIR ARTHUR HARRIS, who has been acting since 1916 for the Canadian government as director of overseas transport, has now been made director-general of the British Ministry of Shipping for Canada.

MR. J. MCNEIL FORBES, who for some time has been acting in a consulting capacity for the Reid Newfoundland Railway, has been appointed to develop the natural resources of that company's properties.

MR. J. A. ELLIS, formerly the legislature's member from West Ottawa and also formerly mayor of that city, has been elected a member of the Ontario Railway and Municipal Board in the place of Mr. Kittson, who resigned some time ago.

MR. GEO. A. KINGSTON, commissioner from Ontario, was elected president for the ensuing year of the International Association of Industrial Accident Boards and Commissions, at the fifth annual convention held in Madison, Wis., this week.

MR. D. C. JACKLING has been elected president of the Butte and Superior Mining Company. Mr. Jackling has been managing director of the property and as such has worked in close harmony with his predecessor in the presidency. He was elected a director of the Nova Scotia Steel and Coal Company a few months ago.

MR. JOHN APPLETON, secretary of the Dominion Mortgage and Investment Association and Mr. W. G. Styles, of Regina, of the executive committee of the Land Mortgage Companies' Association of Saskatchewan, addressed the National Convention of the Farm Mortgage Bankers' Association of America held in Kansas City, Mo., September 17, 18, 19.

MR. J. M. SPENCE, president of the Alberta Life and Accident Insurance Company, died suddenly of paralysis on September 15th, at the family residence, 831 Fourteenth Avenue West, Calgary. Mr. Spence was a well known and highly respected citizen of Calgary, having lived there for about six years. He was active in the insurance business for upward of 25 years, and organized the Alberta Life and Accident Insurance Company, shortly after coming west ten years ago, when he settled in Edmonton.

MR. ANDREW J. DAWES has been elected a director of the Windsor Hotel Company, of Montreal. The election of Mr. Dawes fills the vacancy on the board left by the death of Charles Cassils. Mr. Dawes is well known as the president of the National Breweries, Limited, and is also a director of the Merchants Bank of Canada, the Bell Telephone Company of Canada, the Northern Electric Company, the National Locomotive Company, Ottawa Traction, the London and Lancashire Life Insurance Company and other corporations.

ONTARIO MUNICIPAL LEGISLATION OF 1918

Review of Legislation Affecting Municipal Industry and Finance—Points of Interest to Municipalities Outside Province

Speaking at the recent convention of the Ontario Municipal Association, Mr. W. B. Doherty, city solicitor, of St. Thomas, reviewed the acts of the Ontario legislature during 1918 in so far as they affect municipalities.

"Notwithstanding the fact," he said, "that the last session of the legislature was one of the shortest in the history of the province, a large amount of legislation was placed upon the statute books, the volume for the session of 1918 containing almost 600 pages. Much of this legislation directly affects all of the municipalities within the province, some of which is of a somewhat radical character. Other parts deal with questions that have been brought about by the war and again there are other measures which directly affect only those municipalities to which they relate, but which are of considerable interest to other municipalities of similar size and responsibility."

Mr. Doherty then dealt with the legislation under a number of heads, some of which follow:—

The Municipal Amendment Act.

"In considering the changes in the general law of the province those made by the Municipal Amendment Act naturally attract first attention.

"One of the most important amendments that have been made to this act, is the addition of section 53 (a), which refers to the disqualification of members of municipal councils. Section 53, the disqualification section, as it formerly stood, provided that the following persons should not be eligible to be elected members of municipal councils, that is to say, an assessment commissioner, assessor, a collector of taxes, a treasurer, a clerk, or any other officer, employee or servant of the corporation of a municipality.

"By the amendment of last session it is now declared that the words "officer, employee or servant," shall include a commissioner or a member of any commission or other body appointed by the council and that such commissioner or member shall not be eligible to be elected as a member of the council.

"The result of this amendment is, that no member of a commission, or other public body appointed by the council, can hereafter be a member of the council, or, in other words municipal councils can no longer appoint members of their own body on other public boards, but such appointments must be made from persons outside of the council. This applies to all commissions, hospital boards, local boards of health, and in some cities to railway and other boards managing local institutions in the municipality.

"The advisability of this amendment is open to serious question. Most if not all of these outside bodies have to be financed by the municipality, and the funds necessary to meet their expenditures have to be provided and raised by the municipal council, and speaking generally it is the council and not the outside body that the average elector looks to and holds responsible for increased expenditure and a higher tax rate. It would seem therefore but fair and reasonable that as the council has to raise the money, and be responsible to the people for it, its members should have some voice in deciding how this money is to be expended, and a member of a council who is directly responsible to the people, and must yearly give an account of his stewardship, is more likely to exercise care and caution in the expenditure of public moneys that one who has no such responsibility.

"However, opinions differ on this point, and it will be interesting to note how the amendment works out in practice, and whether it will be any improvement or otherwise, either in the public service or in cost to the public, over the system which has prevailed until now. Conditions arising from the war are responsible for new legislation relating to the weighing of coal and coke, and the measuring of firewood, but it is legislation which has been sadly required for a long time.

"For some reason the only authority given a municipality in the past to pass a by-law respecting the weighing of coal or the measuring of wood, was contained in what is known as the market clause of the Municipal Act, and there has always been considerable doubt in the minds of municipal lawyers as to whether a municipality could interfere with or regulate the sale, weighing and delivery of coal and wood outside of the market places. For this reason few municipalities undertook to pass a by-law providing for weighing of coal sold by local dealers from their own private yards, and then only when required by the purchaser and at his expense.

"The recent legislation authorizes municipalities to purchase and operate weighing machines, to appoint weigh masters and prescribe their duties, and to impose fees for the use of these machines. And with the approval of the municipal board to require all persons selling and delivering coal or coke within the municipality from any coal yard, chute, gas house or other place, to have the vehicle and the commodity weighed before delivery, at a public weigh scales, and a ticket furnished to the purchaser containing the name and address of the vendor, the name of the purchaser and the weight of the commodity.

"Cordwood or firewood (except kindling or mill cuttings) offered for sale or sold on the market is to be measured, and a similar ticket furnished to the purchaser. Every person selling or delivering cordwood elsewhere than on the market, shall surrender to the purchaser when making delivery, a ticket signed by the vendor, containing his name and address, the quantity of wood delivered in cubic feet and the price at which the same has been sold.

Insurable Interest in Court Houses and Gaols.

"For years the corporation of a county, city or separated town has had insurable interests in the county court house and gaol, and had had the right to insure its interest in the proportion in which it was, for the time being, liable to contribute for the erection and maintenance of such buildings, under the provisions of section 379 of the Municipal Act. This section (381) of the act is now repealed and a new section substituted, by which these corporations are now declared to have insurable interests in the buildings, not as formerly for what they were liable, but in the proportions of the aggregate amounts which they have contributed to the costs, charges and expenses of erecting, enlarging, improving and repairing the buildings; and also insurable interests in the contents and furniture of the court house and gaol in the proportions of the aggregate amounts which they have contributed, respectively, to the costs, charges and expenses of providing such contents and furniture.

Money By-laws for Waterworks and Sewers.

"Section 288 of the Municipal Act has been amended by the addition of a clause providing for the approval of the Provincial Board of Health shall be recited in every money by-law for raising money for any of the purposes mentioned in sections 89 and 94 of the Public Health Act, that is for the construction or enlargement of waterworks and sewer systems. This, however, has been the law since 1912, the Public Health Act of that year requiring this approval to be set forth in the money by-law.

The Statute Labor Act.

"In cities, towns and villages every male inhabitant over 21 and under 60 years of age, not exempted by law from performing statute labor, and not assessed on the assessment roll, shall instead of such labor, be taxed yearly at not less than $1 or more than $5, to be levied and collected as the council may by by-law direct.

"It is also now provided that where any such male inhabitant has been employed by the same person for not less than 30 days, the employer shall pay the collector on demand the amount of the employee's tax, and may deduct the same from his wages. A township may take advantage of this amendment by passing a by-law for this purpose.

The Vacant Land Cultivation Act.

"This is another act, the necessity for which has arisen from war conditions. Under this enactment by-laws may be passed by the councils of cities, towns and villages for entering upon, holding and using for the purpose of cultivating and raising crops thereon, any vacant land in the municipality during the continuance of the war, and for selling and disposing of the produce thereof.

"The council may grant a permit to any person to enter on and use vacant land for such purpose, and may regulate the kind of crops to be grown, but before granting such permit, the council must fix a time for hearing objections by the owner, and must give him notice of the date of such hearing, but the length of the notice is not specified. Land required for building, manufacturing or other revenue producing purposes during the year is not to be taken; and no compensation is to be paid to the owner for the use of the land.

"The Navy League and the National Council of the Young Men's Christian Association of Canada, have been added to

CROP ACREAGE ESTIMATE

Most Crops Average Below Last Year—Estimates of Yield Not Yet Prepared

The Dominion Bureau of Statistics reported on the 18th inst. its preliminary estimate of the average yields per acre of the principal grain crops in Canada, the condition of field crops, the areas unproductive and the stocks of wheat, barley and oats in farmers' hands, as compiled from the reports of crop correspondents on August 31st. The preliminary estimate of the total yields of grain, usually issued at this date, is deferred pending completion of the compilation of the returns of areas sown as collected jointly throughout Canada by the Dominion and provincial governments.

Average Yields Per Acre.

For the whole of Canada in 1918 the average yield per acre is estimated at 16½ bushels for fall wheat, as compared with 21½ bushels last year, and 23 bushels, the ten-year average for 1908-17. For spring wheat the average is 12½ bushels as compared with 15½ bushels last year and 19 bushels, the decennial average. For other grain crops the respective averages are, in bushels per acre, as follows: Oats 33, as against 30¼ and 35¼; barley, 25½, as against 23 and 27; rye, 16¼, as against 18¼ and 18¼; flax 8, as against 6½ and 10½. For the prairie provinces the estimated average yields per acre for 1918 are as follows, the yields for 1917 and for the ten-year period (1908-17) being placed within brackets: Manitoba: Wheat, 17 (16¾, 17¾); oats, 38¾ (30¼, 35½); barley, 29¼ (22½, 25¾); rye, 18¼ (17¼, 18); flax, 11¾ (9, 11½). Saskatchewan: Wheat, 11½ (14¼, 18½); oats, 31½ (37¼, 38¼); barley, 22½ (21, 26¾); rye, 15 (18¾, 20¾); flax, 8½ (6¼, 10½). Alberta: Wheat, 10 (18¼, 22½); oats, 23¼ (34, 42); barley, 16¾ (22, 28¼); rye, 15¾ (20½, 23½); flax, 5¼ (7, 10½).

Condition of Other Field Crops.

The condition of other field crops in Canada on August 31st, measured against 100 as representing the average decennial yield, is as follows: Mixed grains, 100; peas and beans, 106; buckwheat, 91; corn for husking, 87; potatoes, turnips, mangolds, etc., 95; corn for fodder, 96; sugar beets, 94; pastures, 87.

Areas Unproductive.

In consequence of drought and the severe frosts of July the areas in the three prairie provinces and in British Columbia that will fail to produce grain crops are exceptionally large. Crop correspondents were requested to estimate at the end of August the percentage of areas sown that would (a) prove a total loss, and (b) that would be cut green. The returns show that for all four provinces 13 per cent. of the area sown to wheat will be a total loss, whilst 13 per cent. will be cut green, the area not producing grain being, therefore, 26 per cent. For oats the percentages are: 8 total loss, 15 per cent. cut green, 23 per cent. not producing grain; for barley, 6 per cent. total loss, 7 per cent. cut green, 13 per cent. no grain; for rye 10 per cent. total loss, 7 per cent. cut green, 17 per cent. no grain; for flax, 14 per cent. total loss.

Stocks of Wheat, Barley and Oats in Canada.

Enquiries made by the bureau show that about 4,000,000 bushels of wheat, 1,453,500 bushels of barley and about 15,[illegible],000 bushels of oats remained in stock in Canada at the end of the Canadian crop year on August 31st. For wheat, the quantity estimated as in farmers' hands is about 4[illegible],000 bushels, of barley [illegible]14,000 bushels, and of oats [illegible],500,000 bushels, the balance in each case being in the terminal, public and country elevators. The quantities do not include grain in transit nor grain in flour mills or retail hands. The returns from crop correspondents are remarkable as indicating an almost absolute clearance by farmers of their stocks of 1917 grain, especially as regards wheat and barley.

PROFIT SHARING BY EMPLOYEES

BY A. T. DRUMMOND, LL.D.

The remuneration of the workers in industrial establishments is, as a rule, based on what other industries pay for similar work. It is only within recent years that the important part which it is possible for skilled workmen to take in helping to maintain the reputation of the undertaking, and to build up its profits, has been specially recognized by giving to them, in addition to their wages, some share in the profits, along with the shareholders or partners in the enterprise. In numerous instances, efforts have been made to develop a workable plan, and many have been the failures. Some were too complicated for the average man to understand, others taxed his patience for too long a time before the division of profits took place, whilst others required him to take and pay for stock in the undertaking, which in many instances, involved a liability and a risk he was not in a position to assume, considering his limited means. He has to be regarded as one of the workers, practically without capital, and yet, as a party most desirable to interest directly in the prosperity of the undertaking. How then can his case be reasonably met?

Profit sharing by employees implies that there are profits to share, and that, as these rise and fall or disappear altogether, the return to the employees from them must vary from year to year, or, possibly, occasionally vanish. This is just where it must always be difficult for employers to carry the workers with them. The latter look forward to a definite return for their services, payable at short intervals, and where these services are the same in different years, the contingencies of the market, or mistakes in management, which may diminish or altogether wipe out profits in any year, do not appeal to the workers as properly affecting their wages, or their other interests in the undertaking. This, then, leads to the question whether their share in the profits could not be made an annual charge against revenue, irrespective of the amount of the profits in each year, the larger profits of a successful year being made to bear any excess required for the workers' share in less successful years. On the other hand, the workers' return from profits should properly be in some way proportioned to the services rendered by them, and, under present conditions and as a general proposition applicable to all workers in the industrial establishment, this can only be done by taking wages for a definite period, suggestively a year, as the criterion. It is not possible to gauge the value of the services of the worker who is here to-day and there to-morrow. Thus, the wages earned by an employee in a given year would furnish the basis on which during the next succeeding year, a definite percentage upon them would be payable to him out of the profits, in addition to his usual wages. Only employees who had been working throughout the whole, or for a fixed portion, of the preceding year would thus participate in this percentage.

A Suggestive Plan of Profit Sharing.

This leads to a suggestive plan that on the salaries and wages earned by the workers during the previous year, a definite dividend of, say, 10 per cent. thereon should be annually given, irrespective of the amount for the year, of the total profits of the firm or corporation, and should be disbursed in quarterly instalments, or, more frequently, if desirable. This fixed annual dividend of 10 per cent. might, however, be increased to whatever rate per cent. above 10 was declared in any year as a dividend to the shareholders or partners in the company on their capital. In the working out, practically, of the suggestion, an employee who had earned, for instance, $1,000 last year, would be entitled this year, in addition to his wages, to $100 in quarterly payments, or, if the shareholders' dividend on their capital in the enterprise was 15 per cent., the employee's addition from the profits would be increased to 15 per cent., or $150. Thus the employee could look forward to this return at the end of each quarter, like the interest on a bond. The prospect of an increase in the rate, if profits were large, would act as a stimulus to him in his work, whilst the taking of the previous year's wages as the basis, would result in steadiness of work during the current year in order to maintain or increase the basis for the next year. The points aimed at are definite sharing of profits on an easily comprehended plan, prospects of an increase whenever the general shareholder receives a higher rate, frequent distribution, steadiness of work, and stimulus in production, whilst there is the important sentimental effect on the employee of personal interest in the enterprise through sharing in its profits.

Suppose You Are Drawing Up Your Will

Then you would weigh carefully the advantages and disadvantages of an Individual Executor compared with a Corporate Executor. The advantages of the Corporate Executor are many. For instance, a Corporation never dies, has ample financial responsibility, and experts to take charge of every phase of the work, conducting the affairs of the estate as a regular business to the heirs, thus being accessible for interviews and reports at all times. A Corporate Executor's charges are no more, and often less, than those of an Individual Executor. Our Booklet, "Making Your Will," mailed on request.

LETTER TO THE EDITOR

FIRE INSURANCE LEGISLATION

Sir,—The public in general have been hearing a lot for some time from various quarters about fire prevention and fire protection, commissions to enquire into the causes, and so forth, but beyond these conferences, held in various parts of the Dominion, we seem to get very little action of a drastic nature to compel the heedless and careless to become natural observers of the law of cause and effect. I am afraid that until our present federal government is empowered to pass a Dominion act for the protection of property we shall struggle along with or behind provincial camouflage.

The province of Saskatchewan is the only one that has come out flatfooted with an act, though the province of Alberta has a facsimile of the same act, but as yet unpublished.

In your publication of the 6th inst. you published an address read before the Dominion fire chiefs at a convention by the superintendent of insurance for the province of Saskatchewan. This was chiefly a recital of the act passed in 1916, most of the sections of which were enlarged and dilated upon by the reader, but if the chiefs had been provided with a copy of the act and followed the reading of same in its various stages, they would have detected a grave omission, viz., Section 17, which forms the whole crux of the situation and which nullifies the whole act when taken advantage of. For the benefit of those who are less intimate with this act I will quote Section 17, which was avoided at the conference: "Nothing shall render it obligatory for the fire commissioner, his deputy or inspector to perform in cities, towns or villages such of the duties prescribed by or under the authority of this act relating to matters other than the investigation of fires as are provided for by by-laws of the municipality."

Provision for the maintenance of this office, salaries of the employees, and so forth, is made by the next paragraph, Section 18, which was duly read at this conference. It provides that the insurance companies shall pay one-third of 1 per cent. of their income—in excess of all the other taxation with which they are burdened—for the maintenance of an office whose work under Section 17 is not obligatory to do any of the duties prescribed under the act for the prevention of fire other than an investigation of the fires and their origin.

Now, sir, I would like to know of what use is an act which can be twisted and turned at the will and discretion of the government's employees when not only is the strictest economy and conservation of material required, but a very rigid scrutiny imposed and effort made to enforce a law which will provide protection against loss of property, and also assistance to the insurance companies who have to pay for the upkeep of that office?

So far as Section 5 is concerned, it is both laughable and lamentable to find the grave, neglected condition of many of the towns and villages in Saskatchewan, especially the smaller frame towns, where, if there is a local constable appointed by the local council, he is often menaced and hampered in his work of enforcing removal of rubbish piled in close proximity to buildings, and there is no contact with or recognition of the government to adjust this condition, in spite of Section 5, in any shape, manner or form.

If any of the fire chiefs who were at Toronto or the interested public would take the trouble to visit some of these smaller towns they would find what I state to be correct, and would then appreciate the imperative necessity of the federal government doing something Dominion-wide. In confirmation of this the department was advised in April, 1917, of the grave condition of things in the town of Abbey, but nothing was done until a fire followed the next month, attributable to accumulation of rubbish. Fortunately, the fire was seen in its incipiency and checked in time to avoid a general conflagration. Then the merchants got busy and organized a general clean-up.

Possibly, when this present bloodshed ceases and the Dominion government has time to turn its attention to less important matters we shall get legislation of such a drastic nature that the general public will awaken from their lethargy and find themselves face to face with responsibility of personal liability, not only for their own property, but also that of their neighbors, lost by fire through sheer negligence and wanton indifference.

Those of your readers who are subscribers to the National Fire Protection Association, and follow the progress the association is making in the United States through legislative assistance, will have read with interest that some of our go-ahead cousins across the border are putting through measures in some of the States akin to those adopted in European countries, and when we get in line on the same principles, then, and only then, may we hope to see a steady diminution of our fire losses, and the consequent reduction of loss ratio for the Dominion. Very little, if anything, will be gained by attending conferences, providing picture shows illustrating fires, or a sheaf of bill posters, emblazoned in red ink, warning the general public of the danger of fire, for they know that already to their cost, and have had their warnings to no immediate effect or improvement in observance of care.

Even whilst I write, a report is to hand of another big fire at this very town of Abbey, Sask., doubtless caused by the usual indifferent observance of fire preventive measures, and which might be remedied by the Dominion government with officers who are not only experienced and trained as to all kinds of fire hazards, but who would devote their whole time to the suppression of the evil.

H. E. Bligh.

Saskatoon, September 18th, 1918

COMMISSION CLAIM DISMISSED

The claim brought by A. M. Whiteside, barrister, of Vancouver, against the Wallace Shipyards for close on $18,000 commission in arranging a loan with the Spencer Trask Company, of New York, of $500,000 to finance certain Norwegian shipbuilding contracts was dismissed on the 10th inst. by Mr. Justice Clements. His lordship held that the plaintiff, under the original agreement, was entitled to $10 a day from August 20th to February 6th, a sum of $1,710, and his travelling and living expenses during that time, and orders a reference to the registrar to determine the amount of these and whether the defendant is entitled to any credits.

VICTORIA ASSESSMENT REVISION

The commission appointed following the passage of the city of Victoria Relief Act at the last session of the British Columbia legislature, and which is composed of Messrs. Arthur Coles, chairman; Arthur Wolfenden and A. M. Bannerman, completed its work on the assessment roll on September 6th.

The task of reducing the city's assessments from $48,000,000 to a little more than $45,000,000 was a particularly difficult one, but the commission did not lose a day in getting the work completed. While actual revision of the assessment roll was finally wound up on the 6th, the commission was not in a position to make its report to the city council for some days. Several appeals had to be considered and consultations held with the Local Improvement Commission. The Assessment Commission has completed its work well ahead of schedule, yet it has made a searching examination of assessments throughout the city. Twenty thousand separate pieces of property have been subjected to revision by the commission.

Two new steam engines have arrived in Prince Edward Island for use upon the Prince Edward Island Railway.

The representatives of all the labor and Socialist organizations of the allied countries have been requested to meet in London in a conference called by Samuel Gompers, president of the American Federation of Labor, to discuss the views of the Federation on the war and to ascertain the measure of their agreement with the British labor memorandum on war aims.

Tremendous enthusiasm marked the inauguration of the opening of Australia's seventh war loan campaign. After a naval and military procession, accompanied by three tanks and an aeroplane overhead dropping leaflets, acting Premier Watt sold the Lord Mayor of Melbourne the first bond. The tanks toured the populated areas, and the acting Premier was kept busy selling bonds from the top of one. The whole of Australia has been divided into areas and a quota allotted each area. When the quota is reached an honor flag will be raised. It is expected that forty million sterling will be raised easily within a month.

TO ADMINISTER ALL TAXES FAIRLY

Dominion Tax Commissioner Addresses Convention of Chartered Accountants

In addressing the convention of the Dominion Association of Chartered Accountants in Montreal on September 20th, upon the Business Profits War Tax Act and the Income Tax Act, Mr. R. W. Breadner, Dominion Commissioner of Taxes, bore testimony to the goodwill evinced by the taxpayer, which he said his department had always made a great effort to gain. Owing to the patriotic spirit of the taxpayer the department had not yet been called upon to appoint a board of referees. Another pleasing aspect of the Business Profits War Tax Act was that it had yielded far more than had been anticipated and that the cost of collection had been much less than was expected.

"In the first year of the act," said Mr. Breadner, "business in Canada was at a low ebb, and it was not considered that profits would be large. When the bill was introduced into parliament in February, 1916, the best estimate made at that date as to the revenue which would be produced would be 25 or 30 million dollars. In the accounting period of 1915 the amount collected was $12,508,549, and in the second year it was $21,271,083. Total collections to date were $43,330,494. The estimated amount still to be collected for the accounting periods of 1915 and 1916 was $2,500,000, and for the accounting period 1917, $18,000,000, while the entire total for the whole period would be $63,830,494. The cost of collection for the first year was $58,174, or 46½ cents per $100 collected, and for the second year $80,634, or a fraction less than 38 cents per $100 collected." Mr. Breadner further explained that as the act was a temporary one, the policy had been adopted of having a small permanent organization which would give uniformity of administration. The maximum staff employed throughout the Dominion during any one month in the collection of the tax (Business War Profits) was 40, half of whom were stenographers and typists. The department expected that the tax payable during the three years the act was originally intended to cover would be collected before the close of the fiscal year.

Scope of Business Tax Act.

In reply to questions concerning the working and interpretation of the act, Mr. Breadner gave the following, among several rulings:—

The act applies to each and every accounting period ended since December 31, 1914, irrespective of the date the accounting period commenced.

The act applies to all businesses, including subsidiary companies, foreign companies, shipping goods into Canada on consignment and the value thereof at any time during the accounting period amounts to the capital set forth will be considered as coming within the provisions of the act.

A company incorporated in Canada whose business and assets are carried on and situate entirely outside of Canada is not subject to the provisions of the act.

Depreciation or appreciation of securities as determined by quotations on the Stock Exchange cannot be taken in consideration when determining profits for the purpose of the act. The same principle applies to land, and so-called profits or losses on land or securities cannot be considered until the investments have been sold.

Tax paid under this act can be considered as an expense incurred during the accounting period following that which was taxable.

Loss incurred in one period cannot be placed against the profits of succeeding period.

Corporation life insurance cannot be considered as an expense. The amount realized from corporation life insurance is not classed as a profit.

Profits made during an accounting period cannot, for the purpose of that period, be classed as capital.

Insurance taken as a sinking fund for payment of a mortgage is not considered as an expense.

Certain firms had claimed that contributions to patriotic and war purposes should be considered as tax, but this could not be allowed.

With regard to "good-will," where a trade or business has been converted into a company, and shares in the company were wholly or mainly held by the person who was owner of the business, no value should be attached to those shares so far as they are represented by "good-will," unless special circumstances warrant consideration. Patent and secret processes shall be deemed to be material assets.

Mr. Breadner also devoted some time to the Income Tax Act, which, in his opinion, would become a permanent measure. He was of opinion that the revenue to be derived therefrom would not reach the amount that some of the newspapers estimated. He emphasized the fact that farmers would be taxed, and said that hundreds of assessments had been made against them.

LARGE PART OF UNITED STATES LOAN TO BRITAIN SPENT IN CANADA

About $400,000,000 of the funds loaned to Great Britain were spent in Canada for wheat and munitions during the year ended last June 30th, and have contributed materially to improving the exchange situation, which was so adverse to Canadian business interests. This became known in Washington recently in connection with the treasury reports that exports from the United States to Canada in the year were $778,000,000 and imports from Canada $434,000,000, leaving about $350,000,000 balance against Canada, in addition to interest and maturities on Canadian obligations in the United States.

This balance was more than offset, however, by the use of British credits, officials explained. In addition, a two-year loan of $65,000,000 was arranged privately in New York by Canada within the year under approval of the United States government. The war and navy departments have placed large orders in Canada, contracts now outstanding being reported at about $125,000,000.

EXPANSION OF CANADA'S PULP AND PAPER INDUSTRY

The pulp and paper industry has expanded very rapidly in Canada during the past ten years, and it appears that Canada is destined to become perhaps the leading country in the world in the manufacture of pulp and paper products from wood. This is largely because of the extensive natural resources of waterpowers and suitable tree species. It is important to point out the opportunities and responsibilities for Canadian engineers in this technical industry. The consumption of paper increases so rapidly from year to year in the more highly developed countries that there is no indication of slackening development, at least for some years to come. Canada now has a total of about ninety mills, many of which are large and of modern design. The export figures for the calendar year 1916 show that pulpwood, wood pulp and paper have increased to nearly half of the total export value (approximately $100,000,000) of all forest products with the exception of the small proportion of specially manufactured articles.

The softwoods are the most important species for papermaking, spruce and balsam fir accounting for the bulk of the woods used, with hemlock, jack pine, tamarack and other conifers coming into more extensive use. Poplar and basswood, representing "soft hardwoods," are valuable for making soda pulp, and a variety of hardwoods, such as birch and maple, are used in smaller quantity. In 1915, the total reported pulpwood consumption amounted to 1,405,836 cords, with an average value of $6.71 per cord. In addition, Canada exported 949,714 cords of pulpwood, which quantity has remained fairly constant for several years, while the consumption of pulpwood in Canada has rapidly increased.

The Brazilian government has cancelled the licenses of German insurance companies.

Revised figures of rate advances granted traction lines throughout the United States and Canada up to September 15th, compiled by the American Electric Railway Association, show that twenty-four cities have given the local street railways higher rates since July 1st, 1918. The figures do not include interurban lines. According to this authority, 246 increases had been granted up to July 1st, and, with the additions since that time, the total number of cities now paying higher rates for street railway service is 270.

CAUSES OF EMBEZZLING

According to an analysis made by the National Surety Company, New York, more than one-half of the 316 embezzlements made good by the company last year were committed by collectors. Although most of the defalcations were caused by either speculation or dissipation, small salaries are given as the causes in several unusually pathetic cases. A 20-year-old girl cashier supported her mother and younger brother and sisters on $6 a week salary until her mother became ill. The girl then embezzled $192 in small amounts to pay household expenses and doctors' bills. In another case it was found that a clerk had embezzled $700 to send two of his motherless children to private schools and to buy medical appliances for a crippled third.

The surety company says that shortsightedness of taxpayers in electing irresponsible persons to public office or in underpaying officials who fill important positions also caused serious embezzlements. A $600-a-year town treasurer lost $50,000 of taxpayers' money in nine years trying to make a private knitting factory succeed. A $200-a-year Connecticut tax collector misappropriated $13,000 of public funds. An Oregon woman, elected honorary district school clerk, lent all the school funds to personal friends. When the county auditor appeared she absconded, leaving her four children for the defrauded taxpayers to support.

* * *

Loans authorized in Saskatchewan under the Soldiers Settlement Act total $250,220 to date, according to figures issued from the provincial office at Regina on September 17th. Up to the present time 280 applications have been dealt with, 182 loans have been issued, 98 have been refused, and 26 are now pending. Loans authorized to date average approximately $1,400.

MUNICIPAL BOND MARKET

The Monetary Times Weekly Register of Municipal Activities and Financing

Truro, N.S.—At a meeting of the town council on September 13th, the town clerk was instructed to advertise for tenders for bonds amounting to $35,000, for the electric light and power plant.

Grimsby, Ont.—The tax rate for the year has been struck at 33 mills, or 17 mills higher than last year. The present rate still leaves some $20,000 unprovided for, which will probably be raised by the issue of debentures.

County of Wentworth, Ont.—The debenture debt of the county is now approximately $300,000. Placing it at this figure Councillor C. E. Dickson stated that Dundas share for principal and interest would be only $600.

Windsor, Ont.—A by-law providing for the issue of $77,000 of ten-year debentures at 6 per cent. to cover certain municipal liabilities was passed by the council at a recent meeting. The money will be used in meeting debenture debts and moneys owing on the county buildings settlement for 1917, repairs to the civic incinerator and expense entailed in the work on the London Street bridge.

Ottawa, Ont.—The city council of Ottawa has passed by-laws authorizing the expenditure on capital account of $140,000 for high school and $14,000 for public school purposes, and of $5,000 for the Navy League of Canada. The latter two items will be financed as sinking fund investments. Bonds for the $140,000 issue will be placed on the market after the Victory Loan campaign is closed.

Chatham, Ont.—The city council will be asked by the public utilities commission to authorize the issue of debentures to the value of $45,000, to cover the additional expenditures which have been made necessary by the rapid growth of the local hydro system. There were strong indications shown that there will be a heavy demand for hydro power in the future. The previous issue of $45,000 debentures was based on an estimate of 1,000 horse-power and 1,500 customers.

Montreal, Que.—A poll was held in the town of Montreal South on September 16th and 17th on the question of raising an additional $50,000 to complete the water and drainage works undertaken by the town. Construction on the water and drainage works was begun under authority of a by-law passed in 1916 authorizing the construction at a cost estimated at $180,000. Owing to the financial situation at that time, however, only $162,000 could be raised, and it is estimated that it will require at least the additional $50,000 now asked to complete the works.

Portage la Prairie, Man.—The tax rate for the coming year will be 35 mills. This rate was struck by the city council at its regular meeting and is an increase of 5 mills over the rate last year. On the farm land within the corporation the rate was fixed at 20 mills, while formerly it was 16½ and the business tax remains as formerly, 12½ per cent. of rental basis. A resolution was also passed asking the union of Manitoba municipalities to urge upon the government the necessity of inaugurating a hydro-electric scheme at the earliest possible moment in view of the increased cost of coal and freight rates.

British Columbia.—The following certificates have been issued by the municipal department of the province of British Columbia: New Westminster, by-law No. 327—Repayment of treasury certificates, $500,000, 5-years, interest 6 per cent., payable half-yearly and debentures thereunder. Richmond by-law No. 226—Dyking, $6,000, 36-years, interest 5 per cent., payable half yearly. Richmond, by-law No. 227—Dyking, $4,000, 36-years, interest 5 per cent., payable half-yearly. North Vancouver District—Waterworks, $40,000, 20-years, interest 5 per cent., payable half yearly, and debentures thereunder. Delta—Pump by law, $12,500, one and two years, interest 6½ per cent., payable half yearly, and debentures thereunder.

Moose Jaw, Sask.—A by law to raise the sum of $10,000 by debentures for the purpose of defraying a portion of the cost of construction of the Children's Aid Building, was proposed by the council. The debentures shall be repayable in 30 consecutive annual instalments of $805.86, and for the purpose of raising such sum a sufficient special rate on all the rateable property of the city shall be levied. Also a by-law to raise the sum of $110,000 for the purpose of laying a cast-iron water pipe from Snowdy Springs Water Supply Works to the city steel water supply pipe from its Caron waterworks, and for the construction of filters and other necessary works connected with such extension of the water supply system was proposed. The debentures shall be repayable in 30 consecutive annual instalments of $8,864.46, and for the purpose of raising such sum a sufficient special rate on all the rateable property in the city shall be levied.

HUDSON BAY RAILWAY WORK TO STOP

It was officially stated at the Department of Railways on September 17th that, owing to the impossibility of securing steel rails, further construction work on the Hudson Bay Railway will be practically discontinued for the season. An arrangement has been made whereby the Canadian Northern Railway will provide a service from The Pas to Mile 189, the section of the road which has been provided with a limited contractors' service. It is pointed out that in view of the fact that terminal facilities have not yet been provided at Port Nelson there is no particular object to be served in laying the rails through to the Bay this season, even if they were available.

MODIFICATION OF NEW HOUSE REVENUE BILL REQUESTED

Modification of some provisions of the new House Revenue Bill so as to meet the peculiar responsibilities of life insurance companies was requested by General Counsel Job E. Hedges, of the Association of Life Insurance Presidents, at the hearing before the Senate Finance Committee at Washington on Friday, September 13th. Besides making an oral statement to the committee, Mr. Hedges filed a brief in which he emphasized the willingness of the companies to do their share towards the financial support of the federal government. At the same time he urged the need for clearing up certain inequalities affecting the interests of policyholders generally.

Mr. Hedges' brief referred to the need for a change in the application of the normal income tax differential to the net income of life insurance companies. He stated that this differential, which reduces the tax from 18 to 12 per cent. on that part of the net income of corporations generally which is distributed, puts a premium on making such distribution. He declared that it is against public policy to practically compel this distribution by insurance companies, and urged that the bill be amended so as to permit the companies to invest their net income in new Liberty Loans without being penalized by the higher rate of 18 per cent.

Mr. Hedges also requested amendments to that section of the bill taxing the proceeds of life insurance policies under the estate tax. He urged the advisability from the point of view of sound public policy of exempting sufficient life insurance, made payable to the estate, to cover the estate or inheritance taxes imposed by the federal government and the states. With respect to the proposed new tax on the proceeds of life insurance policies taken out by the insured, payable to specified beneficiaries, he asked that the $40,000 exemption of insurance be changed so as to make the amount of premiums the basis of the exemption.

Mr. H. J. Birkett, well known in bond circles in Toronto and Western Canada, has opened offices at 502 Canadian Pacific Railway Building, Toronto, under the firm name of H. J. Birkett and Company, to deal in Canadian government and municipal bonds.

While tax collections in Vancouver, B.C., for August show a material improvement over those for the corresponding period for previous years, Ald. Kirk is dissatisfied with the showing for the year as a whole, arrears having come in so poorly that he is convinced a tax sale will be necessary.

It was announced at Montreal recently that the administrative commission had under consideration the partial electrification of the city pumping plant. It was said that after the cost of making the change had been provided for, the annual saving, if one-half the pumping were done by electricity, would amount to $40,000 a year.

WAYS AND MEANS OF FIRE PREVENTION

An Address Before the Ontario Fire Prevention Convention, August 30th, 1918

BY GEORGE F. LEWIS,

Deputy Fire Marshal of Ontario.

We have been called together by the premier of Ontario, Sir William Hearst, for the purpose of trying to solve the problem of what is best to be done to prevent the reckless and impoverishing fire waste that confronts the people of the province. The solution appears to be found in three words, education, carefulness, cleanliness; and the means of attainment is by action, co-operation and legislation.

"Fire-Prevention" is a big subject, with many sub-divisions, and I can only touch on it in the limited time at my disposal. If we formulate a plan and determine to educate the people on fire-prevention lines, preaching the doctrine of carefulness and cleanliness, and unite in co-operative action, backed by wise, constructive legislation, we can confidently hope for success; for the defeat of the entrenched fire demon whose fangs are getting deeper and deeper into the vitals of the nation, destroying its substance through the gradual sapping of its resources—the life-blood of the country. There are great possibilities in co-operation. Drops of water are valuable only when they combine. Alone they dry up and vanish. As Kipling has well said:—

"It ain't the guns nor armament,
  nor funds that can pay,
But the close co-operation that
  makes them win the day,—
It ain't the individual, nor the
  army as a whole,
But the everlastin' teamwork
  of every bloomin' soul."

We must be inspired with those feelings of co-operation if we are going to win; and surely we have a splendid exemplification of unselfish and public-spirited co-operation in the men and women who are here to-day representing the many diversified interests of the province. With such public interest awakened we must and shall attain significant results. Taught by experience and the serious lessons of life, as a progressive people, let us strive to better our conditions.

Vast strides are being made in the preservation and improvement of the health of the nation by educating the children in hygiene, and let us hope that results of equal importance to the wealth and prosperity of the nation may be obtained by educating the children in fire-prevention methods. The child will absorb the teaching more readily than the adult and will often unconsciously teach the parent. We had hoped to distribute to those present copies of a one-hundred-page booklet entitled "Safeguarding the Home Against Fire," prepared for the United States Bureau of Education by the National Board of Fire Underwriters as a fire prevention manual for the school children of America, with a foreword by the Commission of Education. The books were shipped ten days ago from New York, but, unfortunately, they are still in transit. This goes to show the importance attached to the subject of fire-prevention by the paedologists in the United States. President Wilson, as a leader of thought, has expressed himself in a forceful manner: "Preventable fire is more than a private misfortune. It is a public dereliction. At a time like this, of emergency and of manifest necessity for the conservation of national resources, it is more than ever a matter of deep and pressing consequence that every means should be taken to prevent this evil."

The Hon Dr Cody, minister of education, is very much interested in the fire prevention movement, and greatly regretted his inability to attend this meeting. I am sure that the movement will receive great support and be given a mighty impetus through the department of education in this province. The National Fire Prevention Association has issued many publications of an educational character, including a "Syllabus for Public Instruction in Fire-Prevention." Fire prevention school readers have been circulated by different states of the Union, and the British Prevention Committee has published a number of pamphlets including "Fables for Children in Respect of the Danger of Playing with Fire." Of the 5,396 fires during the first six months of 1918, no less than 537 were caused by the careless use of matches. Many lives have been sacrificed by children playing with matches and much valuable property is thus wantonly destroyed.

Bills have been introduced in many state legislatures to fix personal liability for fires due to carelessness or neglect. This action is advocated on account of the impoverishment of the nation by the reckless and increasing fire waste, and the failure of other efforts to interest the public in measures for its own economic salvation. Such laws and ordinances have been operative in European countries for a hundred years. It is in the United States and Canada only that careless individuals meet no restraint in their reckless destruction of the nation's assets and resources. The general principle of the law is entirely simple. It says in effect that "John Doe" has no right to maintain conditions in his building that may lead to its destruction by fire; and that if "John Doe" does maintain such conditions, and a fire breaks out which damages the building of his neighbor "Bill Roe," then "Bill Roe" shall have the right to collect damages from "John Roe."

It is but an elementary principle of justice that an individual should be responsible to others for his acts when those acts result in injury to his neighbor. The application of this principle to fires caused by negligence or design occurring on this continent seems to have been ignored up to the present. In other countries, like France, for example, it has long been applied with excellent results; where an investigation is made into every fire that occurs. The responsibility of a man for fire damage to his neighbor does not lie in any special enactment, but in the interpretation of two short sections of the Code Napoleon.

Article number 1382 says: "Every person is responsible and liable for any acts of his by which any other person has or may have sustained any loss, damage or injury."

Article number 1382 says: "Every person is responsible for any loss, damage or injury caused by his own act, carelessness or negligence."

This responsibility, as it relates to fires, is called in France "The Neighbor's Risk." It is universal and applies to landlord and tenant alike. The burden of proof lies with the neighbor making the claim. He must be able to prove, before he can recover damages, that the fire was directly due to gross carelessness, culpable neglect, or mischievous intent. In some other European countries there are rigid inquiries held into the cause of fires, and a penalty imposed on those who violate the laws for safeguarding against fires.

Losses and Their Causes.

In Europe the average fire waste is 33 per cent. per capita. In Ontario the fire waste for 1916 was approximately $6 per capita, and in 1917 $4 per capita. From these facts and figures you can draw your own conclusions; 5,396 fires burnt up more than seven million dollars' worth of property during the first six months of this year in this province. Nearly all of these fires were due to carelessness; 3,456 of them occurred in the homes of the people, causing a loss of $1,065,598. Each of these fires was a potential conflagration. There were 330 farm barns destroyed, entailing a loss of $369,328, and there were 601 mercantile stores burnt with a loss amounting to $1,754,374. Under these three headings alone we have 4,387 fires during the six months, with a loss amounting to $3,187,300. If we add to these figures the 261 fires classified as manufacturing and special hazards, with a loss amounting to $2,487,513, we get a total from these four classifications of 4,648 fires and a loss amounting to $5,674,813. We have, therefore, over 86 per cent. of our fires in this province occurring among four classes of risks and over 82 per cent. of the total losses are from the same four sources. This simplifies the situation somewhat. If we can minimize the fires in these four classes of risks we will be striking at the fountain head of the fire waste of this province. Take first of all the barn fires. With care, cleanliness and properly installed lightning rods, these fires can be reduced to a minimum. Statistics show, both in the United States and Ontario, that lightning rods are more than 99 per cent. efficient. During the first six months of 1918 there were 444 lightning fires, causing a loss of $220,878, and of this total 442 fires occurred in buildings not rodded. The two fires that occurred in the rodded buildings caused damage to the extent of only $28.

The government is doing all in its power to conserve our foodstuffs so as to feed our soldiers at the front and keep ourselves and our allies from starvation, yet with a comparatively small outlay on the part of the owners of these buildings, for the installation of lightning rods, approximately a quarter of a million dollars would have been saved: two-thirds of which may be estimated as farm produce. Mr. J.

703 ROGERS BLDG.,
VANCOUVER, B.C.

E. B. McDERMID,
Managing Director

B. Laidlaw will speak to you regarding the fires in dwellings. The prevention of fires in mercantile stores and industrial plants is a subject of great magnitude and importance. Considering the matter, however, in a broad way, I can say positively, that the fire waste in such plants can be very materially reduced by simple precautionary measures. Carelessness and the accumulation of rubbish, lumber, boxes, paper, etc., are the principal causes of these fires. With a proper exercise of care and keeping the premises clean, much can be accomplished. The installation of automatic sprinkler systems, emergency fire fighting apparatus, regular inspection, efficient watchmen service and fire drills are necessary for the life and protection of property. All fires are small when they start and if detected at once may be quenched with buckets of water or chemical extinguishers, which should always be unobstructed and convenient for quick action.

Fire Waste is Excessive.

Statistics show that fires occur in Canada in the ratio of one to every 600 people, and in Europe in the ratio of one to every 3,000 people. That is, Canada stands with the inherent capacity for conflagration five times greater than Europe. The progress and prosperity of the nation is based on science, invention and the industrial arts. The backbone of the agrarian districts is the fruits of the soil; the backbone of the city is its manufacturing industries; destroy these fundamentals and you destroy your country. Can you realize that we are destroying these things for the creation of which we strive so hard; we have been burning them up at the rate of $27 a minute, every minute of the day and night for the last six months?

In the United States the fire waste amounts to $500,000 a minute, and comparing these figures on a per capita basis with Ontario, we are more than twice as wasteful individually as our extravagant cousins across the border.

The fire waste touches the pocket of every man, woman and child in the province. It is an indirect tax. It is paid in the cost of everything we eat, drink and wear. It is only through educational channels that we can make the people realize it. Many have the false idea that it is the insurance companies who pay this colossal tax. The insurance companies collect the premiums and distribute them as fire losses. The greater the fire loss the more they must collect. If they collected less than they have to pay out they would soon be bankrupt—capital invested in fire insurance companies would be wiped out. The greater the fire loss the more the people are assessed to pay for it, and the less they have to spend for other things. Whatever is wasted in the home makes the struggle of the family harder. Whatever is wasted in the province makes it harder for its people to live.

Fire Prevention Day.

October 9, 1871, was the day Mrs. O'Leary's cow kicked over the lamp and started Chicago's great conflagration which consumed 18,000 houses extending over an area of more than 2,000 acres. Two hundred persons perished and nearly 100,000 were rendered homeless. The fire was small, like all other fires, when it started and, like the majority of fires, was the result of carelessness. The anniversary of this terrible holocaust has been adopted by common consent throughout North America as "Fire Prevention Day." The celebration of October 9th as "Fire Prevention Day" is a "means to an end." It is a special opportunity offered every person to talk fire prevention and "clean-up." A clean city or town has few fires. It is best, however, to concentrate on some special piece of fire prevention work.

The precise nature of the task to be undertaken will vary with the locality and no attempt will be made this year in the direction of standardizing this feature. I hope, however, that some time in the future, by co-ordinating the observances, it will be possible to take a well-defined part in some great drive for the general adoption of certain reforms endorsed by the league. This year it is hoped to furnish the committees in charge of local celebrations with all the information and literature they require. The manner of celebrating Fire Prevention Day is as broad as human ingenuity can devise. A draft programme will be issued suggesting "What to do and how to do it," school exercises, brief talks, fire drills and special attractions or "stunts," that may be used for the purpose of publicity. So statistics regarding Ontario fires are published monthly in the "Public Service Bulletin," which is free for the asking. A great deal of valuable information regarding the cause of fires and circumstances surrounding them is also to be found in connection with the monthly reports of the fire marshal published in the "Bulletin."

NEW RATES FOR LONG DISTANCE TELEPHONING

A new schedule of night rates for long distance telephone service has been filed with the Board of Railway Commissioners by the Bell Telephone Company of Canada, to become effective October 1st next.

Between the hours of 6 a.m. and 8.30 p.m. the present day rates will apply. From 8.30 to 11.30 the rate will be 60 per cent. of the day rate, and from 11.30 to 6 a.m. 40 per cent. of the day rate.

It is anticipated that this readjustment of rates, which involves both an increase and a decrease in present charges, will effect such a redistribution in the load of long distance telephone traffic as to relieve the congestion now existing on the lines.

INSURANCE FIRMS HAVE DONE THEIR PART

An address by Mr. G. D. F. Finlayson, of Ottawa, superintendent of insurance for the Dominion, was given in Regina on September 10th at a meeting of the local insurance men.

Mr. Finlayson congratulated the insurance men upon the big increase in business despite war conditions, and, dealing with the question of investment, stated that, on account of the splendid voluntary support given by the insurance companies when the last Victory Loan was floated, the government had found it unnecessary to renew the legislation requiring them to invest 50 per cent. of their ledger assets in government securities. Last year, he said, the companies invested far more than the required 50 per cent. in the Victory Loan.

A. E. Fisher, superintendent of insurance for Saskatchewan, was present and briefly addressed the gathering. A vote of thanks to Mr. Finlayson was moved by T. F. Conrad, of the Saskatchewan Life, seconded by H. M. Arnaud, of the Travellers' Life, and enthusiastically carried. The meeting was presided over by president J. H. Wright, of the Great-West Life.

PALATINE INSURANCE COMPANY, LIMITED

For the year ended December 31st, 1917, the premium income of the Palatine Insurance Company, after the deduction of reinsurance, was £579,279. The amount of the funds at the beginning of the year was £534,174, making a total of £1,113,453. The claims amounted to £306,228. The total reserves at the end of the year were £593,810, an increase of approximately £60,000; £11,000 was transferred to the profit and loss account. There was a balance in this account from last year of £28,818, and approximately the same amount was received from interest and dividends. After paying dividends on the stock and transferring a considerable sum to the investment reserve and contingency fund there was a balance to be carried forward of £28,726, or approximately the same as at the end of 1916.

The company's assets are well distributed, about one-quarter of them being invested in British, colonial and foreign government and municipal securities; £325,020 are invested in railway and other debentures and debenture stocks. The total assets are £1,005,397, the balance being made up of £248,527 cash and other items. The company is capitalized at £200,000, of which all but £1,000 are ordinary shares. The principal liability is, of course, the fire insurance fund, in addition to which there is the investment reserve and contingency fund, the reinsurance and the profit and loss account.

The company entered the Canadian field several years ago, and its head office here in Montreal is under the management of Mr. J. McGregor.

The Winnipeg board of trade adopted on September 18th a motion sponsored by J. H. Ashdown to get behind a movement to secure the restoration to Winnipeg of the head offices of the Canadian Northern Railway, which now are in Toronto. It is expected that the entire membership of the board of trade, 2,070 business men, will co-operate. There is also a possibility that the city council will throw in its weight with the board.

FOREIGN EXCHANGE IN 1918

Fluctuations During Year Ended 1st July — Wonderful Way in which Sterling Quotations in New York have been Maintained—Exchange Reflects State of Trade and also Political Outlook

BY E. M. DAWSON,
Manager, Foreign Exchange Department, Union Bank of Canada, Montreal

ON the accompanying chart, prepared by the Union Bank of Canada, Foreign Exchange Department, Montreal and Toronto, will be found the fluctuations of Sterling Cable Transfer in New York, Sterling Cable in Canada and New York Exchange in Canada, for the fourth year of the war, ending June 30th, 1918. The charts have been compiled from the 1st of July to the 30th of June in each following year, as it was in July, 1914, that foreign exchanges first began to show the effects of the anticipated war.

The dotted line shows the course of Sterling Cable in New York, the heavy unbroken line the course of New York Exchange in Canada, and the lighter unbroken line the course of Sterling Cable in Canada, which moves concurrently with the rates of the former two.

Sterling in New York and Canada.

Mention was made in the explanatory article accompanying our 1917 chart of the wonderful achievement of Great Britain in holding Sterling Cable "pegged" at 476 7/16 in New York, and the expectation, since happily realized, of how the advent of the United States to the war would ease her burden. Again the absolute uniformity of the dotted line shows how well the task has been accomplished; as for the past year, in fact since January, 1916, Sterling Cable has not fallen below 476 7/16 in New York.

The stability and world-wide market for the pound sterling have always been synonymous with the financial supremacy of London, so that in this connection it may be of interest to note how the "pegging" of sterling has contributed to the above situation, and the prospects for its retention, in view of the premier creditor position the United States now occupies towards the rest of the world.

At the hearings before the Senate Committee on Banking and Currency in June last, at Washington, it was the practically unanimous opinion of the leading foreign exchange experts, bankers, and importers of the United States, that Great Britain by her action in stabilizing sterling in New York had retained her financial supremacy for any, or all of the following reasons:—

First.—In 1816, by her action in being the first country to place her currency upon a gold basis, Great Britain made the pound sterling the most stable currency in the world, so that her merchants, and the merchants of any other country could make a contract in sterling, without the risk of violent fluctuations; London, therefore, became the clearing house for the world. By restoring the stability of sterling in New York, in 1915, Great Britain retained this enviable position.

Second.—The United States, prior to the "pegging" of sterling in New York was, by reason of her vast exports, practically in control of the world's exchanges, more so as at that time she had not become a belligerent.

It needed only familiarity to place the dollar credit on a desirable, or even more desirable basis than the sterling credit, but Great Britain by stabilizing the market placed, as regards stability, the pound sterling on an equal basis to the dollar. Consequently, being in possession of the leadership, London was able to retain it.

Third.—Great Britain has always developed the most able international bankers in the world; she, being in possession of them will, together with her natural advantages, retain her financial supremacy until some other country in possession of equal if not greater natural advantages, develops as able, or more able international bankers.

Fourth.—By means of stabilizing sterling in New York, Great Britain has been able, indirectly, to finance large obligations due to the neutrals; the neutral creditor being able to sell his sterling in New York, and with it purchase his own currency. Due to this cause arises the anomalous situation of the neutral exchanges being at heavy premiums in New York, in spite of their unfavorable trade balance with the United States.

Since sterling exchange in Canada follows the course of sterling in New York, and New York funds, a glance at the chart will show its fluctuations, following exactly the trend of New York funds, owing to the "pegging" of sterling in New York.

New York Funds in Canada.

The period shortly prior to, and following the outbreak of war, has witnessed more violent, but not wider fluctuations than have occurred during the year shown on the chart. To account for this it is necessary to revert to the situation of last year. Canada on foreign trade showed a large favorable trade balance, composed chiefly of exports to Great Britain, for which she had furnished credit. Offsetting this, however, was a lesser heavy unfavorable trade balance with the United States, to be settled for on a cash, or short-term credit basis.

In view of the above situation, which this year has become aggravated, the break in New York funds to 15/16 discount on October 23rd last, may appear unwarranted. A review of the trend of the market will show the reasons.

Commencing in July, 1917, the chart shows fluctuations of from ¼ to 9/16 premium, and reactions to 3/16 premium, due chiefly to the grain carried over from the preceding year having been all exported.

From August 1st the chart shows a fairly regular line around 3/16 premium, with a descending tendency, until on September 23rd, par is reached.

From this date until October 23rd, on which date 15/16 discount is registered, a heavy declining trend will be observed, due to loans in the United States for account Great Britain, for the purchase of the Canadian wheat crop.

It is interesting at this date to recall the urgent appeals to the United States to permit the export of gold to Canada, and the final arrangements whereby shipments were to be allowed on condition of being "earmarked" and returned, when needed.

Many comments were made at the time as to the necessity for this arrangement and the so-called "sentimental" response of the market to its announcement. The facts, however, were, that before the arrangement was made the heaviest selling pressure was over and the final proof that sentiment played no part in the subsequent rise, was the fact it was unnecessary to import gold from United States while New York funds were at a discount.

From November 8th, the date the market again touched par, the chart shows a succession of steady rises, varied by occasional reactions, until April 8th, on which date a new high of 2 per cent. is reached.

Technical and sentimental reasons, due to the efforts of the Canadian government to float loans in the United States, caused between May 1st, and May 8th, a sharp break from 1¾ to ¾ premium. Sentiment, however, is again short lived, as inside of another week the rate was 1⅝ premium.

After sustaining a further reaction to 1 per cent., the rate steadily climbs, with small reactions, to its new high record of 2 15/32 premium on the 27th June, from which date it has reacted to, and hovered around 1⅞ to 2 per cent. premium.

Temporary relief may be obtained this fall by grain shipments, provided they are financed by British or American

credits, but permanent rectification of the present undesirable conditions can be had from either, or all of the following:—

1st.—Liquidation of Canada's unfavorable United States trade balance, through the placing of American war orders, and curtailment of unnecessary imports.

2nd.—Securing by Canada of American loans, which at present appears improbable, in view of the present financial burdens of the United States, whose own exchanges with the neutrals needs stabilizing. Our currency is even yet at a lesser discount than Great Britain's in the United States.

3rd.—The liquidation, or discounting in the United States of British treasury bills at present held by us in payment of our exports.

4th.—Export of gold which at present is undesirable.

Effect of Allied Victories.

It is evident that the foreign exchanges have now commenced to show the effect of the allied successes. Heretofore, except for a weakening of the Central Powers exchanges on the neutrals, no great response to allied successes can be observed, but on August 10th, Sterling Cable touched 477⅜ in New York, and the neutral exchanges in New York have all shown heavy depreciation; while the Central Powers exchanges on the neutrals have shown great depreciation, all of which are undoubtedly due to the opinion of expert international bankers that the tide has definitely turned in favor of the Allies.

NEWSPRINT PRICE IS FIXED

Robert A. Pringle, K.C., the paper controller, at the conclusion of the newsprint enquiry on September 25th, set new prices for newsprint paper. The price for all the mills is $69 per ton instead of $57, with the exception of the Fort Frances mill, which was allowed $74 per ton, subject to certain deductions for freight rates and duty on sulphite, which charges may be reduced later on.

The new order of the controller is for 60 days, or to December 1. and is retroactive to July 1. It was not the price the manufacturers felt they were entitled to receive, and George H. Montgomery, K.C., told the paper controller that in all probability the manufacturers would appeal his finding to the paper control tribunal. The new prices, which go immediately into effect, as they are retroactive to July 1, were announced as follows:—

Roll news in car lots, $3.45 per hundred pounds. Roll news in less than car lots, $3.52½ per hundred pounds. Sheet news in car lots, $3.80 per hundred pounds. Sheet news in less than car lots, $3.92½ per hundred pounds. All prices f.o.b.

Efforts are under way to have the duty taken off the sulphite used by the Fort Frances company to secure a lower freight rate for the groundwood it uses. Mr. Pringle said that on these two items the cost might be lowered by some $4 per ton, and if this was done then the Western press would be receiving its paper at the same rate as the Eastern publisher will have to pay.

BANK BRANCHES OPENED AND CLOSED

The following is a list of bank branches opened and closed in August, 1918:—

Branches Opened—One.

Montreal, Que.	Bank of Hamilton.

Branches Closed—Four.

Calder, Sask.	Bank of British North America.

---

*Sub-branches.

The western provinces will harvest between 160,000,000 and 175,000,000 bushels of wheat this fall, besides showing a marked increase in the production of cattle and hogs.

The city of Seattle, Washington, is purchasing the street car line operated by the Seattle Traction, Light and Power Company at a price of $15,000,000. The city will issue 20-year public utility bonds with which to meet the purchase.

RECENT FIRES

The Monetary Times' Weekly Register of Fire Losses and Insurance

Brantford Township, Ont.—September 18—Two barns, drive-shed, season's crop of grain and hay and gasoline engines of J. O'Reilly were destroyed.

Brantford, Ont.—September 23—The Brantford Garage was damaged.

Dover Township, Ont.—September 24—Grain separator of G. Jubenville, on the farm of A. St. Pierre, was destroyed.

London, Ont.—September 24—The cooperage plant of the D. S. Biscuit and Candy Company was damaged.

Mawer, Sask.—September 19—Business section of the town was destroyed. Estimated loss, $95,000.

Montreal, Que.—September 19—Premises of W. H. Dwyer and Company, Limited, hay and grain merchants, 164 B Ottawa Street, were damaged. Estimated loss, $15,000.

September 22—Vacant house at 2 Union Avenue was destroyed. Estimated loss, $2,000.

New Westminster, B.C.—September 18—The McLean-Burr garage and nine autos were destroyed.

St. John, N.B.—September 25—The Dufferin Hotel was destroyed.

Trail, B.C.—September 13—The Dwight and Lloyd roaster building and contents were destroyed. Estimated loss, $40,000. Insurance carried, $20,000.

Victoria Harbor, Ont.—September 10—The business section of the town was damaged. Estimated loss, $60,000.

Walkerville, Ont.—September 16—Garage and barn of W. Simpson, Walker Road, were damaged. Estimated loss, $2,000.

Waterloo, Ont.—September 18—The Mueller's Cooperage was damaged. Estimated loss, $4,000.

Windsor, Ont.—September 24—Home of John Lane was destroyed. Estimated loss, $2,000.

ADDITIONAL INFORMATION CONCERNING FIRES ALREADY REPORTED

Vancouver, B.C.—Fire Chief Carlisle submits the following report for the month of August to *The Monetary Times*:—

The estimated total damage resulting from fire for August was $6,559, of which amount $4,853 was covered by insurance, leaving a property loss above insurance at $1,706. The total value of the property involved by fire was $2,282,035.

The following shows the cause of fires for the month: Backfire 1, carelessness with cigarettes, matches 4, children playing with matches 3, electrical origin 6, flying sparks (chimneys, smokestacks, etc.) 5, friction (belt on electric motor shaft) 1, gasoline stove exploding 1, match near gas leak 1, overheated brake band (auto) 1, paper near gas stove 1, tarpot boiling over on stove 2.

In seeking an investment for surplus funds the prudent as well as the patriotic investor should not overlook Victory Bonds.

SASKATCHEWAN TAX COMMISSION PROPOSED

Representatives of Municipalities Make Suggestions to Provincial Goverament

The appointment of a permanent taxation committee to equalize municipal assessments and taxation throughout the province was the request preferred to the Saskatchewan government recently by a joint committee of the urban and rural municipal association. The government promised to give the matter very serious consideration. Those present representing the government were Premier Martin, the Hon. W. R. Motherwell, the Hon. Geo. Langley, the Hon. Mr. Knowles, and the Hon. Chas. Dunning. Prior to the conference with the government the joint committee met and discussed the problems of taxation arising from the matters set forth in the report of the taxation expert, Prof. Murray Haig.

The Association of Rural Municipalities was represented by Murdo Cameron, M.L.A., of Nutana, and J. J. Lamb, of Ogema; while the Union of Saskatchewan Municipalities was represented by Commissioner Thornton (Regina), Commissioner Yorath (Saskatoon), W. F. Heal (Moose Jaw), C. J. Pilkington (Yorkton), O. J. Godfrey (Indian Head), and G. L. Wheatley (Maple Creek).

Motion Presented.

The following resolution was passed and presented to the government:—

"That this joint committee appointed by the Union of Saskatchewan Municipalities and the Association of Rural Municipalities agrees that: Professor Haig's report on taxation conclusively proves: (a) That under the present system provincial and local taxation is inequitably distributed; (b) that provincial and local expenditures should be more distinctly defined; (c) that the basis of taxation requires to be broadened and consolidated; (d) that a scientific system of taxation for both provincial and local purposes should be adopted. And that, therefore, this committee requests the provincial government to appoint an experienced tax commission as recommended by Professor Haig to compile and direct the administration of a new system of provincial and local taxation which will eliminate the objections to the present system."

Premier Martin when asked for a statement of the government's intentions in regard to the request of the delegation, said that to impose a provincial income tax on top of a Dominion income tax would be a good deal of hardship. The city act provided for the collection of an income tax, although it might not be strictly enforced in some centres.

The position of Saskatchewan cities in collecting arrears of taxes on subdivision property especially was difficult the premier realized, and the cities having taxed real estate for about all it would stand still found need to raise additional revenue. If the burden of taxation was to be shifted there were only two main sources, improvements and incomes, which could furnish much in the way of revenue. The cities had gone ahead rapidly, and with a cessation of real estate operations, unproductive city property was not a good asset from the municipal tax collector's point of view, as was the case a few years ago when the owners paid up their taxes regularly, and were turning over their property.

Request Partly Met.

It was open to question if a change in the taxation system would be beneficial at present. Some of the requests which the municipal delegates had made upon the government were partly met now. The local government board was a case in point as a medium of equalizing assessments where injustices had been done. The wild lands tax commissioner was another provincial government official with wide powers in the way of raising and lowering assessment of land values in the rural municipalities.

Mr. Martin was not prepared to say at present if his government would extend the powers of the provincial officials in connection with assessment values. It was a matter which required consideration, and it had not been studied sufficiently by the government in the interval between the delegation presenting the requests and now to enable him to speak at all decidedly on the subject. At the moment he was not enthusiastic regarding a change in the taxation system.

The work of inspecting the rural municipalities preparatory to the equalization of municipal assessments throughout the province under section 10 of the Wild Lands Tax Act and section 2 8a of the Rural Municipality Act is now under way. Information is being secured by the wild lands inspectors as to the total area of assessable land in each municipality, the total assessment, the average rate of assessment per acre, the maximum rate of assessment per acre and the minimum rate of assessment per acre. An inspection of the land in each municipality is also being made with a view to ascertaining whether the basis of value in the assessment is fair and proper and whether the assessment is equitable as compared with that of the other municipalities in the province. It is hoped to have this work completed within the next two months.

When the required information has been obtained the wild lands tax commissioner will direct the assessor of each municipality to make such changes in the general scale of assessment in his municipality as will bring about a general equalization of rural municipal assessments throughout the province.

Complaints Where Land is Improperly Included.

The wild lands tax roll of each rural municipality is required to be completed before the 1st day of September in each year. Section 17 of the Wild Lands Tax Act requires that a copy of the wild lands tax roll shall be posted in the office of the secretary-treasurer of the municipality, and shall be available for inspection and examination at all reasonable hours not later than the said date. After the roll has been completed the only way in which land improperly included therein can be withdrawn from the roll is through an appeal to the wild lands tax commissioner. Subsection (2), section 8 of the Wild Lands Tax Act states that in case the land of an owner is improperly included in the wild lands tax roll he may at any time on or before the 15th day of November of the year in which the assessment is made forward a complaint by registered mail to the commissioner at Regina, who may reconsider the assessment and correct the roll accordingly. This means that all complaints against the improper inclusion of land in the wild lands tax roll received by the secretary-treasurer of the municipality after the completion of the roll should be referred to the wild lands tax commissioner who will make the necessary inquiries and decide whether or not the assessment of the land under the Wild Lands Tax Act should be cancelled.

COBALT ORE SHIPMENTS

The following is a statement of shipments of ore, in pounds, from Cobalt Station for the week ended September 20th, 1918:—

La Rose, 89,750; McKinley-Darragh, 108,442; Coniagas, 66,465; Kerr Lake, 60,202; Nipissing Mining Company, 87,050; Dominion Reduction, 83,400; Buffalo Mines, 177,885. Total, 673,194.

The total shipments since January 1st now amount to 21,203,553 pounds, or 10,601.7 tons.

VANCOUVER ISLAND SEPARATELY ORGANIZED

Mr. R. F. Taylor, manager of the Colonial Trust Company of Victoria, has been appointed chairman of the Vancouver Island board for the organization of the forthcoming Victory Loan campaign. He was chosen at a meeting of the provincial executive in Vancouver.

Victoria will have a regional office for the whole province, according to announcement made at the executive meeting. Chairman W. H. Malkin reported that this course had been decided upon at a recent conference at Ottawa headquarters. Through the Victoria office, which will be administered by the assistant receiver-general, all bonds will be registered at Victoria instead of being sent to Ottawa, thus obviating some of the delay incident to the campaign of last year.

Mr. Taylor was an active member of the Victoria executive last year, and was the unanimous choice of the provincial board for the head of the local organization. He accepted the post after consulting with his associates in this city and securing their approval.

The whole of Vancouver Island, with such gulf islands as fall naturally in the Vancouver Island zone, will be within the jurisdiction of the Victoria office under the direction of Mr. Taylor.

Deliveries by Ford One-Ton Truck

Ford
ONE-TON TRUCK

PRICE
$750
F. O. B.
FORD, ONT.

THE COMMERCIAL CAR is looked upon today as a necessity by progressive business firms who have hauling and delivering problems to consider.

Wholesale or retail merchants who must deliver quantities of merchandise have found the horse-drawn delivery to be too slow, expensive and entirely inadequate.

The Ford truck, with a single driver, will do more work and cover more ground than two teams and two drivers, for it travels in half the time. This truck will reduce your hauling costs. It eliminates one driver's salary and the care which horses always require. It will make your delivery service more efficient. It will widen your area of distribution. It will be constantly ready for work—day or night. It will show a profit on your investment.

There has been a popular demand for a Ford truck, as is shown by the many uses, for commercial purposes, to which our standard chassis has been put. Now, after most careful designing and exacting tests, we are able to offer the Ford One-Too truck to meet this demand.

The Ford truck is supplied as a chassis only. This permits the purchaser to mount any one of the many body styles specially designed for the Ford truck, and already on the market, and he can select it to meet the individual needs of his business.

See any Ford Dealer in Canada, or write for a catalog

Ford Motor Company of Canada, Limited, Ford, Ontario

MONTREAL BUDGET IN PREPARATION

Increased Expenses Will Likely Result in Substantial Deficit

Montreal's civic budget for 1919-20 is now being prepared by the city commissioners, and it is anticipated that there will be a deficit of about half a million dollars to face and provide for. There are some who hope that the present year will end without any deficit, and point to the reductions that have been made in the outside and inside staffs, and the lack of any big public works. But one in high authority at the city hall has expressed the fear that there would be a deficit of $500,000, which would have to be met by a special tax on real estate of about 10 cents per $100. This would mean a reduction in the real estate tax from $1.35 per $100 to $1.10, as the additional tax of 35 cents was only put on to wipe out the deficit of nearly four million dollars which the new commission had to face when it took office, and which included over $800,000 as the debt of Maisonneuve.

The reasons for the deficit are the general increases in salaries that have been given, and those which will be given before the end of the present fiscal year. It is proposed to give all civic employees a minimum of $3 per day, and the police and firemen, who have now formed themselves into unions, will probably ask for an increase of about $25 per month.

Another reason for the deficit is that the bachelor's tax is not coming up to the expectations of its proposers. They anticipated a revenue of a quarter of a million from this tax alone, but the indications are that not half of that sum will be collected unless some drastic steps are taken.

New appointments by the commissioners on the recommendation of the directors of the different departments will also add to the expenses that have to be met, and which were not provided for in the supplementary budget of this year. There were the two expert advisers, at $7,000 apiece; there is the new purchasing agent at $4,500, who is additional to the former agent, who is still employed, while there is another $4,500 for the assistant director of public works, taking the place of the assistant engineer who is on leave of absence with pay for a time.

Deputy directors and assistants were not provided for in the supplementary budget, as the reserve for salaries and pensions of $18,000 was struck out, so as to reduce the total necessary to be raised.

And finally there is the assessment value of the larger city. Maisonneuve was assessed at $23,000,000 in order to enable its former governors to raise $20,000,000 of loans. Now that Maisonneuve forms part of the city, the assessors of the city will make a new valuation of the property there, and it is anticipated that the assessment will be reduced by about $5,000,000. This will mean a considerable decrease in revenue, because the new assessments will go into effect before the end of November, and although the residents of Maisonneuve have to pay a special tax of 1 per cent., the actual amount the ratepayers there will pay in taxes will be little more than what they paid before, despite the increased tax.

INCREASE IN GOLD PRODUCTION

The remarkable fact that the production of gold during the first half of the current year exceeded that of the first half of 1917 has left a decidedly favorable impression in the north. The half-year output was $4,648,164. This is at the rate of $9,296,328 annually, constituting the highest record in Ontario's history, with the exception of 1916, when $9,397,533 was produced. One fact is made evident, and that is that the Hollinger Consolidated is producing at the rate of more than $6,000,000 annually, thus leaving McIntyre to account for about $1,800,000 and the balance to the smaller producers, the most important of which was the Lake Shore, the others being the Davidson, Patricia, Dome Lake, Tough-Oakes, Teck-Hughes, Crœsus and a small amount from the Newray. Judging by the August record of the Lake Shore, this company may be counted upon for an annual production of somewhere in the neighborhood of $600,000 annually.

PROPRIETORSHIP OF THE WINNIPEG TELEGRAM TO CHANGE

The Winnipeg Telegram announced on September 25th a change in proprietorship. All the former stockholders in the Telegram met in the Telegram office and individually disposed of their holdings, and they will no longer have any connection with the business.

The purchasers are Messrs. Davidson and Smith and their associates. Davidson and Smith are known throughout Canada as a firm of grain dealers, who of late have acquired important newspaper publishing interests, their enterprises extending from the head of the lakes to the Pacific coast.

LARGE SUM IS SOUGHT FROM DOMINION PERMANENT LOAN COMPANY

G T. Clarkson, liquidator of the Dominion Permanent Loan Company, has caused to be mailed to the shareholders, numbering more than 1,100, a statement of the amount for which each is held to be liable. While there is no double liability as in the case of bank shares, many of the shares have been paid for in part only, and, in addition to calling for payment of the balance, the liquidator takes the position that shareholders must refund dividends paid for a number of years prior to the suspension of the company. Examination of the books showed that such disbursements had been made out of capital without having been earned.

It is roughly estimated that a million dollars may be secured from enforcement of the claims against the shareholders. Shareholders who desire to contest the claim are notified to file their defence before October 26th next and to appear before J. A. C Cameron, master-in-chambers, at Osgoode Hall at 2 p.m on Friday, November 1st, to show cause why they should not be listed among the contributories.

James W Bain, of Bain, Bicknell, stated recently that the pressing of the claims against the shareholders will not conflict with the joint action being taken by the shareholders and debenture holders in an effort to recover $2,000,000 from the estates of the former manager, F. M. Holland, and of four of the former directors, Christopher Kloepfer, Guelph; D W. Karn, Woodstock; T. P. Coffee, Guelph, and J R Stratton, Peterboro'.

E. J. HARVEY, Supervisor of Agencies.

North American Life Assurance Company

"SOLID AS THE CONTINENT"

HEAD OFFICE - TORONTO, CANADA

"I Wish I Had Taken Twice As Much!"

Nothing is more often repeated in letters received at our office than the expression "I wish I had taken twice as much insurance while I was about it." When endowments, dividends or cash settlements are paid, the assured very often acknowledges the remittance with that remark The truth is very few men take as much Life Insurance as they can reasonably carry—and repentance often comes when additional Insurance is not procurable. Probably every reader of this paper believes in Life Insurance and carries more or less of it but one should ask himself the question, **Am I Carrying as Much Insurance as I Can Afford?** If the policyholders who are now entering the Company could read the evidence of gratified policyholders and beneficiaries, they would make a great effort to increase the amount applied for—and existing policy holders would double the amount of their protection. "One word more": - What income would your present insurance yield the beneficiary at say 6%?

The Mutual Life Assurance Co. of Canada

Waterloo Ontario

On Their Merits Alone

There must be some good reason why so many hard-headed business men, when requiring insurance for business purposes, apply to The Great-West Life. "Sentiment" has nothing to do with the choice—The Great-West Policies are chosen on their merits alone.

Low rates and remarkably high profit returns are the reasons.

Information on request.

CANADA'S REMARKABLE BANKING RECORD

Canadian Banks Have Fully Justified Themselves—Status as Commercial Institutions is Maintained

BY W. W. SWANSON.

To those who have given attention to the question, Canada's record in the sphere of banking and finance presents a wonderful achievement. The chartered banks proved their adequacy to meet the responsibilities and obligations of supporting commerce and agriculture in days of peace, but no one knew what power they would show in grappling with the serious problems confronting them in such a testing time as we have had during the past four hard years. The record of the Canadian banks during this time is not merely an achievement—it is a veritable triumph.

Probably 90 per cent. of the business transactions of Canada are carried on through the use of credit furnished by the banks. Government currency plays an insignificant role in business affairs; and it will thus be seen what a heavy responsibility is placed upon our financial institutions. By means of the banks the future products of labor and capital are coined into a present means of payment, thus permitting the economic life of the nation to function efficiently and smoothly. For, contrary to general opinion, the banks do not accept deposits and loan accumulated funds, but rather accept the securities and notes of their customers to create a credit fund, and open up deposit accounts. At bottom, the business of banking is that of insurance; for the banks assume all the risk of the products of commerce and agriculture coming to the market, from the proceeds of the sale of which obligations are finally met. We are prone to accept this all as a matter of course; but it is obvious that the business of banking is of fundamental and vital import in the economic life of the nation.

Recently Mr. Pease issued a warning against the danger of making loans to non-productive and non-essential enterprises. He properly emphasized the necessity of taking care, first of all, of war requirements, and then of the really essential industries. A too rapid extension of credit carries with it the danger of inflation, and the menace of a future financial crisis. It is imperatively important to see that the assets of the banks are kept in liquid form, and that no speculative interests are promoted by them during the course of this struggle. Should one of our great banks make any misstep in this direction, it might imperil the entire structure of Canada's business life. Mr. Lloyd George, before the Canadian editors in London, stated that Canada had taken a quite phenomenal part in the munitioning of the allied armies, contributing not less than 55,000,000 shells and 45,000,000 cartridge cases, beside huge supplies of clothing and other essential war materials. It goes without saying—although it is all too frequently overlooked—that this remarkable work of Canadian manufacturers was made possible only by careful and efficient and daring banking. The chartered banks of Canada have lent loyal and undaunted support to the winning of the war.

One of the ablest governors of the Bank of England stated some time since, that the test of efficient and sound banking was to be found in the ability to differentiate between notes and mortgages. Canadian bankers have shown that capacity both before and during the war. As already remarked, it is a sine qua non of sound banking that assets be kept liquid. American National Banks indulged much more in financial, as distinct from commercial, banking than our own institutions in days gone by. They took part in purely speculative promotions, while our chartered banks have made it a practice to lend their support to productive enterprise, and the stimulation of commerce and agriculture. So careful have they been in drawing a sharp line of demarcation between financial and commercial banking, that the outbreak of hostilities found them in a strong position for meeting the hardest test ever given to a nation still in the pioneer stage of economic development.

While our banks have come to the support of every war loan, and are undoubtedly prepared to do so again and again, yet it should be realized that the business interests, as well as the agricultural community as a whole, should relieve them as far as possible of this necessity. We believe that Canadian government securities are as sound an investment, all things considered, as is to be found in the world to-day; but nevertheless, these securities are mortgages, and not liquid assets, in the same sense as are commercial notes. To protect investors and our national finances, it would be folly to permit these securities to be offered freely on the investing market. Our banks, therefore, should not have their funds tied up in such obligations, but should have all their resources left free to support productive enterprise. It is a matter of pride to all Canadians to know that sanity, efficiency and boldness have been the watchwords of the men who have achieved such telling results in the field of Canadian finance.

SHIPPING GROWTH IS SLOW

The September letter of the Alexander Hamilton Institute says:—

Despite new construction, British tonnage now amounts to only 15,000,000 tons against 18,500,000 tons before the war.

On both sides of the Atlantic the gain in ship construction over losses is slow. In July there was a decline in deliveries of completed ships and an increase in submarine losses as compared with June. The deliveries of new ships, however, were 85,000 tons more than losses. The reason there is disappointment over the shipping situation is that the public has been thinking in terms of the large launchings reported, whereas the figures below relate only to ships completely equipped.

Ship Deliveries versus Losses, in Gross Tons.

1918.	Allied and neutral losses.	Allied and neutral ship deliveries.	Net gain or loss.
January	354,715	156,734	— 197,951
February	386,637	243,273	— 143,364
March	401,463	368,997	— 32,466
April	313,415	291,188	— 22,227
May	357,534	493,469	+ 135,935
June	275,629	428,124	+ 152,295
July	313,011	398,176	+ 85,165

There is a considerable wait between the launching and delivery of a ship, and United States shipbuilders have been experiencing difficulty in getting valves, boilers and other accessories. Owing to this fact and to the shortage of labor and materials generally, Mr. Schwab argues strongly against building concrete ships and advocates large steel ships. He says:—

A hull is only about 60 per cent. of a ship, and the easiest part, too. We have had great difficulty in securing sufficient power. We are beginning to get out of the woods on that phase now, but we are in a desperate plight with regard to fittings. We have many hulls lying at docks or moorings waiting for the thousand and one accessories that we are unable to get.

If we were to build a lot of concrete hulls now we wouldn't have the accessories to fit them out or we would have to take them away from the wooden or steel ships to which we are committed, and so we would be wasting energy and labor without meeting the emergency.

Efficiency gains with size. A 7,500-ton steel boat, for instance, is more than 70 per cent. efficient. Averaging all our vessels up to date, I think the average tonnage will not exceed 6,000 tons. That is too little. From my own experience I would say that we ought not to be building less than 10,000-ton boats for trans-oceanic service.

The Shipping Board states that a ship of 9,000 tons carrying capacity, deadweight, is equivalent to other kinds of tonnage as follows:—

		Tons.
Deadweight, carrying capacity		9,000
Displacement, cargo deadweight	(9,000)	
Plus weight of hull	(3,000)	12,000
Gross tonnage, cubic contents		5,000
Net registered, deducting 2,000 from gross for crew and machinery space		3,000

The British Labor Congress, by a majority of five to one, on September 6th passed a resolution to the effect that the war has not changed the soundness of the principles of free trade, and urging upon the government the danger of imposing tariffs or imposts.

DECLINE IN MOOSE JAW ASSESSMENT

Falling Off in Civic Assessment and Revenue Has Been Balanced by Cutting Down of Municipal Expenditures—Debt Has Decreased

Moose Jaw's estimated population for 1917 is 19,000, according to the city commissioner's report which has just been published. The actual population according to the census of 1916 was 16,934. In 1901 it was 1,558. The city has not increased in area since 1913.

In 1917 the gross assessment was $31,801,499, and the debenture indebtedness, which according to statute is limited to 20 per cent. of the total assessment, was, therefore, $6,360,299. This limitation, however, applies only to the net debt and does not include debts contracted under the provincial public works act, local improvement debentures, etc. At December 31st, 1917, the gross debt was $5,734,003, which is under the allowances for the net debt. After deducting exempted debts the balance was $4,143,392. The increase in the gross debt of the city during the year, was just one-half of one per cent. The net debt, however, decreased by over one per cent. In 1905 the gross debt of the city was $193,000. By 1909 it was almost $1,000,000. In 1910 it had doubled and rose rapidly until 1915, since which year it has been held practically stationary. Most of the debt has been incurred on account of the water works system, the sewerage system, the electric light and power plant, city pavements, fire protection and sidewalks. Small amounts of this debt fall due during the present year and 1919, and over $150,000 in 1920. There are no large obligations falling due, however, until after 1929.

The city's assessment increased rapidly from $2,170,505 in 1905 to $9,996,964 in 1910. During the next year it made a phenomenal jump to $20,606,284, and in 1912 another increase of over 100 per cent., to $43,664,498. The maximum assessment was reached in 1913, being $51,997,286. Since that time it has fallen to $26,344,344. At the same time the net debt also increased very rapidly until 1915, since when slight reductions have been made. The ratio of assets to net debt is now just five, the lowest figure so far. The tax rate for 1917 is the highest thus far, being 27.70 for public school supporters and 33.40 for separate school supporters. The tax rate was lowest in 1912, when it was 10.80 and 11.20, respectively. This rapid increase in the tax rate during the past few years has, of course, been necessitated by the reduction in the assessments. Even with the higher rate, however, the total raised by taxation has fallen off considerably since 1913. This has been met to a large extent by reduction in expenditures. The erection of new public works practically ceased several years ago.

The city's principal source of revenue is, of course, the tax levy. Business licenses come second and the poll tax and miscellaneous sources also yield small amounts. There is, however, a deficit to be met on account of the electric light and power work of the city, and the city's hospitals. Of the 1917 tax levy of $798,014, 62½ per cent. was collected so that there is a balance of over $300,000 outstanding.

The city's statement shows a nominal excess of assets over liabilities to the amount of $2,515,064. Apart from the debenture debt outlined there are also bank loans, accounts payable and accrued interest, making total liabilities of about $6,500,000. The city's lands, buildings, permanent improvements and equipment are valued at $5,565,836. Other large sums consist of unpaid taxes, accounts receivable, cash on hand, etc.

BIG ORDER FOR CANADA CEMENT COMPANY

What is regarded as the largest single order for munitions that has come to any Canadian company from the United States government has just been placed with the Canada Cement Company. The amount of this exceeds $10,000,000. This order is for the larger shell that this company has been turning out for some time past, and involves the building of a new shop and other changes that will cost over $1,000,000. As in the case of the Lyall company, this expenditure will be guaranteed by the United States government, and if through any reason, as a stoppage of the war, the order is not filled, there is an agreement by which the cement company will be reimbursed for the capital expenditure on plant.

An order of this description is the more advantageous for the cement company than for most in Canada, as on the premises not only the machining is done, but also all the forging, and much of the steel is made. There is thus a profit on two complete operations and a partial one on the third. In the allowance for the shells there is sufficient to cover the cost of the new plant as well as permit a fair profit on the output.

While no definite plans have been made for after the war, the cement company will retain the steel plant and the forging plant, while the machine shop is regarded as a purely temporary branch of the company's business.

The receiving of a large order of this nature will mean some very respectable additional profits for the company, and it has been stated in the past that the cement business alone is sufficient to meet all fixed charges as well as costs of operations.

FARM LOANS IN THE UNITED STATES

Mortgages Outstanding Amount to Large Sum—Effect of Liberty-Loan Activity on Mortgage Company Operations

"There is no question about the adequacy of funds for farmers in the United States according to what I learned when amongst the farm mortgage bankers at their convention in Kansas City last week," said Mr. John Appleton, secretary of the Dominion Mortgage and Investments Association to *The Monetary Times* this week. "They are still unsettled as a result of the Federal Farm Loan system, but not so much as they were a year ago. A year's experience is but a moment in the mortgage business. To know what will happen to a security in the course of thirty years cannot be very well foretold, and those in the best position to judge have many years' experience at their back. But one year's experience has done much to modify the policy of the United States Farm Loan Bonds. It has become obvious to them that continued progress in getting out money, on the lines they have adopted, can only lead to irretrievable disaster, and in consequence the brakes have been put on. One of the Kansas City mortgage men tells me that the bulk of the government loans made in that state are upon land which a properly conducted lending institution would studiously avoid and the amount of the loans made in many cases exceeds the sale value. In Montana, a case was cited in which a company loan on a quarter section of $1,300 was displaced by one from the Federal Farm Loan Board of $3,500. The company did not rate its loan as a particularly good one either as to the security or the borrower. These are but one or two instances out of large numbers brought to my attention and they show clearly enough the inexperience of the men placed in charge of the system, and they also show how necessary it was to vigorously apply the brakes."

Farmers Have Not Profited.

"The farmers have not profited from the system any more than has the land speculator. The latter has utilized it to release money tied up in poor and unsaleable lands, and make it available for use in boosting values of good lands, the capital value of which to landlords has been increased. Under the Federal system they are able to borrow much more and at a less rate of interest than from the mortgage banker who must make his terms correspond to market conditions. The proceeds of his loan obtained on a 5½ per cent. basis can then be re-invested in government bonds, and the highest class of industrials yielding as high as 7½ per cent. Up to September the Farm Loan Board had put out $124,000,000, a large sum, but it is very doubtful if the net results are represented by as much as a cob of corn in the way of increased production. Easy borrowing leads to luxury—limousines in place of sardine cans, with electric starters, and to the ease of city apartments rather than to morn till-eve toil on the land. This tendency the mortgage bankers deplore."

Extent of Mortgage Business.

"Was anything said," asked *The Monetary Times'* representative, "about the extent of the mortgage business in the States."

Mr. Appleton said that that phase of the problem was discussed. "Carefully made estimates," he said, "place the farm mortgage outstanding at $4,600,000,000. Compared with $124,000,000 of Federal Farm Loans, the sum is large, and the field for the private lender is large. Then again the farmer over there does not take kindly—I am referring to the one ambitious to be a landlord or owner of his own acres—to a debt hanging over him for 40 years. Given a good year he will pay off his loan. It is this class that apparently prefers to deal with the bankers. They can assist him in other ways, particularly through local banks in which private mortgagees are interested to so great an extent."

Effect of Liberty Loan.

Asked as to whether the Liberty Loan activity had interfered with operations of mortgage companies, Mr. Appleton replied that it had, and very materially. "The institutions," he said, "which buy mortgages aggregating into millions, are desirous of reserving funds for the use of the government. In consequence the demand for individual mortgages is light and large ones—those over $10,000 are not wanted. This has resulted in a development of the collateral trust mortgage bond. That is, large mortgages are divided up into portions more readily marketable. As to the Liberty Loan the mortgage bankers are squarely behind it, although some of the proceeds may be used unjustly to undermine their business. They are among the leaders in making provision for the government's needs. There is no reservation in their attitude."

Convention Largely Attended.

Mr. W. G. Styles, of the Saskatchewan Mortgage Loans Association was also a delegate to the convention, and made an address in which he fully reviewed recent developments in the mortgage field in Canada. There were about 250 representative bankers at the convention. One of the speakers, Hon. W. M. Bullit, formerly solicitor general of the United States, held that the Federal Farm Loan Act was ultra vires of the powers of Congress, and when a suitable case arises, action will be taken. In this opinion he has substantial backing.

FIRE UNDERWRITERS HOLD SESSION IN NEW YORK

The president, the Montreal and Toronto vice-presidents and secretaries and a committee of the Canadian Fire Underwriters' Association were in session last week in New York. That was the first time Canadian Fire Underwriters have been in New York to conduct their business, and this was done to facilitate the presence of some of the executive heads of United States companies. The meetings were held at the Waldorf-Astoria Hotel and took the whole of each day.

The business was largely to try and deal with agents' commissions, which have been attacked by the Canadian Manufacturers' Association as too large a burden on the premiums. At the investigation of the fire insurance business in the province of Ontario, recently conducted by the provincial government, the companies admitted that the commissions in the city of Toronto are too high, but that this was due to the influx of new companies gradually increasing the terms in trying to get a good start. This led to suggestions of the legislature taking a hand to restrict the expense, and both companies and agents have had conferences, but no unanimity could be reached.

If the association cannot agree on a satisfactory solution, it is face to face with the threat that the legislature will settle the question, and in a way that may neither suit agents nor companies. The deliberations of the meeting will be compiled by a small executive committee and come before the next meeting of all members of the Canadian Fire Underwriters' Association.

Terms for subscription to the fourth Liberty Loan, announced by the treasury, require a 10 per cent. payment on application instead of 5 per cent. as for the three preceding issues. Another change is the arrangement of payment in four instalments instead of three. Twenty per cent. will be due November 21; 20 per cent. December 19; 20 per cent. January 16; and 30 per cent. January 30. The setting of the last instalment of 30 per cent. as late as January 30 is interpreted as assurance that the fifth Liberty Loan will not be floated before late in February or possibly March.

New Record of Bank Deposits

August Total of Savings Deposits Exceeds Previous Record of December, 1917—Falling Off in Call Loans Abroad—Growth of Circulation Continues—Demand Deposits have also Increased Substantially—Statement as a whole Reflects Strength of Financial Position but Stringent Market Conditions.

	August, 1917.	July, 1918.	August, 1918.	Year's Inc. or dec.	Month's Inc. or dec.
Deposits on demand	$439,995,259	$549,068,651	$554,906,517	+ 26.2	+ .9
Deposits after notice	952,591,821	992,015,137	1,014,711,865	+ 6.5	+ 2.2
Current Loans in Canada	836,429,670	905,677,233	920,775,269	+ 10.0	+ 1.7
Current loans elsewhere	87,082,849	99,702,919	101,551,546	+ 16.0	+ 2.0
Loans to municipalities	43,940,176	56,589,173	56,662,931	+ 30.2	+ .13
Call loans in Canada	71,204,351	74,382,762	73,509,571	+ 2.8	— 1.4
Call loans elsewhere	178,610,605	167,112,836	160,544,990	— 10.1	— 4.2
Circulation	156,450,659	198,779,395	202,489,039	+ 29.4	+ 2.0

THE above are the principal figures of the Canadian banks, as given in their statements to the Dominion government for the month of August, 1918. Among the features of the statement are the increases for the month in savings deposits, circulation and current loans outside of Canada and the decline of call loans abroad. Certain extensive changes are indicated as compared with one year ago, such as the increase of 30 per cent. in loans to municipalities, of almost 30 per cent. in circulation, and substantial growth in each of the other departments mentioned above except call loans elsewhere than in Canada.

The following table gives record of deposits for the past thirteen months:—

	Deposits payable on demand.	Deposits payable after notice.
1917—August	$443,317,275	$806,774,687
September	451,749,532	965,393,541
October	495,058,449	985,790,850
November	538,869,362	1,008,657,874
December	569,441,871	995,978,013
1918—January	559,777,237	900,314,256
February	565,266,642	908,822,988
March	561,042,236	921,080,803
April	558,509,221	933,644,668
May	535,655,731	947,757,337
June	549,327,078	965,934,556
July	549,068,651	992,015,137
August	554,906,517	1,014,711,865

The increase of the month was $22,700,000. It will be observed that the increase shown by the July statement was more, being $26,000,000. However, a new high record has been established, and two more months' business is yet to be recorded before any payments are to be made on account of the 1918 Victory Loan.

The course of the deposits account during the past six years is shown in the following table:—

August.	On demand.	After notice.	Total.
1913	$358,321,925	$619,032,847	$ 977,354,772
1914	338,984,418	659,399,151	998,383,569
1915	334,022,174	692,580,626	1,026,602,800
1916	443,317,275	806,774,687	1,250,091,962
1917	439,995,259	952,591,821	1,392,587,080
1918	554,906,517	1,014,711,865	1,569,618,382

The total for the present year is, therefore, again far in advance of previous years. The increase in savings deposits during the past five years has been about 66 per cent., while that of demand deposits has been about 60 per cent.

The trend of the Canadian loans account for the past thirteen months is shown in the following table:—

Loans	Current in Canada.	Call in Canada
1917—August	$836,429,670	$71,204,351
September	855,306,953	72,421,187
October	883,986,860	71,653,719
November	868,973,714	72,178,345
December	858,533,298	71,779,020
1918—January	855,506,506	76,239,201
February	859,363,147	76,722,163
March	886,995,222	74,257,877
April	884,089,402	77,497,360
May	894,817,113	78,466,582
June	897,226,012	76,970,920
July	905,677,233	74,382,762
August	920,775,269	73,509,571

The increase in current loans in Canada is quite the largest recorded in several months; call loans, however, continue to fall off.

Of the deposit in Central Gold Reserves $14 210,000 is in gold coin: the balance is in Domininn Notes.

The following table shows the call loans abroad in August as compared with previous returns:—

	1915.	1916.	1917.	1918.
January	$ 85,706,641	$134,248,552	$155,747,476	$132,687,066
February	89,890,982	139,138,651	162,344,556	160,239,494
March	101,938,685	141,889,989	161,616,735	167,296,701
April	121,522,971	147,146,443	150,156,054	170,818,531
May	136,098,835	163,400,659	168,692,675	172,259,879
June	124,604,875	[illegible]	[illegible]	170,014,470
July	117,821,174	177,121,733	151,875,676	167,112,5[illegible]6
August	120,607,677	171,380,353	178,610,625	160,544,000
September	135,108,412	173,877,586	166,480,004	....
October	120,681,624	189,346,216	151,018,747	....
November	145,530,562	181,250,380	139,832,552	....
December	137,157,869	173,878,134	134,483,482	....

The present falling off movement in the volume of call loans abroad has continued for several months, but the decline this month is somewhat larger than usual.

The following table shows the course of the principal loan accounts during recent years:—

August	Current loans in Canada.	Current loans elsewhere.	Call loans in Canada.	Call loans elsewhere.
1913	$857,882,613	$ 46,339,208	$67,233,983	$ 90,041,292
1914	836,574,000	47,314,832	69,229,045	96,405,473
1915	758,342,735	44,968,445	71,855,565	120,607,677
1916	739,938,513	66,556,371	86,351,216	171,380,353
1917	836,429,670	87,082,840	71,204,351	178,610,625
1918	920,775,260	101,551,546	73,500,571	160,544,000

Dominion Government--August, 1918

LIABILITIES

Loans from other banks in Canada secured, including bills re-discounted	Deposits made by and balances due to otherbanks in Canada	Due to banks and banking correspondents in the United Kingdom	Due to banks and banking correspondents elsewhere than in Canada or the U.K.	Bills payable	Acceptances under letters of credit	Liabilities not included under foregoing heads	Balances due to the Imperial Government	Total Liabilities	Aggregate amount of loans to directors, and firms of which they are partners	Average amount of current gold and subsidiary coin held during the month	Average amount of Dominion Notes held during the month	Greatest amount of notes in circulation at any time during the month

T. C. BOVILLE, *Deputy Minister of Finance.*

BRITISH COLUMBIA MUNICIPAL TAX ARREARS

At the convention of the Union of British Columbia Municipalities held last week in Penticton, B.C., Mr. Robert Baird, municipal inspector, presented some significant figures.

"In 1917," said Mr. Baird, "the municipalities obtained a revenue of $10,700,000, and expended in uncontrollable expenditures such as sinking funds and bond interest more than $9,000,000, leaving about $1,500,000 for ordinary expenses of municipal administration. Yet in the year they spent $3,744,000 on these ordinary expenses, thus showing an over-expenditure of more than $2,000,000."

He showed also that while the arrears of taxes of British Columbia municipalities had amounted to less than $6,000,000 in 1914, by the end of 1917 they had swelled to almost $14,000,000.

Four years ago the municipalities of the province were confronted with problems resulting from reaction after a period of abnormal expenditure. They came to a sudden realization of their indebtedness, and the fact that tax payments were ceasing. Mr. Baird conveyed the impression to his hearers that it was high time the municipalities again took their bearings with a view of bettering their positions.

It's common sense to save the pence.

It is an economic maxim that sudden prosperity leads to injudicious spending. Speaking generally as a nation, we are spending like so many drunken sailors intoxicated with our good times.

1918—VICTORY LOAN BULLETIN—1918

CAMPAIGN NOTES COMMITTEE REPORTS PERSONAL MENTION

The Editorial Department will be pleased to receive and publish each week items of news for this page.

SAVING INSURES AGAINST ADVERSITY

The uncertainties of the future should induce all to save. Business skies are blue to-day, but no one knows what they may be to-morrow. Thrift is the best insurance against adverse conditions. It is also the cheapest insurance. It costs nothing and all may exercise it. What Canadian is there to-day who cannot save something? Even in war-torn France people save. How much more should they do so in Canada? Not to save is for Canadians to lose out in the race for business following the war. They must provide their own capital, which necessitates saving. Save for Victory.

REGINA DIVISION GETS INTO ACTION

Regina's big offensive in connection with the forthcoming Victory Loan campaign was gotten under way at a meeting held in the city on September 28th for the purpose of completing the organization of the Regina division. All parts of the Regina division were represented. Mr. R. G. McCuish, convener of the committee, presided.

Regina, it is understood, will have a fair share of the burden of the loan to carry, and as a result, the officials are desirous that the work of organizing for the campaign should be completed at an early date. The division will be divided into subdivisions and the subdivision organization will be undertaken at once. The division covers a big territory, and a large number of towns, villages and municipalities are included in the district.

NEW WESTMINSTER TO BUY VICTORY BONDS

The city of New Westminster will probably subscribe $75,000 to the next Victory Loan. This probability was touched on at the city council meeting on September 23rd, when a communication on the subject of the forthcoming campaign was referred to the finance committee for report. Ald Johnston, chairman of the finance committee, stated that there will be about $75,000 of sinking funds available for an investment of this nature, and as the council's policy for several years has been to invest in government issues to the extent of the sinking funds available, there is no reason to suppose that a departure will be made at this juncture.

The city at present holds Canada War Loan bonds to the extent of $340,000. Three subscriptions have been made in succeeding years, and last year these holdings were consolidated in bonds of the last issue.

At a conference held in Yorkton on September 25th, the Yorkton division was organized for the 1918 Victory Loan. Confidence was expressed that the objective of a million and a half dollars would be attained. Delegates were present from all parts of the province.

Mr George M Reid has been chosen by the minister of finance to head the London Victory Loan organization, and his acceptance has been announced. Mr. Reid was one of the chief lieutenants of the late Sir George C Gibbons in the last campaign, when nearly $7,000,000 worth of bonds were sold in London

TO OPEN LOAN CAMPAIGN

Sir Thomas White left on October 4th, for Winnipeg, where on October 8th he will open the Victory Loan campaign. The minister will give facts and figures to show how the country's war activity and the volume of its war business is predicted upon the success of the Victory Loan. The objective of the loan is $500,000,000. Sir Thomas, after speaking in Winnipeg, will go to Saskatoon and then to the coast. On the way back he will speak at Edmonton, Calgary and Regina.

SASKATOON PREPARING FOR VICTORY LOAN DRIVE

Saskatoon division organized on September 26th, for the forthcoming Victory Loan campaign. A strong executive was appointed, and the division was divided into twenty-one subdivisions. The following will represent their respective subdivisions on the central committee for the Saskatoon division:—

Saskatoon city, W. A. Porteous, J. M. McKay, F. R. McMillan, R. R. Morgan, J. J. Leddy, T. D. M. Osborne, Harley Henry, L. M. Bidwell, A. H. Hanson, J. D. Miller; and these for the districts Delisle, W. S. Morgan; Rosetown, P. Murphy; Kindersley, Judge Baldwin; Biggar, Dr. S. A. Shaw; Wilkie, J. H. Galloway; Unity, Humphreys; Kerrobert, J. D. Rodney; Dodsland, J. R. Reader; Young, C. E. Matterly; Humboldt, Mayor R. Telfer; Lanigan, Mayor Calver; Henley, J. L. Gessell; Dundurn, W. S. Fisher; Vonda, J. H. Currie; Aberdeen, Wm. S. Lawrence; Warman, F. J. Pierce; Perdue, J. H. Reid; Asquith, C. E. Davis; Kinley, R. J. Wells; Langham, J. Beaton.

PRESS TO GIVE VICTORY LOAN UTMOST SUPPORT.

As a result of a conference between the editors and publishers of Manitoba, in the Royal Alexandra Hotel, Winnipeg, on September 27th, the fullest support of the press of the province was pledged for the Victory Loan campaign. Mr. J. W. Dafoe, chairman of the Victory Loan press news and feature committee of Manitoba, presided. Addresses were given by A. L. Crossin, vice-chairman of the Manitoba Victory Loan committee, and J. A. Anderson, secretary of the latter body. Prior to the adjournment a committee was selected to co-operate with the Central Press organization in Toronto.

The following Winnipeg members were approved of by the meeting: J. W. Dafoe, chairman; Knox Magee, R. L. Richardson, F. C. Pickwell, W. J. Healey, Norman Lambert, H. F. M. Ross, G. W. Prout, Robt. Lipsett, F. E. Troutman, John Stovel, G. H. Saults, J. J. Vopini, Frank Dyaak, and G. F. Chipman.

The representatives from the different Manitoba districts were elected as follows: T. Beveridge, Melita; H. J. Monteith, Killarney; W. J. Rowe, Manitou; H. B. Ballantyne, Emerson; L. McLaughlin, Virden; C. H. Cowie, Carberry; N. Hewitt, Holland; D. Cannon, Minnedosa; T. McIntyre, Russell; Alex. Dunlop, Neepawa; J. Blackey, Grandview; A. S. Weir, The Pas; G. R. Porter, Portage; J. A. Stratton, Stonewall; R. W. Stewart, Selkirk; A. H. Tremauden, Beausejour; and J. B. Whitehead, Brandon.

Mr. N. H. Stevens has again been selected chairman for the forthcoming Victory Loan campaign for Kent County. Five vice-chairmen have also been selected.

THE WAR AND WHEAT PRICES

The remarkable series of important victories recently won by allied arms in France, Palestine and Macedonia has strengthened the general conviction that the overcoming of enemy resistance is now within measurable distance. Many observers consider it quite probable that the war will have concluded before the year 1919 has far progressed. If these expectations are realized, immediate relief would be experienced by the market for government bonds. One would expect that the securities of Great Britain, United States, Canada, France and other allied countries would show appreciation in value; but, even if the quotations did not at once rise sharply on its becoming clear that peace was in sight, the market would nevertheless be relieved from the necessity of providing for vast continuous or successive issues of new bonds. The business community in general would also find some relief in the prospect of the removal of certain of the special war taxes, which have proved to be particularly burdensome. While it is recognized that the legacies of the war will be such as to prevent any great immediate reduction of taxation, steps can be taken when peace returns in the direction of readjusting the load, so that Canadian trade and industry can continue to develop satisfactorily as in past years.

The whole Dominion is profoundly interested in the question as to how prices of agricultural products will be affected by the termination of the war. Western Canada in particular is giving much thought to this matter. If grain prices then are such as to yield the farmer a satisfactory profit, it is certain that the accessible unoccupied fertile lands of the West will be quickly brought under the plow. That would mean, in all probability, a steady and rapid growth, not only of the farming population, but also of the western towns and cities; it would mean, also, a rapid rise of the West's production, representing increased wealth for the Dominion. On the other hand, an era of discouragingly low prices for wheat would have a tendency to check the growth of the western provinces and keep down their production. However, it can be said that the situation as at present existing does not point to disastrous cuts in wheat prices when the war is ended. It is, of course, to be expected that with the return of peace the demand for some commodities which we have been exporting actively will cease entirely; and probably some of the keenness or insistence in the demand for grain and other articles of commerce will be missing, thus tending to cause decline in prices. But it is well known that there is a great shortage of the world's supply of foodstuffs, and, owing to the devastation and destruction caused by the war, it will certainly be several years before the general production can be brought to an equality with the world's needs. During that period, at any rate, Canadian farmers are likely to get prices for their wheat which will yield them satisfactory profits.

So it appears likely that, apart altogether from the uncertainties regarding termination of the war, agriculturists here and in the United States can go ahead and seed their land with reasonable confidence that when the harvest of 1919 matures prices will not be on an unprofitable basis. Since the extremely high prices came in, early in 1916, the western Canadian farmers have not been so fortunate as to have a bumper crop. While the crop of 1915 broke all records, most of that was sold before prices reached the $2 level. In 1919, if labor difficulties can be overcome, there will be another chance for the combination of a large yield and high prices.

BRITISH COLUMBIA'S MUNICIPAL CHANGES

Principal among the provisions of the proposed changes in the Municipal Act of British Columbia is the establishment of a Local Government Board, which has been favorably considered by the provincial administration. The proposal is to have it and the public utilities commission combined to save extra machinery, and while the government would escape certain duties which would be performed by the board, it would assume the responsibility. The new act is designed to give municipalities almost carte blanche in legislation under the supervision of a local government board, the proposal being that they would not need to go to the legislature year by year to obtain powers to pass by-laws to meet new conditions which may arise. This is practically transferring to municipalities the legislative powers which are now centred in the legislature itself.

With wider powers, councils will be able to initiate measures, and, after submitting them to the board, put them to the people to be decided. In this way, every financial or other scheme would receive full consideration before it was finally passed. One of the radical changes of the new act will be to eliminate police commissioners, the councils doing the work, and a system of county crown attorneys will be set up. This will give the attorney-general more power in this field. The local government board will fix the number of policemen in each municipality.

The innovation has met with the approval of the United British Columbia Municipalities which met in Penticton a week ago, and is viewed with favor by business men generally. At first view, it may be thought that the powers to be conferred are rather great, but the same has been thought in other instances, but it was found that everything worked out satisfactorily. It is considered that the establishment of a board of this nature will be of value in promoting financial stability, and the fact that it will be active all the year round will be of immense benefit to municipalities. The board will no doubt have power to settle difficulties existing between adjacent municipalities, who will have the privilege of putting their case before it and thus obtain immediate settlement. The objection has been raised in one or two instances of the local government board and the public utilities commission being combined, but it is regarded by others that not only will extra machinery be saved but the board will have a greater insight to municipal problems by reason of the matters which will come up.

Every time you purchasers of Victory Bonds read of what Canadians are doing in France, you can truthfully say, "I had a hand in this—It is partly my work."

FIGHTING THE FIRE DRAGON

October 9th is to be observed as fire prevention day in the Province of Ontario. This action is taken in cooperation with a similar observance in many of the United States, and the propaganda work in Ontario is undertaken by the Provincial Fire Marshal's office. Public appeals are being made in every possible way, and the organization of the schools will be utilized to impress upon the children of the province the destructibility of fires and the necessity of preventing them. The Ontario government is also operating through a Fire Prevention league, which was formed a month ago; through this organization those directly or indirectly interested in the work are enabled to co-ordinate their efforts with those of the fire marshal.

Preventive work of this kind is something new in Canada, but a similar league is being planned in British Columbia. The action is stimulated by very heavy losses of late years in Canada, and more particularly during the nine months of this year which are already past. Canada's fire losses are unquestionably too heavy, and many of the fires can be prevented. In comparing statistics of fire losses here with those in European countries, however, it is well to remember that our property wealth per capita is much greater than that of those countries, and our loss of property by fire would, therefore, be expected to be proportionately greater. However, when this allowance is made, our showing is still quite unfavorable.

While every one admits the necessity for fire prevention, opinions as to ways and means are not so unanimous. It is already apparent, however, that no single measure will prove fully effective. Effort, it seems, must be individual, corporate, and public, and must be stimulated by the sense of monetary loss and gain, as well as the more remote advantage of national interest. There must be no such thing as over-insurance, because where this is permitted the advantage of the property holder at once comes into conflict with that of the public. Insurance companies have everything to lose by any laxness in this direction, and their constant effort is to prevent over-insurance. They are not, however, concerned with the volume of fire loss as a whole, because their profit is derived from a margin over and above losses, and rates are fixed accordingly. If losses are increasing while rates are fixed, they will, no doubt, incur temporary loss, and vice versa; but ultimately rates will be determined by the proportion of loss to property insured, plus a margin for dividends and the cost of management.

What can be done by public action remains to be seen; it is unfortunate that in work of this kind there is no accurate means of checking up the return on money expended. Efforts of this kind by states across the line have, however, already met with appreciable success, and unquestionably Canada offers an excellent field of opportunity for work such as Ontario has initiated.

At a meeting of the citizens of the rural municipality of Victoria, held at Holland, Man., called by G. H. Balls, organization manager for the district, it was decided to organize and assist in every way. The following executive committee was appointed:—J. J. Staples, A. W. Goulding, W. R, Ross, W. H. Wiggins, D. Evans, F. H. Dagg, Alf. Smith, D. J. McGowan, Wm. Jeffrey, Wm. Turner, Chas. Hooper, Jos. Morrow, Donald Carnegie, Rev. H. Heynen, J. Langman, Alex. Sundell, Wm. Tuckwood, A. K. Berry, E. Barnville and F. H. Campbell. J. Rinn was chosen publicity manager.

PERSONAL NOTES

Mr. Albert Vickers, chairman of Vickers, Limited, has resigned.

Mr. C. W. I. Woodland, manager for Canada and Newfoundland, of the Employers' Liability Assurance Corporation, is at present making a business tour of the western provinces

Mr. Wm. H. Moore, secretary of the Canadian Northern Railway, has resigned. Mr. R. P. Ormsby, who formerly held the post of assistant secretary, has been appointed to succeed Mr. Moore.

Lieut.-Col. F. H. Deacon, of Messrs. F. H. Deacon and Company, bond brokers, Toronto, has been appointed chief inspector of military accounts for the Dominion of Canada. Latterly he has been assistant deputy-inspector of accounts in Eastern Canada.

Mr. George A. Kingston, commissioner of the Ontario Workmen's Compensation Board, has been elected president of the International Association of Industrial Accident Boards. The convention of this association was held in Madison, Wisconsin, the last week in Septemper. Among the papers read was one by Mr. T. Norman Dean, statistician of the Ontario Workmen's Compensation Board.

Mr. Walter J. Barr, president of the Goldsmiths Stock Company of Canada, Limited, last week celebrated the fiftieth anniversary of beginning his business career in Toronto. In celebration of this he very graciously donated $6,000 to various Toronto institutions. Mr. Barr has had the unique distinction of putting in this half century of business experience within the confines of the short city block between Jordan and Yonge Streets, on Wellington Street. Commencing as junior clerk he, in process of time, became the president of what is the oldest established wholesale jewelry and watch business in Canada, it having been successfully operated for over eighty-one years.

FORTY-ONE YEARS IN BANKING BUSINESS

Mr. A. R. Capreol, after forty-one years in the service of the Imperial Bank of Canada, latterly as manager of the Yonge and Queen Street branch, has retired. He was very popular in business and social circles, but since his son was killed in France he has never been the same man. During the past two years his health has been very poor, and about four months ago he practically gave up business entirely.

A. R. CAPREOL.

Mr. Capreol will be succeeded by Mr. A. R. Martin, who is at present manager of the Toronto branch of the Imperial Bank of Canada.

INVESTMENTS AND THE MARKET

News and Notes of Active Companies—Their Financing, Operations, Developments, Extensions, Dividends and Future Plans

Provincial Paper Company.—The company is in a strong operating position. At its own mills at Georgetown, Thorold and Mille Roches there is a plentiful supply of pulpwood on hand. In fact so well placed is the company as regards pulpwood that it will be unnecessary to cut at all this winter, a full year's supply being available either at its own mills or at the Port Arthur Pulp and Paper Company, which is controlled by the Provincial Paper.

The company is at present operating slightly better than a year ago, the output running at about the same. Prices of the company's products show little change from a year ago, and for the nine months period ending this month earnings are correspondingly good.

Nipissing Mining Company.—The company on October 21 will disburse profits of 10 per cent. to its shareholders. The disbursement will be in the form of the regular 5 per cent. dividend and a bonus of 5 per cent., making in all $600,000. This will bring the total paid this year up to $1,500,000. The financial position of the Nipissing is the strongest in the company's history. Cash in bank, Canadian and United States war bonds, value of ore on hand and in process, and bullion ready for shipment amount to $3,720.923. This compares with $3,472,021 three months ago. Including the dividend payable in October, the total disbursements of the Nipissing since going on a dividend basis on July 20, 1906, amount to $17,640,000. Total production to date amounts to around 51,000,000 ounces of silver, with a value of approximately $30,561,827.17. This is not far under one-sixth of the entire production of the Cobalt camp.

Canadian Allis-Chalmers, Limited.—It is expected that the company in 1918 will earn net before taxes at least $10,000,000. Recent months have shown profits at the rate of over $11,000,000. In the fiscal year to December 31 last Allis-Chalmers earned $4,749,102 before taxes, so that the promise of 1918 is for a net before war taxes 110 per cent. larger than last. The quarterly reports of Allis-Chalmers, like those of Midvale Steel and certain other companies, do not show the reserve for taxes, nor do they make it entirely clear that the net as published is after a set-up for taxes that in 1918 will probably reach $5,000.000, or substantially 50 per cent. of anticipated earnings. Allis-Chalmers has not expanded its gross sales as rapidly as Worthington Pump for example, but its failure to do so is purely a reflection of labor shortage.' Given ability to run double shifts, Allis-Chalmers could easily produce at an annual rate of $70,000,000, instead of the present $36,000,000.

RAILROAD EARNINGS

The following are the earnings of Canada's transcontinental railways for the first three weeks in September:—

Canadian Pacific Railway.

	1917.	1918.	Inc. or dec.
Sept. 7	$2,666,000	$3,053,000	+ $387,000
Sept. 14	2,691,000	2,915,000	+ 224,000
Sept. 21	2,964,000	3,114,000	+ 150,000

Grand Trunk Railway.

Sept. 7	$ 992,613	$1,346.536	+ $353 923
Sept. 14	977,154	1,415,000	+ 437,846
Sept. 21	1,037,721	1,458,812	+ 421,091

Canadian Northern Railway.

Sept. 7	$ 715,800	$ 901,000	+ $185,200
Sept. 14	751,300	873,900	+ 122,600
Sept. 21	770,200	916,100	+ 145,900

Free-spending on your part means stinting those who do the fighting.

DIVIDEND NOTICE

The Bank of British North America

Incorporated by Royal Charter

The Court of Directors hereby give notice that an interim dividend for the half year ended 31st May last, of Forty Shillings per share, less Income Tax, being at the rate of eight per cent. per annum, will be paid on the 5th day of October next to the Proprietors of shares registered in the Dominion of Canada.

The Dividend will be payable at the legal par of exchange on the 5th day of October next.

No transfer can be made between the 21st instant inclusive and the 4th proximo inclusive, as the books must be closed during that period.

JACKSON DODDS,
Secretary.

MARKETING CANADA'S GRAIN

An Address Delivered at the Annual General Meeting of the Winnipeg Grain Exchange

BY W. R. BAWLF,
President, Winnipeg Grain Exchange.

At the annual meeting of this exchange last year my predecessor gave a sketch of the main effects of the war upon the grain trade of this continent. With your permission, I desire to continue the story commenced by my predecessor, and to note briefly how the grain trade at Winnipeg was affected during the year.

I wish to begin by reminding you that the Board of Grain Supervisors for Canada did not attempt to regulate the marketing of coarse grains. As you know, the United States authorities did not fix the prices of coarse grains, and it would be difficult for Canada to fix the price of, for example, oats, so long as the price was not fixed in the United States. In addition to that, the Canadian government did not provide a buyer for coarse grains, and our experience during the past year has shown that if the price of any grain is to be fixed, provision must be made so that some buyer will take the grain at the fixed price, and provision must also be made for carrying charges. No such provision had been made in Canada.

Owing to the congestion of the railways in the United States during the winter months, the prices of coarse grains in the United States varied rapidly and considerably, and these variations were regarded by some as due to speculation in the grain exchanges. It is now, I think, very generally conceded that the trouble during the past winter was one of transportation, and not one of speculation in the markets. To some extent the trouble was perhaps enhanced by the policy of the United States in regard to substitutes for wheat flour. This policy resulted in an increased demand for coarse grains, and that at a time when the railways were badly congested. As the prices of coarse grains went higher, there was considerable demand on both sides of the boundary line for government regulation of the marketing of the coarse grains. The United States authorities, however, declined to fix prices on grains other than wheat, and declined to interfere in any drastic way with the commercial methods of marketing coarse grains. Indeed, it is not incorrect to say that the United States Food Administration relied upon the grain exchanges to prevent, or minimize, undue speculation, and this is the policy adopted by the United States for the coming year, so far as coarse grains are concerned.

The same policy was followed in Canada. So far as Winnipeg is concerned, the marketing of coarse grains during the past year has not been regulated by the government through the Board of Grain Supervisors. It has been, however, to some extent controlled by the council of the grain exchange itself. What was done in this market in regard to coarse grains during the past twelve months was done by the council of the grain exchange and its committees, and such regulation as was put into force by the council of the exchange was caused chiefly by the movement of prices in the United States, and this, in turn, as I have stated above, was due chiefly to transportation congestion, and partially to the increased demand for coarse grains. The council of the grain exchange did not seek to interfere in any way with legitimate trading in coarse grains. Its whole purpose was the prevention of anything in the nature of undue speculation, which, in the opinion of the council, would have been been most undesirable, if not most prejudicial, to the permanent interests of the exchange.

Wheat.

The marketing of wheat during the past year was controlled to some extent by the Canadian government through the Board of Grain Supervisors. I wish particularly to remind you that the power given to the Board of Grain Supervisors was a limited power. The board could fix the price of wheat, and in order to make the price effective it could commandeer wheat. It could also provide for carrying charges, but it could do very little more. If you compare the powers of the board with those vested in the corresponding body in the United States, you will appreciate what I mean. The United States authorities could negotiate with the representatives of the allied governments; could specify the place at which the allied governments should accept delivery of the wheat; could purchase wheat and sell it to the agents of the allied governments, or to mills; and could determine all the conditions of such delivery. In other words, when the allied governments decided to create an agency for the purchase of grain in the United States, the United States government decided to reply by creating an agency supported by the United States government to negotiate with the agents for the Allies. They took this step on the simple ground that if the allied peoples were to buy through a government body, the United States producers and dealers should be able to sell through a government body, and in this way they could properly protect and safeguard United States interests. An individual is at a disadvantage in negotiating with a government. Individuals in the United States would have been at a disadvantage in negotiating with the body that represented Great Britain, France and Italy. Consequently, the United States government interposed a grain corporation, and the representatives of the allied governments had to deal or negotiate with the representatives of the United States government, and they had to negotiate not merely about the price of the grain, but about everything connected with the marketing of grain.

In the United States, therefore, there was a United States government body which controlled the marketing of all grain and grain products in the United States. That corporation can buy grain if necessary, but one of its main objects is undoubtedly to negotiate with the Wheat Export Company, and thereby arrange for the export of grain and grain products. In the United States, therefore, dealers, millers and all connected with the marketing of grain are not compelled to accept the control of any commission or board sitting in London. In Canada, on the other hand, apart from the fixing of the price by the Board of Grain Supervisors and from such arrangements as are made necessary by the fixing of the price, there was during the past year no body competent to perform the functions performed by the United States Grain Corporation. The result is that, apart from the fixing of the price, the control of the marketing of Canadian grain was not in Canadian hands. It was in the hands of the Wheat Export Company, acting under instructions received from either the British Royal Commission or some other body in England.

This led to some rather strange developments during the past year. Through the winter months it became practically impossible for any shipper other than the Wheat Export Company to get a car for the hauling of wheat east all-rail. Just how this situation arose it is difficult to say, but the result of it was not hard to understand. The result was that Canadian firms who had been in the business of shipping and forwarding grain for many years could no longer ship a carload of Canadian wheat to a Canadian mill east of the Great Lakes, and this domestic business fell into the hands of the company representing the allied governments.

During the winter months there was an insistent call from the allied communities for wheat. The Board of Grain Supervisors commandeered wheat at various points in the west, ordered it into the government elevators at Calgary, Saskatoon, Moose Jaw and Winnipeg, to be delivered there to the Wheat Export Company for shipment to the seaboard. Although the climatic conditions were not favorable for rail transportation, a considerable quantity of wheat was in this way forced to the seaboard and shipped across the ocean. This all-rail shipping in midwinter is rather expensive, and the commandeering and diversion meant a considerable disturbance of commercial methods, but we can console ourselves with the thought that we were responding to very urgent appeals from the allied communities, and we do not grudge either the expense or the disturbance if thereby we were meeting a real need amongst the Allies in Europe.

When navigation opened there was not a large quantity of wheat left and the arrangement made for the supply of wheat to the eastern mills through the Wheat Export Company was continued, so that for the first time in the history of the Dominion, and for the first time since the war broke out four years ago, Canadian firms could not sell a cargo of wheat to Canadian mills east of the lakes.

The story, therefore, of the marketing of western wheat during the past year is a short and simple one. The government, through its board of supervisors, fixed the price and the carrying charge. The wheat was delivered to the representatives of the Allies, Fort William. This was applied not only to the wheat exported, but also to the wheat consumed

AN ALLIANCE FOR LIFE

Many of the large Corporations and Business Houses who bank exclusively with this institution, have done so since their beginning.

Their banking connection is for life—yet the only bonds that bind them to this bank are the ties of service, progressiveness, promptness and sound advice.

236 Branches in Canada, extending from the Atlantic to the Pacific

New York Agency: 63 and 65 Wall Street

Bankers in Great Britain: The London Joint Stock Bank, Limited; The Royal Bank of Scotland

37

in Canada. The representatives of the Allies bought not only all the grains for export, but handled also the grains for consumption by eastern mills. They secured all the cars during the winter months and all the boats during the summer months.

Needless to state, this situation was not acceptable to the grain trade either in this city or in Fort William, Toronto or Montreal. It is recognized that the exporting of grain from the Canadian seaboard to the allied countries is, in a commercial sense, impossible during the war, and that nothing can be done, so far as shipping grain from the seaboard to Great Britain is concerned, but it has never been admitted by the trade—and is not admitted to-day—that there was any real justification for a method of bandling our grain which results in long-established grain firms being thrown out of business altogether. The trade have always held that they could have put the wheat across the lakes and delivered it to the Wheat Export Company at eastern lake ports, or the seaboard, under such regulations as the government of Canada might approve, without sacrificing in any way efficiency or despatch in the handling of the vessels, or interfering in the slightest degree with the flow of wheat to the allied peoples. They have held, and they still hold, that the machinery for loading and forwarding the grain from the head of the lakes was a machinery created, not by the allied governments or their representatives, but by the grain trade at Winnipeg—a machinery which had been tested and found efficient years before the creation of the Wheat Export Company. They have held, and hold still, that it was only because the agent for the allied governments could utilize the machinery which the grain trade created that he could perform the service he did with efficiency. They have held, and still hold, that with the machinery which the grain trade created and the control of the Board of Grain Supervisors for Canada, the movement of wheat across the lakes could be performed with despatch and satisfaction to the allied governments without sacrificing Canadian firms that will be needed when the war ends. They have held, and they hold to-day, that within the Dominion of Canada the whole system of the marketing and handling of grain should be controlled by the government of Canada, and not by any commission, or board, or body created either by Great Britain or by Great Britain and her allies. The trade are prepared to accept any restrictions put upon them by the government of Canada, but they have had quite enough of restrictions imposed upon them from across the ocean.

The New Order-in-Council.

From time to time representatives of the grain trade of this city and other Canadian cities have appealed to the government of Canada to take control of the whole system of handling grain within the Dominion. As a result of very many interviews, the government passed an order-in-council under date of September 5th, 1918. In this new order-in-council the Dominion government takes over the control of the marketing and handling of the grain within the Dominion. It vests authority in the Board of Grain Supervisors in regard to grain consumed in Canada and grain exported to the Allies. It provides that the agent for the allied governments must negotiate with the board in regard to exported grain, and the board can specify the place at which the allied governments shall accept delivery, the prices and the terms, etc. It also increases the power of the Board of Grain Supervisors with regard to grain consumed in Canadian mills, and, in a word, through the Board of Grain Supervisors the government of Canada in this order-in-council takes control of the whole movement of grain.

This order-in-council is most acceptable to the grain trade of this city and, we believe, to the grain trade of the Dominion. True enough, it will not restore future trading in wheat; it will not permit profiteering; it will not permit of large earnings in the handling of the wheat crop, so far as the trade are concerned, but it does provide for Canadian control of the greatest Canadian product, and control through a body which is accessible to the trade, and which is responsible to the government of Canada. This is all the grain trade have asked for, and the grain trade are willing to accept the control of the Board of Grain Supervisors in regard to the handling of the grain. It is not a matter of profits with the trade—it is a matter of survival, in the first instance, and in the second, it is a matter of principle. The grain trade have been and are still, doing their share in regard to support of the government in its war efforts, but the grain trade do not believe that the methods of handling Canadian grain since the war broke out have been either in the interest of Canada or in the interest of that relationship which should exist between Canada and the Motherland. It is a matter of regret to us to hear that there is opposition to this order-in-council. We trust it will be maintained by the government, and that, while we do our best for the winning of the war, we shall maintain the principle of Canadian autonomy in Canadian commerce.

The Crop Prospects

We all regret the fact that our grain crop in western Canada has been damaged by the wind, the drought and the frost during this season. You have seen the estimate published by the North-West Grain Dealers' Association—an estimate of about 163,000,000 bushels of wheat for the prairie provinces. The producers prepared and seeded a greatly increased acreage. They did their part, and they did it at considerable expense. It is a great disappointment to us all that we have not thirty bushels to the acre on the increased acreage seeded. How much wheat this country will be able to export as wheat out of its total crop it is difficult to say, and it is difficult to say how much wheat Canada will ship between now and the close of navigation. If a programme was formed on an estimate of about 160,000,000 bushels, then, considering the needs of this country for seed for the next year, the need for bread and the difficulty of finding substitutes for wheat flour, it would not be safe administration on the part of our authorities to provide less than 80,000,000 bushels of wheat for total home consumption. This would leave 80,000,000 bushels for export in the form of either wheat or flour. Of this 80,000,000 bushels, a considerable quantity should be milled in Canada, both in the interest of our milling industry, and more particularly in the interest of feed for live stock. The result would be that the quantity of wheat available for export as wheat this year on an estimate of 160,000,000 bushels crop cannot be a large one. The total business in wheat will not be large, but apparently the export part of it will be less important than the domestic business, which affords an additional reason for securing the domestic business of Canada for Canadian firms

SPANISH RIVER PULP AND PAPER

The annual report of the Spanish River Pulp and Paper Mills, Limited, which is given in full in this issue, shows a decline in net profits as compared with 1917. This change is attributed to the fixed price set for newsprint by the Dominion government. The company has so far manufactured newsprint exclusively, and has, therefore, been affected to a greater degree than were the other companies who manufactured other lines as well. However, compared with the company's business several years ago, the year was quite successful. Interest was paid on the funded debt and other obligations, and, in addition, one-half million dollars was appropriated to wipe out the deficiency account. The balance carried forward is now over $1,000,000 as compared with less than $1,000,000 one year ago. Considerable improvements were made during the year. To carry this out the assistance of the banks was required, which accounts for the increase in current liabilities.

The costs of production of some of the Canadian pulp and paper companies, according to summaries made by the paper controller, Mr. R. A. Pringle, K.C., is as follows:—

John R. Booth's	$81.20
Domnaconna Paper Company	71.22
Spanish River	78.40
Laurentide	70.48
Rice Brothers	73.81
Abitibi Power and Paper Company	75.63
Belgo-Canadian	72.16

The costs of the Spanish River Company are, it will be seen, second in this list. The list does not, however, include the Brompton company nor the Fort Frances company. The costs of the latter are also high. In view of the increased price which has just been announced by the paper controller, the position of the company should be even better for the current year. The new price set is $60 per ton instead of $57. This new price is retroactive to July 1st, that is, the beginning of the Spanish River Company's financial year, and is to last to December 1st, when the price will again come up for consideration.

FARMERS AND PRICES

War Has Undoubtedly Been Favorable to Farmers—Rapid Price Changes are Dangerous

BY J. L. PAYNE.

The pinch of high prices, the restrictions on the consumption of certain staple foods and the growing anxiety with regard to the war have combined to focus public attention on the position of producers. The conviction is general in all the larger centres of population that prices are needlessly high, and that what is the consumer's burden in this regard is the farmer's gain. That is to say, the war has cast heavy obligations on one class in the community and given a substantial bonus to another class. Everybody falls within one class or the other, for we are all either producers or consumers of food. In this situation it is well to look at the facts calmly and without prejudice. There are two sides to the case.

The farmer has not escaped from the higher cost of living, as intensified by the war and founded in conditions which antedated the war. It costs him more to produce by precisely the larger amount he has to pay for what he buys. Justice demands that this higher cost of production shall be reflected in the price of what he has to sell. His labor, for example, costs him more than it did four years ago. He must also pay more for his machinery, his groceries, his clothing, his house furnishings, and so on. Beyond question he can make out a good case for better market prices for his beef, hogs, grain, butter, eggs and what else he produces. He carries on a business which demands hard work, long hours and some discomforts. His relationship to the whole scheme of urban life is so important, to say nothing about the successful prosecution of the war, that simple fair play demands he shall be met in a spirit of broad and encouraging liberality. He has not always been met in that spirit.

Relation of Costs and Selling Prices.

All this may be candidly admitted without disposing of the contention urged in many quarters that he is being paid excessive prices for his products. Let us try and get at the facts. In the first place, there is an obvious fallacy in arguing that because the farmer pays twice as much for his labor and machinery he should, therefore, get twice as much for what he produces. To begin with, he does not pay twice as much for either; but, assuming, for the sake of argument, that he does, where does that proposition land us? He does not buy a new set of farm equipment every year. His needs in that regard are spread over an average of about twenty years, and a liberal allowance would be $120 per annum. The higher cost in 1917, as compared with 1914, would certainly not exceed 60 per cent. all round. For example, a binder which now costs $205 was procurable at $135 in 1914. His extra labor is limited to, say, ninety days, and where he paid $1 50 per day five years ago, he now pays $3. As a matter of fact, authentic statistics show he pays less than $2, excluding board. The question is, To what extent does this extra outlay increase the cost of production? That is the fair way of looking at the matter.

Applying this basis of calculation to wheat, by way of illustration, it will be seen that if he raises one thousand bushels of the former, and nothing else, the additional cost for labor would be $135 and for machinery $120. That would be equal to exactly 13½ cents per bushel on account of labor and 12 cents per bushel on account of machinery, or 25½ cents for both. It is an extravagant allowance; yet his situation is by no means distressing, inasmuch as he now receives at least $1.20 more for his wheat than he did in 1914. The same argument applies to oats. In other words, the advance in market price compensates him for his additional cost of production and leaves him with a margin of 94½ cents per bushel of wheat to the good. If he raised 2,000 bushels of wheat his profit would be proportionately larger. Without going into the calculation as it applies to all other farm products let it be said at once that his betterment is in the same ratio. The consumer pays the whole of it.

There is another aspect of this matter which cannot be ignored. The impression is general that the demand for beef and pork has risen to such proportions that serious inroads have been made on the available supply. Hence, we hear it said that high market prices have unavoidably grown out of the operation of the inexorable law of supply and demand. There is absolutely no ground whatever for that view. Here are the facts from official sources with regard to the number of cattle, sheep and swine in the Dominion in 1915 as compared with the number at the end of 1917:—

	1915.	1917.
Milch cows	2,666,846	3,202,283
Other cattle	3,399,155	4,718,657
Sheep	2,038,662	2,369,358
Swine	3,111,900	3,619,382

It will be seen that the supply had made very material gains; and yet, in the face of what would seem to be a factor so vital and controlling, market prices have advanced enormously and beyond parallel. In the west farmers scarcely know what to do with their hogs. The supply appears to have passed beyond the immediate demand. Of course, it must be admitted that this situation applies to the Dominion as a whole. There have not been material increases in the supply in Ontario; but that only creates a problem in distribution, which is a vastly different thing than a problem in actual shortage in the face of urgent demand. To make matters worse, however, concurrently with this steady rise in the number of hogs in the country we have been importing heavily. In 1917 we brought in from the United States 94,173,110 pounds of pork, bacon, hams, etc. During that year we exported 225,603,971 pounds of the same products.

United States Supplies Increase.

Having alluded to our importations, it might be assumed that possibly, while we in Canada were adding to our herds, the United States supply had been diminished. Such a mistaken notion should be dispelled by the following figures issued by the Department of Agriculture at Washington:—

	1915.	1918.
Milch cows	21,262,000	23,284,000
Other cattle	37,065,000	43,546,000
Swine	64,618,000	71,374,000

There was a slight decline in the number of sheep. Thus we are thrown back on the conclusion that, whatever else may be said in defence of existing high prices for meats, the real cause is not to be found in a rate of consumption at the expense of available supply. We must find some other reason. That reason is in part psychological and in part commercial. People expect prices to go up during the progress of a huge war. On the other hand, the moment business conditions become abnormal prices take on special activity. Analyze the matter as you will, however, the two basic causes will be found to be (1) unchecked exploitation by middlemen, and (2) lack of resistance by the great body of unorganized consumers. At once the thought is suggested that a situation produced by such causes is remediable. It is remediable. It would, however, be a narrow view to assert that no other agencies are in operation. There are assuredly other factors, and at such a time they all operate in one direction—upward. But the interests of the primary producer, as well as the interests of the sorely-pressed consumer, demand that a sane and scientific plan should be evolved which would stay the ascent of prices and quickly restore them to a more or less normal basis.

Prices Should be Stabilized.

Is such a plan practicable? To answer in the negative would be to place unwarranted limitations on the powers of the people to unite in action for the common good. If prices are undefensibly high, they certainly could be brought within the jurisdiction of some regulating tribunal. As a last resort, looking at the same time to increased production, farms and farmers might be conscripted. While this would appear on the surface to be a drastic step, it would at once take on a different character when its basis were made the paying of generous prices to farmers. The entire Dominion could be plotted as a single farm, and the natural corollary be the contemporaneous mobilization of an adequate supply of labor. Novel as the idea may seem, and open as it would be to objection by many, we must all see that the assurance of a full supply of food for the Allies would be an ample justification. When we are conscripting the city man's son, it surely would be a small matter to conscript the farmer's hog and his wheat, especially as the country would pay him liberally for both.

We gain nothing by refusing to look a stern situation in the face. Farmers are making unusual profits out of the war. Consumers of farm products are bearing a corresponding burden. Each has the same responsibility to do his bit.

THE BROWN BROTHERS LIMITED

Simcoe and Pearl Streets - TORONTO

The interests of these two classes are mutual. It would be a grave mistake, therefore, to permit hard and uncharitable feelings to take root in the cities and towns of the country. They would survive the war. The way to a clear and amicable understanding is to get the facts of the case in hand and then come together for an adjustment of prices through some competent commission. The thing is practicable. The vast and vital interests at stake make action imperative.

The futility of high prices is obvious. They do not increase the supply by a single ounce. For the most part, they create unearned profits for a few and impose hardships on many. We should, however, be warned by the lessons of history. After the battle of Waterloo there was an immediate and tremendous reaction in market values, so that places were changed. Producers became the sufferers, because they could not get enough for their commodities to sustain life. Something similar happened at the close of the American civil war. Whenever business gets on an artificially inflated basis it is inevitable that the pendulum of prices will swing violently to the other extreme. It would be infinitely better to have the whole process of production and selling made answerable to reasonable regulation, and then there would be less disturbance and less suffering. Surely the awful trials of war will teach us sanity in respect of these things. We should promote the common welfare by taking preventive measures before curative measures are demanded; but so long as scarcity or hindrances to distribution are held to be valid reasons for exorbitant prices there is no hope.

BUYING VICTORY LOAN ON PARTIAL PAYMENTS

Greenshields and Company, of Montreal, in offering their facilities for the purchase of Victory Loan bonds by partial payments, say:—

The country has adjusted its views since the first loan of $50,000,000 was offered in the midst of much doubt in the autumn of 1915. A subscription of $500,000,000 can now be counted on with confidence. Wealth has poured into the country in the past four years as a result of high prices for agricultural products sold abroad and an immense volume of war orders. The large sum asked for this autumn is required not only to finance our part in the war, but to maintain our business activity at home. Neither point needs elaboration, for the situation of heavy war costs at home and abroad, and of the necessity of lending money to the government that Europe's purchases of grain and supplies may be financed in Canada, is well understood.

That there will be no stinting of effort to reach the objective of the government by raising $500,000,000 may be accepted as a matter of course. The patriotic motive in the temper of Canada to-day would assure the success of the loan. But more than patriotism can be advanced to support the argument. High commodity prices have reduced the purchasing power of the dollar until to-day it buys perhaps only a third—perhaps only a half—of what it would buy in normal times. Roughly, the dollar is worth little more than 50 cents, if comparison is made between its purchasing power a few years ago and now. The cycle will be completed in the years after the war, when commodity prices fall and the purchasing power of the dollar will rise. Therefore, every dollar saved to-day and invested in a Dominion of Canada bond, giving a high return and unquestioned security, is a dollar saved against the day when it will buy approximately double the amount of goods it can buy to-day.

We are prepared to offer as usual the facilities of our partial payment plan to readers of the Review who may wish to pay for their bonds out of current savings from month to month rather than from accumulated capital. A payment of $10 will start the purchase of a $100 bond; the balance can be paid off at the convenience of the client, with $5 a month the minimum. The plan also makes it possible for a person to purchase more of the bonds than he might be able to if he had to depend on having on hand the sums requisite to meeting payments on the regular instalment dates as named by the government.

Manitoba farmers are producing increasing quantities of butter, despite inducements to grow wheat, and the greater production of the latter. Up to date, the province has exported a hundred carloads, besides supplying home trade. In 1912, 55 carloads were imported into the province and none exported.

UNITED KINGDOM WAR FINANCE

Chancellor of Exchequer Explains Policy of Continuous Borrowing and its Advantages

The Right Hon. Andrew Bonar Law, chancellor of the exchequer, in the course of his speech at the Guildhall, on September 30th, on the occasion of the opening of the campaign for the second thousand million pounds in war bonds, said that of the two methods of raising money—namely, by periodical loans and continuous borrowings—the latter had been proved to be far the better, as it caused the smallest possible disturbance to the financial arrangements of the country, and was also an indication of staying power, on which the issue of the war depended. It was also far better from the point of view of post-war financial stability.

Mr. Bonar Law said that the wonderful amount of £1,200,000,000 sterling had hitherto been subscribed in war bonds. The new campaign aimed at a weekly subscription of twenty-five million sterling He predicted no difficulty in raising this amount, as the money was there. He mentioned that, before the last war loan, in January, the amount on deposit at joint stock banks was £1,400,000,000 sterling, but to-day it was somewhere near £1,750,000,000 sterling. It was to that source he looked mainly for the flow into the government exchequer.

The chancellor called on the people generally to subscribe to the war bonds, and declared there was nothing to be gained by waiting, as it was improbable that any great loan would be issued during the war, and there was no likelihood of the rate of interest increasing. He announced that the present war bonds campaign included the "feed-the-guns" movement, which he had inaugurated at Trafalgar Square on July 10, while the hitherto most successful means of stimulating rivalry between various cities would be continued.

Mr. Bonar Law added that at the end of the first half of the current fiscal year the war expenditure, for the first time under the "votes-of-credit" system, had been less by about £130,000,000 sterling than the budget estimate.

Right Hon. A. J. Balfour, who followed, said that, unless such a peace was secured as to prevent a recurrence of wars in future, our work would be only half accomplished. Before the League of Nations set to work there must be a clean slate to make a league of nations possible. Complete victory was absolutely necessary. He declared that President Wilson's speech of a few days ago had all the characteristics which made the president's public utterances unique in state documents. Mr. Balfour asserted, however, that Germany could not be allowed to enter a league of nations unless she had not been merely obliged to change her profession of faith, but was bereft of all her dreams of world-domination and tyranny.

The municipality of Burnaby has taken in about $15,000 in cash over the counter and under the hammer of the auctioneer, who is selling the tax lands of the municipality. Redeemed lands have also brought in a large amount of money, the total of which is not known at present.

GOVERNMENT INFLUENCE IN BANKING

United States Discusses Present and Future Banking Problems, and Relation of Government to Private Initiative

Chas. H. Sabin, president of the Guaranty Trust Company, in an address at the convention of the American Bankers' Association, a few days ago, stated that, with half the world on a paper basis, some international banking agreement will have to be worked out to stabilize exchanges, after the war, and expedite the free movement of trade.

Mr. Sabin also expressed the view that in this undertaking private initiative should be given the widest scope and government activities restricted to measures of support. He said, in part:—

"For the first time in the history of the United States we have the opportunity of becoming a factor in international trade and finance. Our weaknesses are many. A banking system concentrated under one head, properly organized to meet the demands of different localities with larger institutions ready to meet the competition of the large concentration of credit in Europe and Germany may prove necessary.

"We must adjust our minds not only to the expansion of our own banking interests abroad, but perhaps even to cooperation with foreign banks in some international banking plan which will meet the exigencies forced upon us by the war. With half of the world on a paper basis, it is certain that some international banking agreement must be worked out if we are to stabilize the world's tokens of exchange, and expedite the trade of nations.

"It seems important that private initiative and enterprise should be given the widest possible latitude in this field, in keeping with the public interest.

"It seems equally important to me that government activities be restricted to the support of such enterprise, rather than to supplanting it. For instance, the original proposition to organize a foreign exchange bank in connection with our Federal Reserve system seemed to be unnecessary, as our present banking system is providing for these needs with greater efficiency and less expense than would be possible through any government agency.

"No governmental financial institution should be projected into the field of competition with privately owned banks. The government's function here is that of providing a reservoir of credit for the assistance of the banks, and any innovation which would change that relation appears unwise and unjustified.

"If it could be proved that a foreign trade bank could be organized as a government agency free from such objections, which would act as a service institution in co-operation and not in competition with private banks, it might be worthy of consideration, providing special care is taken in working out its details in order to avoid conflicting interests which might retard the development of our foreign trade.

"It is certain that we shall need united effort to meet the competition we shall face, and in lieu of a branch-banking system and banking amalgamations, American banks must work together on a basis of common interest and in the general interest."

COBALT ORE SHIPMENTS

The following is a statement of shipments of ore, in pounds, from Cobalt Station for the week ended September 27th, 1918 —

Dominion Reduction, 108,000; Aladdin Cobalt, 76,000; Beaver, 65,318; Mining Corporation, 64,198; Coniagas, 65,846; Kerr Lake, 47,172; Nipissing Mining Company, 152,700; McKinley Darragh, 171,846. Total, 751,080.

The total shipments since January 1st now amount to 21,954,633 pounds, or 10,977.3 tons.

Calgary has been selected as the place for holding the 1919 convention of the Dominion Life Underwriters' Association. It is estimated that there will be 500 delegates at the convention, as there are over 1,500 members of this association in Canada.

MEXICAN INVESTMENTS

In their September letter the National City Bank, of New York, says:—

It is announced that Henry Ford intends to establish several plants for the manufacture of his tractor in Mexico. The plans for the first one call for the investment of $1,000,000, and Mr. Ford states that the profits from the Mexican business will not be taken out of Mexico, but invested for the development of business in that country. This will be good news there if the people understand the benefits which come from the development of stable industries. Mr. Ford does not personally need any income from the Mexican plants. They will be worth much to Mexico but nothing to him, in any material or economic sense. He will be gratified if they prosper and disappointed if they do not, but Mexico's stake in the enterprise is more tangible and vital. Of course, Mr. Ford's policy in investing surplus profits for the development of other or larger business is the common policy of business men. But for the profits of the automobile business there would be no Ford tractor plant in either Mexico or the United States.

It is pertinent in this connection to speculate upon what the progress of Mexico would have been in the last seven years, and especially in the last four years, if there had been no revolution, and order and protection to industry and investments had been maintained. The country is a storehouse of the raw materials needed in industry the world over, besides having large capacity for food production. It had in 1910 a population of 15,000,000 people, lacking the capital and industrial experience to utilize these resources, even for their own use. The people needed industrial organization, leadership, and to be supplied with equipment. Development was then under way, millions of foreign capital had been invested, and its investment had created employment for thousands of the Mexican people. Wherever this had occurred the condition of the people was rapidly improving. Wages were advancing, schools were multiplying, and the standards of living were rising. Nobody would say that social conditions were all that could be desired, but it meant much that they were improving.

The war would have given an enormous impetus to Mexico's development. There has been a world shortage of silver, copper, lead, oil, sugar and other products of the country, the output of which might have been greatly increased in a state of peace. The resources were there, the labor supply was there, and conditions were such that capital would have poured into the country from the United States as never before. There would have been work for every man and woman who could be induced to work, and at wages never before approached in Mexico. The country would have had an industrial experience revolutionizing in its influence. Not only would the newly imported capital have established permanent industries, but the profits of these industries would have been likewise invested, every dollar of capital creating new demands for labor. The buying power of the Mexican people would have been doubled, thus opening new opportunities in all the home industries and stimulating the energies and faculties of the pepole.

Unfortunately, Mexico during the last seven years has been in the throes of revolution. Destructive instead of constructive influences have had sway. No doubt real grievances existed under the old regime and many participated in the revolution from honest and patriotic motives, but the lesson of these seven years of disorder is none the less impressive.

UNITED KINGDOM BONDS SOLD

A big deal in bonds has just been put through at Montreal by officers of the Canadian Foresters, in which a block of $700,000 of United Kingdom bonds were sold to Messrs. Wood, Gundy and Company, Toronto. The order got the benefit of the exchange rate between Canada and the United States. The proceeds of this sale will be invested in the new issue of Canadian war bonds.

The inland revenue returns for the month of September show a net increase over the corresponding month last year of $1,853,894, the total receipts for the month being $4,194,322. Excise taxes brought in $2,694,904 and, war taxes $1,462,540

LEGALITY OF CONTRACTS

Case Where Legal Contract Becomes Legal—Legality of Original Contract is Important

BY M. L. HAYWARD, B.C.L.

A contract has been defined as "an agreement between parties legally competent to contract to do or not to do a certain *legal* act."

It follows that if I make a contract with Jones to sell him 100 shares of United States Steel Common, then the contract is good, as a sale of United States Steel is a "legal" act. If, on the other hand, I agree to sell him German government bonds, the contract is void, as the sale of German bonds in this country is "illegal" and forbidden by law.

There is quite a large number of contracts which are illegal, as laws are frequently passed forbidding certain transactions. These laws are generally aimed at stock transactions on margin or otherwise—and if a contract is thus rendered illegal it is, of course, unenforceable and not worth the "blind" typewriter it is written on.

It is, therefore, important to know whether a contract is valid and binding or unenforceable and worthless. Let us then briefly discuss a number of instances where these rules apply.

It follows that if I make a certain contract, with my broker for instance, and the law makes that contract illegal, it is, of course, void and unenforceable.

Subsequent Law Makes Existing Contract Invalid.

Suppose, however, and, it is a case liable to arise at any time, that the contract mentioned is legal when made and is not forbidden by any law in existence at the time, but before the contract is carried out a law is passed rendering it illegal. Where do the parties to the contract stand?

On this point the American law is well settled, and such a law invalidates all uncompleted contracts, and neither party has any right of action against the other.

A case along this line decided by the Maine courts is right in point. In this case a party named Brown made a contract with a collecting agency on certain terms whereby the agency were to collect accounts for Brown according to a plan by which the accounts after being sued were advertised for sale.

Then, while the above contract was in force, a law was passed in Maine which provided that no "person, firm or corporation, shall publicly advertise for sale in any manner whatever, or for any other purpose whatever, any list or lists of debts, dues, accounts, demands, notes or judgments, containing the names of any or all of the persons who owe the same," and after this law came in force, the agency sued Brown on the contract.

The Maine Court held that the agency could not recover on the ground that the contract had practically been cancelled by the coming into effect of the law forbidding the subject matter of the contract.

General Rule Laid Down by Courts.

The same principle has been laid down by the United States courts in the following words:—

"It is well established by the English courts and by the courts of this country, federal and state, that where performance of a contract or agreement, lawful in its inception, becomes unlawful by reason of any subsequent event, the contract or agreement is thereby dissolved or terminated, in so far as it remains executory, and both parties are excused from its further performance."

This rule has been followed by the English and Canadian courts, the United States' Supreme Court, and by the State Courts of Alabama, Colorado, Georgia, Illinois, Kentucky, Maine, Massachusetts, Michigan, Mississippi, Missouri, Nebraska, New York, Pennsylvania, South Carolina, Tennessee, Texas and Vermont.

Where Illegal Contract Becomes Legal.

But take this case. I make a certain contract which is forbidden by the law and, therefore, unenforceable—with my broker, for example. Before carrying out the contract the law is repealed, so that from the time of the passing of the new law the contract is a legal one. After the repeal of the law can either party hold the other?

This question was passed on by the California Supreme Court in a case where a customer employed a broker to buy stock on margin, and at the time of the contract the law of California forbade the sale of corporate stock on margin, so that the contract was invalid.

Then, after the contract was made, the California law was amended so as to permit margin contracts in certain cases, and the broker contended that this made the previous contract legal and enforceable, and the question was whether the broker could hold the customer on the contract.

Held to be Invalid.

The California Court held that he could not on the ground that "the established rule is that if a contract is void by the law in force at the time it is made, the subsequent repeal of the law will not validate such contract."

The same rule has been stated by a leading legal textbook as follows:—

"If an agreement was illegal by statute or on grounds of public policy when made, it is not rendered legal by the repeal of the statute or a subsequent change in public or legislative policy."

This is the law in England, Canada, the United States' Supreme Court, and in Alabama, California, Florida, Georgia, Kansas, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, New Hampshire, New York, North Carolina, Ohio, Oregon, South Carolina, Texas, Vermont and Wisconsin.

Legality of Original Contract is Decisive.

Again, take this third and last case.

I make a contract with a broker which is unenforceable, and the broker makes a claim against me for say $1,000 for services under the contract, which, of course, he cannot collect.

I agree, however, to pay him $700 by way of compromise and give him my note for that amount. Can the broker collect the note?

On this point the courts say no, on the ground that as the original contract was unenforceable, a compromise based on that contract is equally so.

This is the law in California, Georgia, Louisiana, Missouri, New Hampshire, North Carolina, Ohio, Pennsylvania, Tennessee, Texas, Washington, West Virginia and Wisconsin.

To sum up the matter the following rules may be said to be well established.

1. If the law forbids certain contracts then any contract made contrary to the law is void and unenforceable.
2. Any settlement of a claim arising out of such a contract is likewise void.
3. If the law is repealed after the contract is made the contract is still void.
4. If the contract is made before the invalidating law is passed the uncompleted contract is thereby rendered void.

BRITISH COLUMBIA'S FIRE LOSS

The annual report of the superintendent of insurance for British Columbia shows that during 1917 property valued at $1,541,000 was destroyed by fire. Of this amount, $887,630 was covered by insurance payable by 100 companies doing business in this province, of which 17 were under federal license. The net premiums collected by these companies during the same period amounted to $3,609,442.

The report shows by districts the number of fires and the fire losses. In thirty-five city municipalities were 422 of the fires, with losses of $756,427. Vancouver, with 181 fires, was responsible for a fire loss of $425,092. The district municipalities had 181 fires with a loss of $227,442, and in other districts there were 117 fires with $558,009.

The Union Casualty Company, of Winnipeg, has given up the agency for that city of the New Hampshire Insurance Company, of which Mr. H. H. Motley, of Calgary, is general manager for Canada. This step was occasioned by the fact that the Union Casualty Company has decided to become non-tariff.

MONTREAL MAKES PROFIT ON STEEL

The Montreal treasury was enriched recently to the extent of about $150,000 as a result of the sale of three thousand tons of reinforced steel, taken from the aqueduct work, where it had been lying for many months. The steel, consisting of hook bars and straight bars, varying in length from five and a half feet up to twenty-five feet, was bought by the city at $40 a ton, and was sold at an average of about $51 per ton, so that the city will make a profit of over $30,000, which they anticipated.

In addition to this, the city had reserved 141 tons of steel bars for themselves for conduit and bridge work, and this will cost the city nothing, as the figures given above are the totals after these deductions have been made.

The principal buyers were the Dominion Iron and Wrecking Company and J. E. Torshis and Company, the former taking fourteen of the lots and Torshis and Company seven, with A. G. Kidston and Company taking a portion of the first lot.

All the city commissioners were present at the sale, while the Hon. Al. Sevigny and about a score of buyers for steel firms were also present at the sale, which lasted for two hours.

FIRE PREVENTION CAMPAIGN

In view of the fact that the fire loss per capita of population in Canada has reached as high as $3 per annum, the Dominion Association of Fire Chiefs at their last annual meeting, held in Toronto, inaugurated a Fire Prevention Bureau to aid in the prevention of fires throughout the Dominion, and is asking for the hearty support of all Canadian citizens in the fire prevention campaign, commencing October 9th, to reduce Canada's tremendous fire loss. That they will receive the co-operation of the whole country in this worthy project is sincerely hoped, as it will be following up the motto of every good citizen at the present time to "Save and Serve."

SEPTEMBER MUNICIPAL BOND SALES

Victory Loan Activities Account for Low Volume of Sales Last Month

The municipal bond sales in Canada during September, 1918, totalled $761,600, compared with $3,158,307 in August and $440,268 in September a year ago. The September records of municipal bond sales at home for the past nine years are as follows:—

August.	Municipal bond sales in Canada.
1910	$2,841,486
1911	1,748,778
1912	3,998,605
1913	1,663,260
1914	535,050
1915	2,768,484
1916	960,435
1917	440,268
1918	761,600

War loans have the right-of-way in the money markets, and municipalities are consequently having considerable difficulty in marketing the bond issues.

Practically all bond dealers in Canada are now engaged in the preliminary work of the new Victory Loan campaign and are not in a position to solicit new business. There will be practically no more issues of municipals until the war loan campaign is completed.

The sale of Greater Winnipeg Water District bonds included in the September record, is the balance of a $1,000,000 issue authorized in August, apart from the $4,000,000 stock mentioned in our columns earlier in the year.

Details of September Sales.

The following are the details of the September sales:—

Municipality.	Rate %.	Term (years).	Amount.
Manitoba.			
Greater Winnipeg Water District	6	5	$609,100
Ontario.			
Kingston	6	20	8,500
Simcoe	6 & 6½	..	40,000
London	6	5	100,000
New Liskeard	6	10	4,000
			$152,500

The following table summarizes the above details:—

Province.	Municipal bond sales, September, 1918.
Manitoba	$ 609,100
Ontario	152,500
Total	$761,600

Past Record of Sales.

The following table shows the sales of municipal bonds in Canada only, during the past three years, and this year to date:—

	1915.	1916.	1917.	1918.
January	$ 1,784,047	$ 1,900,441	$ 1,060,256	$ 461,000
February	3,047,011	1,419,900	458,874	5,243,279
March	2,572,357	2,027,741	220,013	9,191,643
April	3,603,094	1,979,852	1,182,074	3,968,995
May	3,464,281	2,649,000	1,375,039	4,751,142
June	2,[illegible]95,744	3,043,283	1,642,003	10,108,6[illegible]
July	1,618,422	1,521,525	3,814,489	1,415,946
August	6,087,415	852,447	4,637,836	3,158,307
September	2,768,484	960,435	440,268	761,600

December	30,878,028	24,056,797	36,353,039	....

AUSTRALIA TO HAVE MORE TAXES

Higher Tariffs, Income Taxes, Postal Rates, Excise Duties are Features of New Budget

Hon. William Alexander Watt, federal treasurer, in the course of his budget statement on the 30th September, announced that new taxation would produce £5,356,000 sterling. The income tax would be increased 30 per cent., the land tax 20 per cent., postage one-half penny, customs duties would be increased on the following items: Ales and stouts by five shillings a gallon, tobacco by eightpence a pound.

The excise duties would be increased as follows: Beer, fivepence a gallon; spirits, seven shillings a gallon; tobacco, eightpence a pound.

It is expected that the additional customs and excise duties will yield £1,918,500, income tax £2,200,000, land tax £380,000, entertainments tax £275,000, postage £516,000.

Mr. Watt congratulated Australia on the generally healthy condition of its finance, production, trade and manufactures.

To the representatives in parliament Mr. Watt, in introducing the budget, said the receipts for the past year were £38,900,000; expenditure, £35,000,000; the war expenditure, £66,700,000; the total war expenditure to June 30, £184,600,000, of which £159,000,000 had been paid out of war loans. It is estimated that the war expenditure for the current year will reach £100,044,000, of which £52,300,000 will be paid out of war loans.

Mr. Watt added that the Federal war profits tax will remain in operation, but that a bill will be introduced to relieve new businesses. Persons refusing to contribute to the war loans will be liable to a penalty equal to twice the income tax. The penalty will not absolve the delinquent from contributing.

The government has passed a regulation prohibiting the use of the red flag except as a danger signal.

The congratulations of the Commonwealth have been cabled to General Allenby on his signal defeat of the Turco-German armies, as well as to General Chauvel, commanding the Australian troops in Palestine, on their participation in the victory, which aroused the greatest enthusiasm throughout Australia.

LIFE INSURANCE AND AGRICULTURE

An Address on the Relationship of Life Insurance to the Development of Agricultural Resources, Read Before the Life Underwriters' Convention in New York

BY MELVILLE CUMMING,
Secretary for Agriculture, Province of Nova Scotia, Canada; Principal of the College of Agriculture, Truro, Nova Scotia.

I recently read an article that appeared in the New York "Nation" on "The Better Advertising of Life Insurance," in which it was stated that life insurance was not advertised or did not receive attention to any appreciable extent in the public press. Insurance companies do advertise their names, the amount of their assets, etc., and the names of honorable men who fill their directorates, but the actual goods they sell, life insurance, are rarely if ever publicly advertised, this part of the business being left to the various agents who underwrite insurance, or to specific insurance publications.

I believe this statement is correct. At least, the speaker reads more than an average number of newspapers, magazines, and especially farm publications, and yet cannot recall an extended article on this subject in any of these periodicals. In fact, during the past two months, since I agreed to address this association, I have carefully watched for articles, and outside of your official publications have found practically none.

I did find a short article in an Ontario farm paper, entitled "Insurance as a Duty," written by a practical farmer and newspaper correspondent. The article, however, dealt with fire insurance. I quote three sentences: "To insure one's buildings against fire is a duty owing to oneself and to the community. No one has a right to expect or to receive from others that which he can provide for himself. It is selfishness—selfishness of the meanest kind—when one either looks for this or invites it by avoidable misfortune." Reflecting on these sentences, there came to my mind several instances of farmers' wives and children left alone on their farms owing to a husband's or a father' death, in such a helpless financial condition that they either had to dispose of part of their property at whatever it would bring at that time or accept the charity of relatives or neighbors. A comparatively small life insurance policy would have obviated that and left these dependants in an independent condition, so that they could either continue their farms as before or withhold the sale of property until such time as they could realize its worth. In these instances, at least, it was the duty of the farmers to have insured their lives.

But I have anticipated myself, having only intended to say that the subject of life insurance as a commodity, just as valuable as household supplies or a horse or an automobile, seems to receive very little attention in the popular press of the country, so that a layman, like myself, trying to get information, has to secure it either from a representative of a life insurance company or from some official publication, commenting on which one is bound to say that, as far as the farmers of the country are concerned, life insurance men in selling their commodity do not stand as well as do men who have what appear to be more tangible commodities to sell.

What thoughts I have gathered together on this subject will be centred around the following heads: (1) What life insurance companies have done and can do to assist the development of agriculture by loans advanced on farm real estate; (2) what life insurance companies may do to encourage the individual farmer to invest capital in the farm through providing him with a safe anchor to windward; (3) what life insurance companies can do to help constructive agriculture by supplementing the means by which farms may pass from one generation to another with all the accumulated improvements of each generation

(1) In the early days of agriculture farming was carried on with a maximum of labor and a minimum of capital. But in the latter half of the nineteenth century the invention of power machinery for sowing and cultivating and harvesting crops made it possible for individual men to own and operate farms larger and more effectively equipped than the erstwhile primitive farm To do this has required the investment of a much larger amount of capital, both to purchase the land and to procure and maintain the machinery and power necessary to operate the larger farm In some cases this increased capital has been the accumulated savings of years of hard work, but this is a long road toward achieving desirable results in comparison with the borrowing of capital for the purpose. Consequently, there has grown up, especially in the larger farming sections of the world, the practice of borrowing capital for farm operations, just as is the practice in other lines of industry. In the early history of this movement, the farm mortgage or loan was not popular from the point of view of lenders or investors. It usually meant a long-term loan and frequently, during the time when farm implements were imperfect and modern methods of agriculture not adopted, slow and none too sure repayments. The result was that farmers had difficulty in borrowing capital from business corporations and had to fall back on individual capitalists, who ofttimes, because of the character of farm loans, charged the highest possible rate of interest and used every means to compel prompt repayment, with the result of many a sad foreclosure.

Fortunately the governments of our country and the big business corporations, realizing the fundamental value to a nation's prosperity of agriculture and the permanency of this industry, have partly come to the rescue and, especially in the larger farming areas, loaned millions of dollars on farm real estate. In this important assistance to the development of agriculture and consequent food production the life insurance companies of Canada and the United States have already taken no small part.

I find in Bulletin No. 384 of the United States Department of Agriculture, dated July 31, 1916, that on December 31, 1915, American life insurance companies had invested $693,940,000 in farm mortgages, being 14.5 per cent. of their total invested funds. I also find that this was about 38 per cent. of all farm mortgage loans reported by the United States Census of 1910, and $100,000,000 more than the total amount of the farm mortgages credited to all banks and trust companies by the comptroller of the currency in 1914. I have not as accurate information for Canada; but I learn that at the end of 1917, the total invested funds of Canadian life companies amounted to $303,723,339, and the loans on mortgages to $92,703,647, or 30.52 per cent. of the total investments. Just how much of these mortgages was placed on farm real estate I cannot exactly ascertain, but the president of a Canadian company has written me to the effect that about 45 per cent. of the total mortgage investments have been so placed. According to this estimate, the total of farm mortgages held by Canadian companies is about $41,716,641, or 13.7 per cent. of the total invested funds.

Reverting again to American figures, I find on consulting the report transmitted to the life insurance companies of the United States by George T. Wight, secretary and manager of the Association of Life Insurance Presidents, on August 26 last, that 165 American companies, during 1915 and 1916, increased their farm mortgages in round figures from $655,000,000 to $845,000,000, an increase of $190,000,000. It is further stated that the increase for this two-year period for farm mortgage loans is 29 per cent., whereas the rate of increase of all assets of life companies for the same period is 12 per cent.

From the foregoing figures, it is evident that life insurance companies have already become a positive factor in the advancing of money for agricultural production and so have given very material assistance in the production of foodstuffs demanded by the conditions created by the world war.

In considering the large amount of money which Canadian and American life insurance companies have loaned for the development of agriculture one must remember that a large share of these amounts are the careful savings of thousands upon thousands of policyholders who, if a system of life insurance did not exist, would probably squander no inconsiderable part of the premiums which they now pay upon expenditures of a more or less trifling character and of little substantial value in the permanent development of the country.

Having briefly summarized the splendid contribution which life insurance companies have thus far made to farm loans, I feel it necessary to go back a little and to deal with some further considerations relating to the need for farm loans.

In former times there were many who thought—and there are many who still think—that the farmer could and should take care of himself. This thought is correct. There is no other form of employment that is so sure to provide the actual necessities of life for the people dependent upon it as farming. But when our farms are called upon not merely to support the actual farmers living on the land, but also to supply foodstuffs for the increasing proportion of the population living in our cities and to provide an exportable surplus as well,

E. B. McDERMID,
Managing Director

then farming becomes not merely a matter of self-support of the farmer himself but the actual maintenance of the prosperity, as well as of the sound development, of the whole country.

To bring this about requires, as I have already stated, a much larger investment of capital than in the former days; and if this capital cannot be as freely secured by the farmer as by the manufacturer or business man and at at least as low rates, farming and its consequent food production will never attain that development which is required if the financial stability of the country is to be maintained.

Now, what has so far been said is applicable not alone to farming but to other lines of industry as well. But, so far as repaying capital borrowed, farming differs from many other industries in that while a safe industry for investment it does not offer big profits; so that, in the main, farm loans must be long-term loans and should be available at the lowest possible rates. I know that all of you will not agree with me in this, but I am certain that every one who has an intimate acquaintance with farming will endorse my statement. True, there are occasional farmers, engaged in more or less specialized lines of farming, whose returns from farming are high. But, in the main, farming, while offering a sure source of livelihood, does not pay as large returns on the investment as are paid by many other lines of industry.

Bearing on this point, I purpose submitting some figures secured through careful farm surveys made in some of the more prosperous farming communities of Canada and the United States. These surveys were not made for the explicit purpose of getting at returns from average farms, but were rather made in prosperous farming communities for the purpose of bringing out facts that would be useful in putting farming on a better paying basis in some of the less prosperous communities.

The first of these surveys I have access to was made in Tompkins County, New York, in 1907. The financial returns are set forth in terms of "Labor Income," by which is meant the amount left after the farm has paid interest on the investment and all business expenses. This balance, called "Labor Income," pays for the farmer's management and labor. If he has inherited the property he will also have the interest to the good, but you will agree that, whether he has to pay interest money or whether he is in the fortunate position of being able to add this to his earnings, it is a fair charge against the farm.

The average labor income of 615 farmers in Tompkins County, whose farms were surveyed, was $423. About one-third made less than $200, about one-third made $200 to $400, and one-third made over $400. Or, one-third failed to make hired man's wages, one-third made wages and one-third made more than wages. The compiler of this survey states that the house rent and farm products used in the house in this region averaged about $300, so that these Tompkins County farmers averaged about as much as a $700 salary in the city. However, they saved more on this than they would in a city because they went without many things they would be tempted to buy in a city.

In a survey made last summer in Caledon Township, Ontario, one of the most prosperous townships in that province, the labor income varied from $507 on farms under 85 acres to $1,581 on farms averaging 200 acres, the general average being about $900.

The following are some of the net labor incomes set forth in the surveys reported: In Chester County, New York, $240 on farms up to 40 acres, and $1,575 on farms averaging about 250 acres, and an average in some other sections surveyed showed net labor incomes of $370, $550, $686, $853.

Similar unreported surveys have been made in many parts of Canada and United States, which indicate that the average net labor income of farmers on the American continent is between $300 and $400. Personally I have in mind communities where the so-called income is confined to the actual interest on the investment. And in one of the most prosperous communities in which I secured information the net labor income was rather less than $300.

Now, it should be stated that in practically every one of these surveys an odd farmer here and there was discovered whose labor income was as high as $10,000 or more; but, in general, a careful study of farm incomes on the American continent has shown that about one-third fail to make hired man's wages, one-third make wages and one-third make more than wages. It is for this reason—namely, the relatively small but none the less sure returns from farming—that it is necessary that a system of farm loans must be on a basis of the smallest possible interest charges and, in the main, long term repayments. I note, in reading reports of former meetings of your association, that this phase of the farm loan question has been carefully set forth and I also note that considerable discussion has arisen relative to farm loan systems instituted by governments for the explicit purpose of affording farmers the means of securing capital on the basis I have set forth.

In this connection it must be said that the rates of interest asked by insurance companies compare at least favorably with those of any other corporation and are in general but slightly higher than those asked under government loan systems. It is my own belief that, when the war is over and the necessity for the further development of agriculture leads to the providing of measures under which farmers may secure capital to the best advantage, it will be necessary for government representatives to join with the various loaning corporations, including life insurance companies, for the purpose of making it possible by their joint effort to provide farmers with ample loans on this basis.

There is another phase of this question which is not dealt with in any of the surveys which I have had a chance to study, but with which, none the less, we must take reckoning; I refer to the capital required by new settlers on the land, of whom there should be many thousands after the war is completed. The government with which I am connected has, through its immigration policy, loaned considerable sums of money to new settlers during the pre-war period. A careful study of the circumstances of these settlers has shown that, in the main, during the first three years it is extremely difficult for them to meet their interest obligations, let alone repay any part of the principal. I have received similar reports from those who have been identified with new settlement schemes in many parts of the globe.

It may be possible that to meet the case of these new farm settlers the government should make special provisions. None the less, real statesmanship on the part of all loan corporations, which are prepared to advance money in order to effect the settlement of new areas of land, requires that consideration must be given to this difficulty with which practically all new settlers are confronted.

It is not my intention further to discuss this matter, but simply to state that in a final adjustment of spheres of operation between government and private loan corporations this problem of providing the means for new settlement must receive attention by itself. If this is done, the building up of rural communities, which have so rapidly dwindled during the past quarter of a century, may be effected. If it is not, and present systems continue, there is every indication that rural depopulation, on the one hand, and urban increase of population, on the other, will continue until food production will be reduced to a minimum and the whole question have to be dealt with in a most drastic fashion.

(2) Life insurance companies may encourage farmers to invest capital in their farms through providing them with a safe anchor to windward.

One of the most striking points brought out in the surveys referred to in the foregoing is that, with few exceptions, the average labor income made by a farmer increases in proportion to the capital invested in his farm and in proportion to the arable acreage of his farm. For example, in the Tompkins County survey, the following figures were ascertained relative to labor income from farms of various capitalization:—

Capital.	Number of farms.	Average labor income.
$2,000 or less	36	$ 192
2,001 to $4,000	200	240
4,001 to 6,000	183	399
6,001 to 8,000	94	530
8,001 to 10,000	45	639
10,001 to 15,000	44	870
Over $15,000	13	1,164

The same principle is evidenced from a consideration of labor income in proportion to acreage of farm, it being shown that the labor income gradually increased from $168 on a farm of 30 acres or less, to $946 on farms of over 200 acres. Just to corroborate this I quote analogous figures made last summer in Caledon Township, Ontario, Canada:—

Acreage of farm.	Labor income.
Under 85	$ 507
86-100	801
101-150	1,091
151-241	1,581

The evidence to be adduced from all these facts is that, if farmers are to make incomes comparable with those made

by men in other pursuits of life, they must in general have a larger capitalization. The small farmer—setting aside the specialized truck farmer—invariably makes a small labor income. He and his successors are bound to be the hewers of wood and the drawers of water with whom farming will continue to be a drudgery and whose children will find more attractions in city employment than in the country. On the other hand, the farmer with a larger capitalization will become increasingly prosperous and will help to build up conditions that will make farm life attractive and encourage his children to stay on the farm and so build up our rural communities.

None the less, it is a slow business for the farmer of small capital to increase his capital, for his annual savings are small and accumulate slowly. The business procedure of borrowing capital for this purpose, as already stated, is just as much required on the farm as in the factory or business corporation. Still, the fact remains that there are many small farmers capable of handling a bigger business who hesitate to borrow the capital necessary, even if it were possible, because of fear that they cannot pay off their obligations in their uncertain lifetime and so may leave their families shouldered with an encumbrance which they might not be able to carry.

It is to men of this class that a life insurance policy should appeal. Such a policy would not only liquidate borrowed capital in the case of untimely death but would also help the farmer to obtain his loan on more favorable terms than would be the case if his only collateral asset was his farm property. This argument is applicable to all classes of farmers, but especially to those who are engaged in more or less exclusive grain or fruit raising, which lines of farming, though very profitable in some years, have their disastrous years. Every argument, practically, which is applicable to a city man along these lines is nearly as applicable to the farmer; and talking as I am to a group of life insurance men, I need not further elaborate these arguments.

(3) Life insurance companies can help constructive agriculture by supplementing the means by which farms may pass from one generation to another with all the accumulated improvements of each generation.

The most successful farmers—at least, of my own acquaintance—in the older settled parts of the country are those who have inherited their farms from their fathers. There is no break in the operations of such farms and whatever improvements have been made by the father are taken advantage of by the son and accumulate as each generation passes by. Not infrequently, however, it happens that a father dies, leaving a good farm but little ready cash to start the son in farming or to pay off such other members of the family as may have left the old homestead. This latter exigency has unfortunately led to the selling of the old homestead and the passing of it on to some other owner. Nothing, in my experience, has broken up rural communities and retarded their progress to a greater extent than this circumstance.

It is unnecessary for me to point out the value of a life insurance policy to meet just such a circumstance and so to facilitate the continued development of the homestead farm from generation to generation. Along this line, too, I might add considerable more, but realizing that my audience is more familiar with such conditions than I am, I do not consider it necessary to further elaborate this phase of the subject.

The question which has interested me most in getting up this paper is: To what extent do farmers insure in comparison with men of other pursuits? To get some light on this subject I addressed a letter to several insurance companies in Canada and asked for information from a number of life insurance agents. Some of these agents told me that they did a very small business among farmers, but that they believed there was a great field for operation among them. They pointed out that in the early days of life insurance farmers had not become familiar with any other kind of investment, outside of their own farms, than the savings bank. They distrusted corporation men of all classes, and sometimes rightly.

Of recent years, however, farming has been done more on a cash basis than in olden times and many farmers have sought outside investment for some of their surplus funds. In Canada, many farmers who were not known to have substantial accumulated savings, invested quite heavily in the recent Victory Loans; and in general farmers have become familiar through the press and other means of publicity, with the fact that there are many corporations, including life insurance companies, that are just as safe a repository for their funds as the savings bank or the erstwhile stocking or teapot or kitchen clock. Talking along these lines, one of the biggest insurance agents who formerly did business in Eastern Canada, but who is now situated in Western Canada, told the speaker that he believed that there was no better opportunity for the life insurance agents of the East than among the farming class.

One of the largest insurance companies in Canada advised me that out of its total business for the first seven months of 1918, it placed 14.2 per cent. of its life insurance with farmers. This did not include, so it is stated, all its "rural business," because it got a great deal of such business from men who are not actually engaged in agriculture, but who are indirectly dependent upon it for their existence. I am further advised, by the management of this company that, while there has not been any substantial increase in the tendency of farmers to insure, there has been a gradual increase due to the more or less systematic educational campaign which the agents of all companies have conducted among those engaged in the industry of agriculture.

The management of another Canadian company provided me with an analysis of their life insurance business for two months in 1918—namely, February and June. The total number of policies issued in these two months was 2,380, insuring $4,405,942, and of this, 748 policies, insuring $1,548,102, were issued on the lives of farmers—this farmer insurance being practically one-third of the business. I have not secured similar information from any American companies but, having started to investigate the subject, I shall be interested in learning whether the facts as set forth in the reports of the two companies in the foregoing are duplicated or possibly exceeded in the United States.

Finally, I wish to say that neither Canada nor the United States can afford to underestimate the importance of adopting every measure that will develop agriculture in the years succeeding the war. I have recently been reading the history of my own province, Nova Scotia, during the years immediately succeeding the Napoleonic war of a century ago. During the actual conduct of these wars, the province was in an extremely prosperous condition, brought about by the building of ships and the selling of all kinds of supplies at enhanced war prices; but immediately on the declaration of peace, a period of depression set in, which threatened the very existence of the country. It was at this stage that a gentleman writing under the pseudonym of "Agricola" issued a series of letters in which he set forth that the only salvation for the province at this period of depression was the development of its agriculture. Fortunately he was listened to; and one of the brightest periods in the agriculture of Eastern Canada occurred during those years succeeding the famous letters of "Agricola."

It may be different when this great war is concluded; but if we are to read the present in the light of the past, I can see in the facts of the history of my own province the need for concerted effort to develop the agriculture of Canada and the United States, when peace is declared, along bigger and more comprehensive lines than have ever been attempted in the past. In this effort every agency in our countries must join, and personally I have no doubt that the master minds of the life insurance companies of America will see to it that their companies do their full share.

FIRE LOSS COVERED BY INSURANCE, $16,000,000

The report of the superintendent of insurance on fire insurance companies, just issued, states that during the year 1917 the amount paid out for fire losses in Canada was $16,379,102, which is an increase over the amount paid in the previous year of $1,265,039. Cash received for premiums by the sixty nine fire insurance companies doing business in Canada amounted to $31,246,530, an increase of $3,462,678 over the previous year.

British companies paid out over eight million dollars, which was slightly over 51 per cent. of the losses. On the other eight millions paid out in losses, foreign companies had to pay $5,613,087, and the remainder was paid by Canadian companies. The gross amount of policies, new and renewed, taken during the year by fire companies was $4,049,050,000, which was greater by $630,821,319 than the amount taken in 1916.

Annual Meeting of Shareholders

OF THE

Spanish River Pulp and Paper Mills Limited

The Annual Meeting of the Shareholders of The Spanish River Pulp and Paper Mills, Limited, was held in Toronto on Thursday, the 26th day of September. The Capital Stock of the Company was well represented at the meeting. Mr. George H. Mead, President, was in the chair, and Mr. P. B. Wilson, Vice-President of the Company, acted as Secretary.

Mr. Mead submitted the Annual Statement and in moving its adoption remarked that it had not been the practice to make any further statements than those contained in the report itself. This year, however, he wished to refer to an announcement made in the Press that Mr. Pringle, the Paper Controller of Canada, had fixed a new price of $69.00 per ton for newsprint paper which was retroactive to July 1st, an advance of $12.00 per ton. The manufacturers would undoubtedly feel that the figure was lower than expected, but would bring some relief to those Companies suffering during the past year from entirely too low a figure. He further said that the United States Government has not as yet appointed a Controller, but an agreement was reached by the manufacturers last year whereby the Federal Trade Commission was asked to name a fair maximum price. The agreement provided that if the finding of the Federal Trade Commission was unsatisfactory to the manufacturers, it might be taken to a Court of Appeal of the State of New York. The price of $62.00 fixed by the Federal Trade Commission was manifestly too low to permit of the operation at any reasonable profit of most of the Canadian and American mills. The manufacturers, therefore, took the matter to the Court of Appeal and a decision was expected to be rendered before the end of current month. It was the expectation of all manufacturers that the price would be very much higher than the $69.00 fixed by Commissioner Pringle.

Answering the question of a shareholder, Mr. Mead explained that the labor situation was much more acute than a year ago, in consequence chiefly of the Military necessities of the country. Heretofore, the Company had on patriotic grounds determined not to claim exemption for any of its men but to fit its operations to the national demands

Replying to another shareholder Mr. Mead said he believed that the Company had completed the contemplated extensions or additions to the property. There would, however, inevitably with an industry of the magnitude of The Spanish Company be betterments and slight additions to be made from time to time. The amount expended in improvements included the extensions of the Groundwood Mill at Sturgeon Falls, the completion of the fourth digester at the Soo, and the extension of the electrical power at Espanola. The Company had always hitherto had an unbalanced plant. Groundwood supply being the basis of successful operation the Directors had always had in mind a programme ensuring a surplus of groundwood, and the Company now found itself for the first time in that position. The saleable products were now running 560 tons a day, showing a very substantial increase in the last two years. The mills now have a capacity of 600 tons a day.

Mr. Mackie, of Montreal, in moving a vote of thanks to the President and Members of the Board said in part: Mr. President, before adjourning, I would like to express my own personal view in regard to the situation, and to compliment yourself, as President, Mr. Wilson as Vice-President, and your Board of Directors on the progress the Company has made during the past two years. I do not refer particularly to this last year because it was not a specially fortunate year for your Company, but I refer to the able way in which this matter has been taken hold of, and while I am not qualified to pass judgment upon the additions you have made to the plant, I want to say that I have confidence in the ability of yourself and the men you have around you, and I feel those additions were well conceived, well planned, and will be a lasting benefit to the Company. I was pleased to hear you say that you thought this period of improvements and of spending money on equipment was over. The industry you have the honor to manage is one of our national industries, and it should have a fair chance to bring in some revenue to the country without undue interference on the part of the Government. If the national industry of our country is not protected we are going to be hard up for financing later on. In concluding I take this opportunity of wishing the Board the most successful year that the company has ever had.

Messrs. Price, Waterhouse and Company were appointed Auditors of the Company.

Further routine of business was transacted and the retiring Board of Directors were re-elected.

The Directors are:—

Geo. H. Mead, Dayton, Ohio.
P. B. Wilson, Sault Ste. Marie, Ont.
Chas. E. Read, Ottawa.
B. Tooke, Montreal.
W. E. Stavert, London, Eng.
T. Watson Sime, Toronto.
Major Thos. Gibson, D.S.O., Toronto (on active service).

At a subsequent meeting of the Board the following officers were elected:—

President: Geo. H.Mead.
Vice-President: P. B. Wilson.
Secretary: Major Thos. Gibson.
Comptroller: P. B. Wilson.
Treasurer: A. H. Chitty.
Acting Secretary: J. G. Gibson.

ST. JOHN TO ISSUE DEBENTURES

It has been decided by the council to issue $65,000 worth of debentures for a period of twenty years in connection with the East St. John, N.B., water extension.

TOWN OF PICTOU DEBENTURES

Sealed tenders will be received up till October 9th, for the purchase of the whole or any part of $19,500 town of Pictou debentures. These debentures are redeemable in thirty years from the date thereof, and will bear interest at the rate of five per cent. per annum, payable half yearly.

SASKATCHEWAN TO ISSUE BONDS

The province of Saskatchewan is issuing £650,000 debentures bearing interest at 5¾ per cent. at 90 to replace a nearly similar amount at 4½, maturing in January.

MONTREAL TRAMWAYS HAS DEFICIT

Necessity For More Revenue is Emphasized by Annual Report For Year 1918

Surplus account of the Montreal Tramways Company was drawn on to the extent of $303,991 to meet charges and other deductions, including three quarterly dividends, in the fiscal year ended June 30th, according to the financial statement submitted to the shareholders. That compares with credit balances of $77,473 a year ago, $111,422 two years ago and $124,900 three years ago, when in each case dividends for the full 12 months, instead of for nine months, were paid.

Beyond this little can be adduced in the way of comparisons with previous performances of the company, because of the changed form in which the figures are presented. The deficit of upwards of $300,000 testifies, however, to the need of the relief recently granted to the company through the provisions of the new contract with the city and the rate increases ordered to implement the terms of that contract.

The present statement shows gross earnings, under the old contract, from July 1st, 1917, to February 9th, 1918. In that period gross amounted to $4,652,747. From February 9th to June 30th earnings are credited with $874,048, representing the allowance for the period under the new contract and other earnings. This gave a total of $5,526,796, against which are a number of charges, in some cases covering the full year, but in others only the part period, either up to or after the new contract went in force, according to circumstances. These charges are tabulated as follows:—

Operating expenses, July 1st, 1917, to February 9th, 1918	$3,148,003
Taxes, July 1st, 1917, to February 9th, 1918	92,474
City percentage on earnings, July 1st, 1917, to February 9th, 1918	250,509
Interest on bonds and loans for the year	940,242
Interest on debenture stock for the year	800,000
Dividends paid to April 30th, 1918	254,637
Discount on bonds	223,112
Spent on renewals over amount carried forward from last year	106,808
Amount paid on account first Tramways Commission up to June 30th, 1918	15,000
Total	$5,830,787

These deductions being $303,991 in excess of the revenue for the year, surplus account was lowered from $856,449 a year ago to $552,457.

Some Comparisons.

Some superficial comparisons of the earning position in the past year and a year before are possible, although unsatisfactory at the best. Net earnings from operation for the period to February 9th, after deducting operating expenses, would be $1,504,744, to which is to be added the amount received for the balance of the year under the new contract—namely, $856,449, making a total net of $2,361,193. Deducting the $250,509 paid to the city under the old contract, the balance would be $2,110,684, against net earnings of $2,632,297 the previous year, after deduction of the city's percentage.

The balance available for taxes, interest, dividends, reserves, etc., was therefore approximately $522,000 less than in 1916-17.

One deduction for the year—namely, $223,112, discount on bonds, represents a readjustment of accounts, rather than so much new outgo. But, even with allowance for that, the outgo was in excess of revenue, and with a substantial amount of new construction for the year, the balance sheet naturally shows an impaired position. New construction is given as $1,946,677. As there was no new financing during the year, it is not surprising that the statement of working capital shows current liabilities at $2,929,035, an increase of $1,162,296, while current assets at $1,822,680 are only $20,403 higher.

With the new contract arranged and new fares going into force in a few days, it would be natural to expect that the deficiency of $1,106,355 shown in working capital account will be rectified by some permanent financing. A further issue of first mortgage bonds, for instance, could be made at a favorable time, against the additions to property account in the past few years. Comparisons of the balance sheets of the past two years follow:—

Assets.

	1918.	1917.
Cost of road	$39,052,874	$37,543,386
New construction	1,946,677	1,509,488
Accounts receivable	311,237	553,351
Stores	814,440	480,910

Surplus	552,457	856,449
Total	$43,098,820	$42,260,725

President's Report.

President Robert, after reviewing the statement of earnings and expenses, deals in detail with the terms of the contract between the city and the company as already published. Reference is also made to the recent increase in employees' wages and to the purchase of a block of land on Mount Royal Avenue, east of Fullum Street, for the erection of new car barns. He also states that the company during the year received a new contract for machining shells and that the work was proceeding satisfactorily. As to the recent action of the directors in suspending dividends, Mr. Robert says:—

"The board decided to defer the declaration of the regular quarterly dividend of 2½ per cent. on the common stock of the company, which would have been payable on August 1st last, owing to the fact that the new fares and allowances provided for under the contract had not as yet become operative, an appeal having been taken to the Quebec Public Utilities Commission."

The arrangements by which the Dominion government undertakes to supervise the purchase of the wheat crop will be followed by an agreement with the different dealers in Canada by which they will be allowed a portion of the purchases. In this way the dealers will do the buying and turn the wheat over for export to the British Import Company at the seaboard. The total amount for export at this time will be 35,000,000 bushels.

How much of your money do you think you can keep if Germany wins this war?

FIRE PREVENTION

Extracts from

PROCLAMATION

*Issued by His Honour
the Lieutenant-Governor of the Province
of Ontario.*

* * *

Whereas next to the care of those who are offering their lives on the front line of battle the conservation of all our energies and substance is our most important problem;

And whereas the saving of human life, thrift, and the prevention of loss of property through destruction by fire, is an aid which every one should give willingly to the community at large;

And whereas the reckless and impoverishing fire waste that confronts the people of our Province is appalling; * * *

Therefore, believing that the loss can be minimized only by awakening in the public mind a universal watchfulness against carelessness, accumulation of rubbish and unsanitary conditions; * * * and

Because of this great need and in order to arouse a sense of watchfulness, carefulness and cleanliness, and to create a greater personal responsibility in reducing the number of preventable fires;

We have thought fit, by and with the advice of our Executive Council for Our Province of Ontario, **to name, and do hereby name Wednesday, the**

9th DAY OF OCTOBER, 1918

AS

FIRE PREVENTION DAY

And we do hereby urge that on this day, throughout our Province of Ontario, attention be called in schools and public places to the conditions that exist and to the need of immediate action and co-operation on the part of everyone; and special exercises, addresses and other means be employed to impress on the public mind lessons of Fire Prevention.

* * *

To insure the success of this great Clean-up Campaign it will be necessary to have the hearty and harmonious co-operation of all * * * who have for their objects civic, social and industrial betterment. * * *

The proclamation should be read in all Schools and at Public Gatherings.

GEORGE F. LEWIS,
Deputy Fire Marshal.

Office of the Fire Marshal of Ontario,
Department of the Attorney-General.
Toronto, Sept. 21st, 1918.

DIVIDEND NOTICE

A dividend of one and one-quarter per cent. on the Ordinary Shares of the Company has been declared, payable on October 15th, 1918, to shareholders of record of September 30th, 1918.

By order of the Directors,
THOMAS GREEN,
Cashier.

New Glasgow, Nova Scotia, September 20th, 1918.

NOVA SCOTIA STEEL AND COAL COMPANY, LIMITED

DIVIDEND NOTICE

A dividend of two per cent. on the Preferred Shares of the Company for the quarter ending September 30th, 1918, has been declared, payable October 15th, 1918, to shareholders of record of September 30th, 1918.

By order of the Directors,
THOMAS GREEN,
Cashier.

New Glasgow, Nova Scotia, September 20th, 1918.

DIVIDEND NOTICES

LAKE OF THE WOODS MILLING COMPANY, LIMITED

Notice is hereby given that an extra Dividend of 2 per cent. on the Common Stock of **Lake of the Woods Milling Company, Limited,** for the year ended August 31st, 1918, has been declared payable on Monday, October 14th, to Shareholders of record at the close of business on Wednesday, October 9th, 1918.

By order of the Board.
R. NEILSON,
Assistant-Secretary.

Notice is hereby given that a Dividend of 3 per cent. on the Common Stock of **Lake of the Woods Milling Co., Ltd.,** for the three months ending November 30th, being 2½ per cent. from the earnings of **Lake of the Woods Milling Co., Ltd.,** and one-half of 1 per cent. from the earnings of the **Sunset Manufacturing Co.,** has been declared payable on Monday, December 2nd, 1918, to Shareholders of record at the close of business on Saturday, November 23rd, 1918.

By order of the Board.
R. NEILSON,
Assistant-Secretary.

Notice is hereby given that the regular Dividend of 1¾ per cent. on the Preferred Stock of **Lake of the Woods Milling Co., Ltd.,** has been declared payable on Monday, December 2nd, 1918, to Shareholders of record at the close of business on Saturday, November 23rd, 1918.

By order of the Board.
R. NEILSON,
Assistant-Secretary.

THE MERCHANTS BANK OF CANADA

QUARTERLY DIVIDEND

Notice is hereby given that a dividend of **Two and one-Half** per cent. for the current quarter, being at the rate of **Ten** per cent. per annum, upon the Paid-up Capital Stock of this Institution, has been declared, and will be payable at its Banking House in this city and at its Branches, on and after the 1st day of November next to Shareholders of record at the close of business on the 15th day of October.

By order of the Board.
D. C. MACAROW,
General Manager.

Montreal, 24th September, 1918.

STEEL COMPANY OF CANADA, LIMITED

ORDINARY DIVIDEND No. 7.

Notice is hereby given that a dividend of one and one-half per cent. on the issued and fully-paid Ordinary shares of the Company has been declared for the quarter ending September 30th, 1918.

PREFERENCE DIVIDEND No. 29.

Notice is also given that a dividend of one and three-quarters per cent. on the issued and fully paid Preference shares of the Company has been declared for the quarter ending September 30th, 1918.

The above dividends are payable November 1st, 1918, to shareholders of record at close of business, October 10th, 1918.

By order of the Board.
H. H. CHAMP,
Treasurer.

Hamilton, Ontario, September 27, 1918.

MARCUS LOEW'S THEATRES, LIMITED

Notice is hereby given that a dividend of 1¾ per cent. for the quarter ending 30th September, 1918, being at the rate of seven per cent. per annum, on the Preference and Common shares of Marcus Loew's Theatres, Limited, has been declared payable on 15th October, 1918, to shareholders of record on 30th September, 1918.

By order of the Board.
SAMUEL D. FOWLER,
Secretary.

Toronto, 30th September, 1918.

CONDENSED ADVERTISEMENTS

"Positions Wanted," 2c. per word; all other condensed advertisements, 4 c. per word. Minimum charge for any condensed advertisement, 50c. per insertion. All condensed advertisements must conform to usual style. Condensed advertisements, on account of the very low rates charged for them, are payable in advance; 50 per cent extra if charged.

WANTED.—Official for Accident Business.—A British Company of long standing, doing a composite business, is about to enter Canada and seeks the services of a gentleman competent to organize and superintend the Accident branch of the business. Applications in confidence, stating experience, qualifications and remuneration expected, to be made in writing to Box 203, *The Monetary Times*, Toronto.

REVELSTOKE MINING CLAIMS PURCHASED

A Calgary syndicate has arranged the purchase if important mining claims in Revelstoke, B.C. The claims contain silver-lead ore of a good grade, with a small amount of zinc. The amount of money involved runs, it is said, into six figures.

The Calgary company is known as Silver Creek Mines, Limited. Mr. J. Brassith, of Calgary, is the president of the company; Mr. D. Woolsey is vice-president and managing director; H. C. B. Forsyth, a Calgary barrister, is secretary, and J. B. Watson, C.A., of Calgary, is the treasurer. The company will shortly open an office at Revelstoke and the operations will be directed from here.

The population of British Columbia is now estimated at 400,000 in spite of the fact that more than 50,000 have gone overseas since the war commenced. The immigration into the province since August, 1914, has been at least 70,000. The authority for these figures is Wrigley's Directory, which has just been issued—a complete directory of the province of British Columbia.

SEPTEMBER FIRE LOSSES

Large Decrease For Month—Total Drops Below Million Dollar Mark

The Monetary Times' estimate of Canada's fire loss during September, 1918, is $917,286, compared with the August loss of $3,110,445 and $1,301,700 for September, 1917. The following is the estimate of the August losses:—

Fires exceeding $10,000	$752,000
Small fires reported	46,075
Estimate for unreported fires	119,211
Total	$917,286

The Monetary Times' record of the past three years and this year to date, shows the following monthly losses:—

	1915.	1916.	1917.	1918.
January	$ 1,249,886	$ 1,649,217	$ 1,918,660	$ 2,688,556
February	1,019,556	3,275,600	2,009,953	2,243,762
March	1,632,696	1,406,501	2,050,650	1,682,286
April	1,463,747	1,460,437	1,317,714	3,240,187
May	881,855	1,850,205	1,163,110	3,570,014
June	1,157,156	494,557	1,184,627	3,080,982
July	773,269	3,039,634	1,101,734	3,369,684
August	403,693	1,057,109	1,230,183	3,110,445
September	1,116,109	981,703	1,301,700	917,286
October	1,290,325	1,077,815	704,605	....
November	1,087,980	923,235	959,049	....
December	1,505,255	3,271,406	5,144,100	....
Totals	$13,671,527	$20,487,509	$20,086,085	$23,903,202

The fires reported in August at which the losses amounted to $10,000 and over were:—

Toronto, Ont., September 1, Yonge Street Arcade, $20,000.

Yarmouth, Ont., September 4, buildings of the St. Thomas Pure Milk Company, $50,000.

Iroquois Falls, Ont., September 10, Iroquois Falls Hotel, $20,000.

Mikado, Sask., September 8, store and dwelling of S. S. Meloff, $35,000.

Trail, B.C., September 7, plant of the Consolidated Mining & Smelting Company, $45,000.

Montreal, Que., September 12, building of T. P. Oakes, $62,000.

Mawer, Sask., September 19, business section of town, $95,000.

Montreal, Que., September 19, premises of W. H. Dwyer & Company, Limited, $15,000.

Trail, B.C., September 13, the Dwight & Lloyd roaster building, $20,000.

Victoria Harbor, Ont., September 10, business section of the town, $60,000.

Toronto, Ont., September 28, plant of the Canadian Wood Products, Limited, $35,000.

Montreal West, Que., September 27, cattle barn of the Elmhurst Dairy, $30,000.

Winnipeg, Man., September 30, building of the C. S. Judson Company, $250,000.

Belleville, Ont., September 29, farm buildings of Harry Foster, $15,000.

Destroyed or Damaged.

Among the structures damaged or destroyed last month were:—Blacksmith's shop, 1; tenement, 1; club house, 1; granary, 1; barns, 6; lumber yard, 1; business sections, 3; business buildings, 8; garages, 2; hotels, 2; plants, 4; store, 1; dockyard, 1; elevator, 1; pumping house, 1; boiler house, 1; grain separator, 1; vacant house, 1; cooperage, 1.

Among the causes reported last month were: Overheated tire vulcanizing, 1; dropping of lighted match, 1; short circuit, 1; defective wiring, 1; burning out of generator, 1; spontaneous combustion, 1; spark from thrashing machine, 1; explosion of oil stove, 1; spark from corn cutter engine, 1; lightning, 1.

Increase in Fatalities.

The following is a list of fires at which fatalities occurred last month:—

Chapleau, Ont., September 6.	Playing with oil stove	1
Mikado, Sask., September 8.	Trapped in burning house	4
Iroquois Falls, Ont., September 10	Trapped in burning hotel.	5
Montreal, Que., September 17.	Trapped in burning building	1
Toronto, Ont., September 17.	Trapped in burning aeroplane	1
Kingston, Ont., September 25.	Playing with matches	1
Total		13

The following table, compiled by *The Monetary Times*, shows deaths caused by fire during September, 1918, as compared with previous returns:—

	1911.	1912.	1913.	1914.	1915.	1916.	1917.	1918.

AMUSEMENT TAX IN ONTARIO

The amusement tax levied by the province of Ontario will be increased, according to an announcement made on the 3rd instant by the Hon. T. W. McGarry, provincial treasurer. The increase will not apply to theatre tickets costing 45 cents or less. The tax will still be one cent on tickets costing 5, 10 and 15 cents and two cents on tickets costing from 15 cents to 45 cents. On admissions costing more than this the tax ranges from 5 cents to 25 cents.

"SOLID AS THE CONTINENT"

HEAD OFFICE - TORONTO, CANADA

"I Wish I Had Taken Twice As Much!"

Nothing is more often repeated in letters received at our office than the expression "I wish I had taken twice as much insurance while I was about it." When endowments, dividends or cash settlements are paid, the assured very often acknowledges the remittance with that remark The truth is very few men take as much Life Insurance as they can reasonably carry—and repentance often comes when additional Insurance is not procurable. Probably every reader of this paper believes in Life Insurance and carries more or less of it but one should ask himself the question, **Am I Carrying as Much Insurance as I Can Afford?** If the policyholders who are now entering the Company could read the evidence of gratified policyholders and beneficiaries, they would make a great effort to increase the amount applied for—and existing policy holders would double the amount of their protection "One word more":— What income would your present insurance yield the beneficiary at say 6%?

The Mutual Life Assurance Co. of Canada

Waterloo Ontario

On Their Merits Alone

There must be some good reason why so many hard-headed business men, when requiring insurance for business purposes, apply to The Great-West Life. "Sentiment" has nothing to do with the choice—The Great-West Policies are chosen on their merits alone.

Low rates and remarkably high profit returns are the reasons.

Information on request.

GRAND TRUNK SHOULD NOT BE BOUGHT

Lord Shaughnessy Says Road Ought to be Left in Private Hands—Impressions in the West

"For the government to take over the Grand Trunk Railway would be an act of stupendous folly," said Lord Shaughnessy, back recently from a trip west, which embraced some 8,000 miles, including a visit to Edmonton.

"This is a democratic country," continued his lordship, "and if the people say they want to own a railway they must get it. Whether that is wise or not is not the question, as far as the democracy is concerned; but I simply remark that in taking any steps toward the nationalization of the railways of this country, the greatest caution should be observed, considering the great interests that are at stake and the economic and financial fabric which might be thereby endangered. Now the government has gone a certain length in the process of nationalization, and it may feel, under the pressure of circumstances, that it may have to go further. It may feel that it must take over the Grand Trunk Pacific; but to take over the Grand Trunk would, in my opinion, be an act of stupendous folly.

Occupies Vital Position.

"The Grand Trunk is a great international system, rendering important service—rendering reciprocal service, with its feeders, as between the eastern and western states, and occupying a vital position in the transportation interests of the country. In other words, the Grand Trunk is a great transportation entity, rendering service which is indispensable. The Grand Trunk Pacific was undertaken by a certain management, which, in a measure, had the project forced upon it by a government then in power, which was more incompetent than the management of the road that consented to it.

"But, of course, if the people express a desire for a particular policy, railway or other, the will of the people must prevail, but one may express the hope that in the working out of this nationalizing policy—if that be what the government is committed to—that regard will be had to the vital interests at stake, and that caution shall wait upon the actions to be taken in the premises."

His lordship saw evidences of prosperity on every hand. The big boom was over in the west.

"And very fortunately," said his lordship, "the people are confident and hopeful. I saw progress at every turn—sane and reasonable and confident progress. A large crop was expected, and there was some disappointment; but later reports are better in respect of bulk and quality; and, in any case, nobody is cast down. In fact, all are looking forward to the next season."

Called Money Wasted.

In British Columbia there was great activity in shipbuilding and lumbering; but there was one thing which Lord Shaughnessy did not like, and that was the waste of money, as he called it, in building a railway between Nitinat and Sooke, on Vancouver Island. His lordship did not care to appear in the guise of captious critic, but the money, in his opinion, was absolutely wasted on such a project. His lordship drew, with his finger, the direction and extent of the railway, which could serve no practical purpose. That money should have been conserved at a time like the present, when all that could be saved was needed for the absorbing purposes of the war. As for the general life of the province, everything was prosperous, but, of course, after the war the people must find other means of enterprise, as, doubtless, would be the case.

Being asked if he still held that the war would be over in a year, the answer was that he was simply an observer, and did not pretend to dogmatize; but from what he could glimpse of the situation, he believed that the war would be over before long.

"The Germans, Austrians, Turks and Bulgars must have it bitten into their consciousness that they are defeated—at least, that they are on the way to defeat. They have seen the superiority of the Allies, they have seen that the United States is sending millions of men to France; that the Allies are acquiring a decisive numerical superiority over the enemy, and, before long, the moment must arrive when they will confess defeat or suffer annihilation. That is my view; but I do not say it has any more value than the opinion of the average individual.

"After the war, do you think we will suffer from unemployment and slumpage of prices?"

"There may be a brief interlude during the reconstruction period, when there will be a certain slackness, but that will not be for long; and our manufacturers and others, who have been unable during the war-time to supply the things they would have supplied in peace time, will revert to their work and the products which it was their business to fabricate before the war. There need not be any misgiving on that score, I think. The Allies are winning victories, the Central Powers are apologizing to their own people for the situation which now presents itself, and I think we may all look forward to a not distant date when we shall gain what we are fighting for—a free and independent and happy world, to replace that which Germany has done her best to destroy, with all the fair and gracious things that made that world desirable.

"And then there will be readjustment, and our people will find themselves busy doing the things they did, largely before the war—and doing them with comfort and profit and contentment."

Lord Shaughnessy and party travelled nearly 8,000 miles. So well was the schedule observed that the special train returned to Montreal exactly as scheduled.

PULP AND PAPER INDUSTRY

Official Census Reveals Size of Industry in Canada—Eighty Per Cent. in Ontario and Quebec

The Dominion Bureau of Statistics has just completed a census for 1917 of the pulp and paper industry throughout Canada, and the figures are particularly timely in view of the current discussion on the paper situation.

Altogether, the census embraced 80 concerns, of which 31 were in the manufacture of pulp only, 26 in the manufacture of paper only, and 23 manufacturing both pulp and paper.

The total capital invested in this industry, including land, buildings, machinery, stocks on hand and "working" capital, amounted to $186,374,905.

The total number of employees on wages was 20,685 males and 671 females; on salaries, 1,345 males and 218 females. The total salary and wages bill was $20,344,286.

The aggregate value of production in 1917 was $96,248,824. The census covered altogether thirty-six products, of which the more important are as follows:—

		Quantity. Tons.
Pulp.		
Mechanical or ground wood pulp		921,081
Sulphate pulp		161,303
Sulphite pulp		374,894
Soda		4,136
Other		63,467
Paper.	Tons.	
Newsprint	689,847	$38,868,084

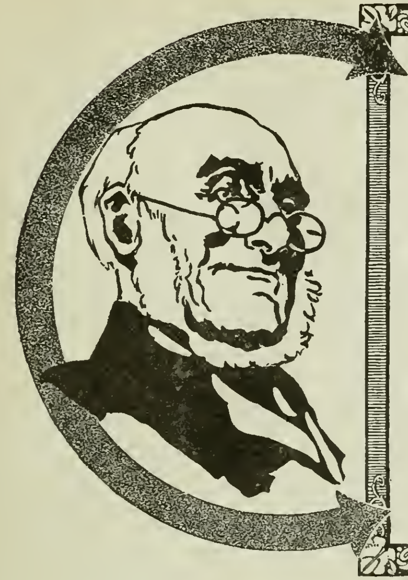
Ontario	33
Quebec	31
New Brunswick	5
Nova Scotia	5

Germany has demanded six billion roubles from Russia. If we save now for Canada, we won't have to save for Germany later.



When You are Old

Who'll provide the money to keep you? Will you then be compelled to keep on working the same as some old men you know? Or will you be able to enjoy an old age of comfort and independence?

A moderate annual saving now—when you can spare the money—invested in an Imperial Endowment Policy will secure you a regular income in your old age; or it will provide for your family should death call you early.

The Toronto bank clearings for the current week are $66,541,056 compared with $63,589,986 for the same week in 1917, and $54,911,451 in 1916.

NEW INCORPORATIONS

The Universal Cartridge Company With Capital of $2,000,000, Received Charter

The largest company incorporated during the past week was the Universal Cartridge Company, Limited, with a capital stock of $2,000,000, and head office in Toronto.

The following is a partial list of charters granted during the past week in Canada. The head office of the company is situated in the town or city mentioned at the beginning of each paragraph. The amount noted is the authorized capital, and the persons named are the provisional directors:—

Prince George, B.C.—Harper Gross, Limited, $10,000.

Trenton, Ont.—Pan American Film Company, Limited, $40,000; M. MacDonald, E. Smily.

Ascot Corner, Que.—Ascot Tile and Brick Company, Limited, $75,000; E. L. Darche, J. Darche.

Haileybury, Ont.—Stevens Catering Company, Limited, $40,000; F. A. Day, W. A. Gordon, E. M. Reilly.

Guelph, Ont.—Jackson Signal Company, Limited, $40,000; G. P. Jackson, W. F. Buckingham, M. Nairn.

Dryden, Ont.—Dryden Pulp and Paper Company, Limited, $1,000,000; D. W. Lang, H. Stanley, W. C. Woods.

Quebec, Que.—Quebec Elevator and Milling, Limited, $190,000; M. M. A. Gravel, E. Lefebvre, C. Edmond.

Vancouver, B.C.—Vancouver Waterfront, Limited, $100,000. Interior Fisheries, Limited, $100,000. Ashcroft Irrigated Lands, Limited, $50,000. Paul Klopstock Company, Limited, $25,000. Palmer Securities, Limited, $350,000.

Montreal, Que.—General Transfer, Incorporated, $20,000; G. Guerinm, A. Beaulois, J. W. Lavoi. Canadian Graphaphone Company, Limited, $75,000; W. Despacas, A. Cinq-Mars, G. Vezina. Transactions, Limited, $20,000; L. Morin, M. M. H. St.-Amant.

Winnipeg, Man.—Standard Remedies, Limited, $150,000; D. J. McKinnon, R. A. Creighton, R. MacDonald. Tobias, Limited, $5,000; E. M. Tobias, A. W. Bowen. Ericksdale Farmers' Elevator Company, Limited, $15,000; A. N. Shinbane, L. D. Morosnick. Consolidated Purchasing Company, Limited, $100,000; A. McDonald, J. C. McDonald, E. Nicholson.

Toronto, Ont.—Marvel Drug Company, Limited, $20,000; W. Cooper, W. A. Dietrich, H. D. Hall. Hargraft and Sons, Limited, $50,000; J. R. Hargraft, G. G. Hargraft, A. R. Hargraft. United Cheese, Limited, $1,000,000; A. W. Hunter, C. H. Kemp, G. R. Sproat. Wright and Oakley, Limited, $40.000; J. A. Campbell, J. H. Greenberg, M. O'Brien. Castle Oil and Gas Company, Limited, $1,500,000; M. L. Gordon, A. R. Brown, H. L. Neville Todhunter Mitchell Coffee Company, Limited, $100,000; T. B. Greening W. S. Greening, G. H. Campbell. Universal Cartridge Company, Limited, $2,000,000; J. Ross, J. B. Tudhope, W. H. Tudhope.

Farmers should save out of regard for what is being done in Flanders fields.

London and New York as Financial Centres

London's Position Rests upon a Sure Foundation—Influence of Its Geographical Situation—Custom Is Hard to Break—Characteristics of English and American Finance—Foreign Investments Maintained, in Spite of Heavy Cost of War

By W. W. SWANSON

LONDON and New York will be the indisputable financial centres of the world at the close of hostilities. The heavy indemnities to be imposed upon Germany will cripple that nation's financial power; and its loss of neutral markets and the diminution in its merchant marine will give the Anglo-Saxon world a big start in the race for commercial success. It is important, in this connection, that co-operation rather than competition should characterize the activities of the business world in the United Kingdom and the United States. Too much attention should not be paid to the predictions, made now and again in the American press, of the United States securing and maintaining a monopoly position in commerce and trade after the war. Sane and sober American opinion realizes full well that monopoly in business is as odious as tyranny in politics. The great Republic is not devoting its enormous resources to the annihilation of autocracy to replace it with something equally as bad in the sphere of commerce.

It may be said with assurance that British and American business interests will combine for mutual benefit in the post-bellum period. Keeping in mind that Great Britain has advanced somewhat more than $8,000,000,000 to the Dominions and her continental Allies, and that the United States has come forward with approximately equal support to the common cause, it will be clear that these two great democratic nations have strong material, as well as moral interests, in working in harmony to maintain the peace of the world, and conditions of economic stability. It is plain that the investing of such colossal sums on the European continent, in Canada, India, Australasia and elsewhere is tantamount to giving hostages to fortune. On material grounds alone the Anglo-Saxon world cannot, for a generation to come, face possibilities of war without the utmost concern. Too much is at stake.

It is not generally realized, at least not in sharp detail, how conspicuous has been British success in financing the present struggle and in maintaining British credit unimpaired throughout the entire world. At the outbreak of hostilities it was estimated by Sir George Paish that England held foreign investments, including those placed in the colonies and the Dominions, of not less than $26,000,000,000. That huge total of overseas credit has not been reduced by a penny. True, the United States has practically discharged its obligations to Great Britain, great as these were in August, 1914. It has been conservatively estimated that the Republic owed British investors at that time approximately $4,500,000,000, all of which has been discharged, either through governments borrowing in the New York market or in the placing of munitions orders. In Canada, British capital had been invested to not less than $2,300,000,000; but through supplying Great Britain with foodstuffs, munitions and manufactures, no doubt this huge English investment in the Dominion has been reduced. On the other hand, by as much as British credit in Canada and the United States has been lessened, it has in equal measure been increased in Europe. This is a fact of such striking significance that it will prove fundamental in rehabilitating British post-war trade.

It has long been recognized that foreign investments are the most effective method of building export business. Not only so, but capital investments abroad provide return cargoes to the country exporting capital. It is in this latter particular that the British mercantile marine has made most substantial progress. The enormous volume of goods flowing to the Motherland year by year has represented, in considerable measure, payment in the form of commodities of the interest upon capital investments. The United Kingdom has been somewhat slow, however, in taking advantage of exporting capital in the form of material goods. Plans have been already completed to remedy this defect immediately upon the close of the war.

It is absurd to suppose, as has been asserted in the enemy, and occasionally in the neutral and American, press, that the position of London as the financial centre of the world will be weakened after the signing of peace. Not only has England succeeded in maintaining unimpaired its capital investments abroad, but it has shown wonderful resiliency in tapping new sources of capital at home. The power of Great Britain, in the opinion of eminent authorities—including Sir George Paish—to finance its own requirements, as well as to continue to supply the needs of pioneer and developing nations, will remain undiminished in the days of peace to come. British business interests, however, are determined, as has not been done in the past, to take full advantage in the sphere of industry of that great lending power.

Before the war Germany had advanced to the position of the second richest nation in Europe; and had become the second strongest investing nation in the world. German banking and finance was more highly centralized and more carefully organized, however, than that of the United Kingdom. For example, the General Electric Industrial Union of Germany, the combine known in the Fatherland as the "Allgemeineelektricitaetsgesellschaft" made remarkable progress in the export business by linking up German finance with its industrial activities. A powerful group of German banks pledged themselves to find the capital to finance municipal and other enterprises in South America, India and elsewhere, provided the equipment and plant essential for the undertakings were bought in Germany. By following out this programme, the German electrical combine secured a practical monopoly in the export field in their particular output. This practice became so general and met with such astonishing success that German finance and industry marched abreast in capturing the neutral markets of the world. As has already been said, Great Britain intends to pursue similar methods. Before the war British capital was exported abroad at the annual rate of $1,000,000,000; but it was placed without general regard to its relation to British industry. Hereafter London will finance foreign enterprises of every description as before the war; but the great British banks, under the new scheme of agreement, will do so only if the industries of the United Kingdom are given preferential or equal treatment with those of their rivals. The same project has been carefully studied and plans completed to put it into effect in the United States.

War Finance on Enormous Scale.

To those who are apprehensive concerning the ability of London to maintain its position as the leading centre of world finance after the war, a glance at the figures of taxation, expenditures and income of the United Kingdom since the outbreak of hostilities will prove reassuring. Before the war Great Britain raised by taxation approximately $1,000,000,000; last year the nation raised $3,270,000,000. As the war cost the United Kingdom $9,305,000,000 for the last fiscal year, it will be seen that about one-third of the nation's military requirements was met by taxation. The last loan floated in 1918 realized $5,000,000,000—a staggering sum when it is realized that already, on war account alone, 39,900,000,000 have been expended; and that the United States will shortly be compelled to make a supreme effort to raise $6,000,000,000. Although Germany has a population half as great again as that of Great Britain, the number of subscribers to its last war loan was 5,289,000 as compared with 5,279,000 for the United Kingdom—and that, although one shilling loans were accepted in the Fatherland and nothing less than fifteen shillings in Britain. These facts may appear commonplace enough; but we believe, when carefully estimated, will give full assurance to our confidence in Great Britain's ability not only to meet the financial requirements imposed upon the nation by war, but to measure up to any test that may be placed upon it in the reconstruction period.

We are convinced that London will not only have no real competitor in Europe as a financial centre, but that it will for many years to come hold a relatively more important place in world finance than New York. For centuries London has been the clearing house of the world; and established habits cannot be changed suddenly, even under the shock of a great world conflagration. Great Britain has maintained its immense foreign trade practically unimpaired; and has not lost contact with even the neutral markets—aside from the enemy nations—during the course of the struggle. True, enormous losses have been inflicted upon its merchant marine; but its building programme is being accelerated at a rapid rate. One-half has not been told of the progress and achievements of the British shipping yards. Although the submarine has caused heavy losses to the merchant marine, it is safe to say that the quick return of 6,500,000 men to industry at the close of the war will release a volume of labor energy that will rapidly make this wastage good. More than that, the United Kingdom has constructed more than 5,000 new industrial plants, equipped with modern machinery and scientifically organized to a degree never before attained. The war has shocked English industry into new life and made it vigorous beyond comparison with previous days of peace.

London a Great Exchange Market.

Let us recall, also, that 90 per cent. of the letters of credit issued for the financing of the foreign trade of the world before the war were cleared through London. Bills of exchange drawn upon London banks and acceptance houses were, in fact, the paper currency of the world. It is hardly necessary to mention that gold played a relatively unimportant and minor role in settling the balance of trade. It was, indeed, because the English nation made the pound sterling indisputably the equivalent of gold for more than a century past, and because English bankers maintained the highest standard of commercial honor that London credit gained universal acceptance. The vagaries and accidents of war, for a time, made dollar credit in New York as acceptable in the neutral markets as the pound sterling in London; but geographical, psychological and other conditions are bound to restore London to its former place in the world of finance after the close of hostilities.

Consider that London lies almost opposite the mouth of the Scheldt and of the Rhine, the great natural arteries of continental European commerce. Consider, further, that continental Europe has a population of more than 400,000,000, representing the greatest productive and consuming power in the world, and it will be easy to understand why London holds the strategic position as a money market in the business world. It is close to all the great exchanges, except that of New York, and has established lines of business communication which have been strengthened by generations of honorable dealing with Europe, the Near and Far East, Africa, Australia and India, as well as the New World. This has come about as much through British Imperial connections as by the nation's world-wide trade and commerce. So true is this that every nation carrying on trade of any import has been obliged to establish banks, or appoint representative agents, in the London money market. Its mail and cable facilities are unsurpassed, two-thirds of the submarine cable mileage of the world being owned in England. In normal times, fast trains and steamers connect London with every important commercial centre in Europe and beyond the Atlantic. It is curious to note, also, that because of its geographic position, London is able to carry on business, on the Stock Exchange, having intimate relations with such widely-separated markets as Tokio and New York on the same day.

English are Conservative Financiers.

Certain outstanding British characteristics have conspired to fortify London's position as an investment and banking centre. Englishmen are content to take small profits and to wait for low returns. As has often been pointed out—again by Sir George Paish, among others—the American financier has little patience for this type of business. Americans are more audacious; they have more of the gambling instinct than the Englishman. As a result the venture that will receive careful consideration in London cannot, because of competitive conditions in the United States, expect to secure the same attention in New York. It should be observed that the United States is, indeed, yet undergoing exploitation and development. Interest rates are at such a high level for safe investments within the Republic itself that it will be long, notwithstanding the expectations of an important element in the American population, before the United States will have funds to spare for the pioneer and needy nations of the world. This does not mean, of course, that American bankers will not compete sharply for a share of the available business of China and South America. This, however, will have to do rather with commercial than with investment enterprises. It may be expected that American financiers will also seek to secure concessions, especially in the Far East and in South America; but this will be linked up with industrial enterprise rather than with investment alone.

London's record in the past will tell tremendously in rehabilitating its world position after the war. It has been in the past the only free market for gold in the world; it has carried on an immensely important discount business; it has maintained remarkable stability in money rates; it has had the advantage of support from the British merchant marine; it has financed the foreign trade of the United Kingdom—the largest in the world; it has been undisturbed by tariff controversies; it has had powerful centralized banks, and practically, in the Bank of England, a central bank of issue; it has been remarkably free from panics; and has enjoyed the largest marine insurance business in the world. It is safe to say that these advantages will not disappear overnight.

In conclusion, it should be emphasized that New York and London will prosper most greatly in so far as they co-operate. As already said, the United States and the United Kingdom, through the exigencies of war, have co-operated in a remarkable manner in financing the requirements of the Allies. Whether the Anglo-Saxon alliance is given formal legal sanction or not, after the conclusion of hostilities it will remain an established fact. Everywhere throughout the British Commonwealth American goods, American capital and American settlers will be welcomed. Already American capital has been invested to the extent of more than $800,000,000 in the industries, the mines, the waterpowers and the timber limits of Canada. In the days to come we may be assured that the most friendly feelings will be manifested by Canada toward the United States. The destinies of the Anglo-Saxon nations are bound up with the rapprochement effected between the United Kingdom and the United States. The Republic has always found its richest markets in the United Kingdom; and it will find an expanding market there in the post-bellum period. New York and London will work in closest harmony in the field of finance, not only in South America, Mexico and Europe—where such large investments have already been placed—but also in the Far East and in Africa. The strength of London has remained undiminished, while that of New York has grown, and upon those two salient facts our hopes may be based for the relatively rapid rehabilitation of the nations ravaged by the enemy powers.

COCKSHUTT PLOW COMPANY, LIMITED

The manufacture of farm implements and machinery is one which is intimately associated with agriculture, and its prosperity depends, in a large degree, though not entirely, upon the transport of farming. The statement of the Cockshutt Plow Company, Limited, for the year ended June 30th, 1918, is much more favorable than that of the previous year. The net profits, after providing for depreciation, were $553,214, compared with $370,745 the last year, and $465,211 the year before. The quarterly dividend on the preferred stock at the rate of 4 per cent. per annum, absorbed $258,600; there was also transferred to contingent reserve the sum of $200,000, and $500,000 to capital reserve. These funds now stand at $1,000,000 and $1,500,000 respectively, in addition to which there is a merchandise reserve of $500,000, making a total of $300.000 000.

Dividends upon the preference stock at the full rate of 7 per cent. per annum, were paid up to June 30th, 1914. Owing to the outbreak of war, however, they were deferred on the next quarter, that is September 30, 1914, and nothing further was paid until November 1st, 1917, when they were resumed at the reduced rate of 4 per cent. per annum. There are, therefore, over 20 per cent. of deferred dividends which must be met before the common stock can receive anything, as the preferred shares are cumulative as to dividends.

During the financial year 1917, the company's business was somewhat affected by greatly increased costs, but this condition appears to have been remedied during the past year by an improvement in business. As a result of the transfer of such large sums to the reserve accounts, the surplus in the profits and loss account is now comparatively small, namely, $86,401.

The total production of the coal mines of British Columbia for the month of August amounted to 240,055 tons, or an increase of 13,467 tons over the July figures. Vancouver is taking lead with 145.266 tons, with the Crow's Nest mines second, with 78.910 tons, and the Nicolah Princeton district third, with 15,818 tons.

LAKE OF THE WOODS MILLING COMPANY

A new high record in net profits has been made by the Lake of the Woods Milling Company for the year ended August 31st, 1918. The net profit for this year is $857,914, or $288,167 more than for the previous year. After paying interest upon the $900,000 of outstanding bonds and 7 per cent. dividend upon the $1,500,000 of preferred stock, the balance remaining is $698,914, or about 33 per cent. upon the common. The usual dividend of 8 per cent. has been paid upon the common. The sum of $100,000 was written off the property and good will accounts, and $200,000 set aside to bond redemption account. This makes a total of $400,000 set aside to redeem the $900.000 of bonds which fall due in 1923. The amount of surplus is now $978,707.

The company has adopted a new form of presenting earnings, giving first the profits from milling, then profits from other sources, and finally the dividends received from the Sunset Manufacturing Company, which is owned by the Lake of the Woods Milling Company.

As a result of the regulations of the Dominion government, considerable change is indicated in the balance sheet. Instead of the heavy stocks of wheat and flour which were held in former years, there is now a small asset of this kind, the amount being $669,878, or about one-half the amount a year ago. Current liabilities have decreased and actual cash on hand has increased. Last year the company had $300,000 borrowed from the bank, which obligation has been redeemed. Accounts payable are also greatly decreased, and the company has $200,000 invested in Victory Bonds.

The liquidator of the Canada Home Investment Company, J. G. Forrester, has arranged for the presentment of a second dividend to creditors of that defunct institution, and soon will make formal application in the Supreme Court for the necessary permission. The first dividend was paid last December, when $42,000 was distributed. This time $35,500 will be distributed.

Finance Minister Opens Loan Campaign

Speaking at Winnipeg, Sir Thomas White States Terms of New Issue — Tax Free Five and One Half Per Cent. Bonds at Par and Interest—Three Hundred Million Asked, Half Billion Wanted — Five and Fifteen-Year Bonds

SIR THOMAS WHITE, minister of finance, opened the campaign for the second Canadian Victory Loan, with a stirring speech in Winnipeg on the evening of October 8th. The Industrial Bureau was crowded with men and women to hear the minister of finance speak on the new loan.

Five hundred millions of dollars is the amount required to be raised by the Canadian government to carry on Canada's part in the prosecution of the war. The minimum amount which the minister of finance asks for is $300,000,000. The larger amount will be raised if possible.

There are no 20-year bonds in this issue. Five and 15-year bonds will be available in the new loan.

SIR THOMAS WHITE,
Canadian Minister of Finance.

The selling campaign for the new loan will begin Monday, October 28th, and will continue until Sunday, November 16th.

The details of the issue follow:—

Through the prospectus of the 5th Canadian war loan—the Victory Loan of 1918—the Dominion of Canada will ask for a minimum amount of $300,000,000 with the right to accept all or any part of subscriptions in excess of that sum, to be used for war purposes only and to be spent wholly in Canada. The rate of interest will be 5½ per cent. per annum, payable May 1st and November 1st, and the denominations $50, $100, $500 and $1,000. The loan will be offered in two maturities—5 year bonds due November 1st, 1923, and 15-year bonds due November 1st, 1933.

The issue price will be 100 and accrued interest for both maturities, making the income return 5½ per cent. per annum. Provision is made for payment in five instalments as follows: Ten per cent. on application, 20 per cent. on December 6th, 1918; 20 per cent. on January 6th, 1919; 20 per cent. on February 6th, 1919; 31.16 per cent. on March 6th, 1919. The last payment of 31.16 per cent. covers 30 per cent. balance of principal and 1.16 per cent. representing accrued interest at 5½ per cent. from November 1st to due dates of the respective instalments. As a full half-year's interest will be paid on May 1st, 1919, the cost of the bonds will be 100 and interest.

Payment may be made in full at the time of application at 100 without interest, or on any instalments due date thereafter with interest accrued at 5½ per cent. per annum. Bearer bonds will be available for delivery at the time of application to subscribers desirous of making payment in full. Bonds registered as to principal only, or as to both principal and interest in authorized denominations, will be delivered to subscribers making payment in full, as soon as the required registration can be made.

Free From Taxation.

Bonds of this issue will be free from taxation—including any income tax—imposed in pursuance of legislation enacted by parliament of Canada, and will carry the privilege of conversion into any future domestic issues of like maturity or longer, issued by the government, during the remaining period of the war.

Subscription lists will open on October 28th, 1918, and close on or before November 16th, 1918.

Importance of Loan.

In the course of his address the finance minister said:—

"The Victory Loan is an undertaking of the utmost national importance to the people of Canada. Its success is absolutely essential to our continued prosecution of the war and the maintenance of prosperity upon which our war effort necessarily depends. Canada relies upon the Victory Loan to enable her to 'carry on.'

"It is not necessary to speak of the achievements of the Canadian forces in France. Their valor has won the admiration of the world and will for all time shed lustre upon the name of Canada. We can all hold our heads higher by reason of what they have done and suffered in Europe. They saved Calais in 1915 and Calais is the key to the invasion of England. They took the famous Vimy Ridge. They have been in the forefront of the victorious fighting of this summer. Where they have led victory has followed. They were the first to break through the famous Hindenburg line. They were the spearhead of the British attack at Cambrai. Without boasting they may be regarded as the most formidable fighting unit in Europe to-day. Under Sir Arthur Currie they are playing a great part in crushing the world menace of German militarism. Our war effort has been a great undertaking for Canada. We are fighting our soldiers thousands of miles from their homes in the Dominion, from Nova Scotia to British Columbia. Over five hundred thousand called to the colors; over 400,000 sent overseas—it is a wonderful record for the Dominion with its sparse population of diverse nationalities spretad over a country as large as Europe. Our men have had to be raised, equipped, given preliminary training in camps in Canada, carried overseas, trained specially in England and then sent to France. An army constantly requires food, clothing, ammunition, pay. For these purposes money must be raised. Finance underlies all the operations of war. To date Canada has spent about a billion dollars on the war. The main purpose of the Victory Loan is to raise money for the continued prosecution of the war until final victory is achieved. Money can be devoted to no higher or nobler purpose than this. The Victory Loan is essential that we may carry on the war. Behind the gun the man, and behind the man must be the dollar.

"Every Victory bond is a financial soldier fighting against the Kaiser. Canada can show the solidarity of her people and her determination to see the war to a victorious ending by an overwhelming subscription to the Victory Loan.

Necessary to Prosperity.

"There is another and most vital aspect of the matter. The success of the Victory Loan is absolutely essential to the

OUR SECOND VICTORY LOAN

The terms of Canada's second Victory Loan, which is our fifth internal war loan, were announced by Sir Thomas White, minister of finance, speaking in Winnipeg on the evening of the 8th instant. Most of the features were, of course, already known.

The issue will be tax exempt, in spite of the considerable criticism which has been concentrated upon the exemption from taxation of our national war loans. The bonds will bear interest at 5½ per cent., will be dated 1st November, 1918, and interest will be payable semi-annually on the 1st of May and November. Two maturities will be available, five and fifteen years, respectively. Like the last issue the price will be par, but with this difference that accrued interest will be charged to purchasers of this loan, whereas they secured the bonds of the last issue at a flat price. The result is that this loan costs exactly 100 and accrued interest, no matter whether the purchaser pays in full immediately or pays by instalments. In the former case he has no accrued interest to pay because he is buying the bond at the beginning of a six months' interest period. In the latter case he must, in addition to paying 100, also pay 1 1/16 per cent. on the last instalment date on account of the interest which has accrued on the unpaid differences up to that time. In the case of the last loan, investors secured a full six months' interest without having to pay accrued interest when they purchased by instalments, and when they paid in full they received also a cash discount which reduced the price to about 99. This discount was a feature which cost the government many millions of dollars; while on the other hand, very few subscribers attached any appreciable value to it and its contribution to the success of the loan was quite insignificant.

Last time we were asked to subscribe for $250,000,000 and we subscribed over $400,000,000. This time we are asked to subscribe $300,000,000 but a total of $500,000,000 is expected. The government reserves the right to use any part or all of the subscriptions above the nominal total of $300,000,000.

Another very commendable feature of this issue is that the bonds will be ready for sale over the counter immediately upon payment in full. This entirely eliminates the objectionable features of the last loan by which two exchanges had to be made in addition to the original subscription. It will, it is likely, result in more purchasers of bearer bonds because the option which is offered to the purchaser who is prepared to pay in full is either that of having possession of a bearer bond immediately, or of waiting for an unavoidably indefinite time to get a registered bond.

THE FOURTH LIBERTY LOAN

The fourth Liberty Loan campaign was launched in the United States on Saturday, September 28th, and will extend up to and including the 19th of October. The amount asked for is $6,000,000,000, or double the amount requested last time. The amount subscribed and allotted in the case of the third Liberty Loan was $4,176,516,850, so that there is a substantial margin by which the subscriptions to the last loan must be exceeded in order to reach the nominal total of this loan. The interest rate is 4¼ per cent. In the case of the first loan it was 3½ per cent., on the second loan 4 per cent., and on the third loan 4¼ per cent. The bonds are dated October 24th, 1918, and are due October 15th, 1938, being redeemable, however, after fifteen years. The interest days are October

15th and April 15th, the first coupon, falling due on the 15th April, 1919, being for the odd period of 173 days. Like the last loan it is not convertible into future issues. The denominations both of coupon and registered bonds range from $50 to $10,000, and there are also registered bonds for $50,000 and $100,000. As in the case of the last loan there is to be a sinking fund of 5 per cent. annually during the period of the war and for one year thereafter.

Bonds of the first Liberty Loan issued in the United States are exempt as to principal and interest from all federal, state and local taxes except estate or inheritance taxes. Bonds of the last two loans and of the fourth are exempt from normal federal income tax and all state and local taxation, also interest on an aggregate of $5,000 worth of bonds of the second or third loan or bonds converted into second or third loan is exempt from all federal income war profits and excess profits taxes. In addition there are a number of other exemption features which are somewhat complicated.

According to recent reports the nation has entered into this campaign with enthusiasm greater than ever, and this, no doubt, is necessary for the success of the campaign. The most interest is probably centred upon the campaign in the New York federal reserve district, the quota for which is $1,800,000,000, this being the largest and wealthiest centre. Upon the opening day of the drive hundreds of bond booths were opened throughout New York City, and a rush of subscribers was experienced. Among the large subscriptions entered early in the day was that of the Prudential Life Insurance Company for $30,000,000 of the issue, that of the New York Life Insurance Company for $25,000,000, the Metropolitan Life Insurance Company for $25,000,000, the United States Steel Corporation for $40,000,000, and the Chemical National Bank for $3,000,000.

AMERICAN WAR CONTRACTS

Among the general public the impression had prevailed that the volume of American contracts for shells and other war supplies, placed with Canadian manufacturers, was likely to increase during the remainder of 1918, and that the special war business thus derived from the neighboring country would perhaps go some distance in offsetting the decline in British orders. Some large American contracts were placed here quite recently, and it has been thought that others probably would follow in quick succession. Last week's statement of the War Industries Board at Washington, to the effect that the United States Government is discontinuing as rapidly as possible purchases of army supplies in foreign countries, apparently points in the opposite direction. It should be remembered, in this connection, that Great Britain has been supplying the American armies overseas with a large quantity of items needed by them which could not be provided quickly enough in the United States. The supplies purchased in Britain would be much greater in value than those contracted for in Canada.

In the course of this great war the need for this or that class of supplies often rises suddenly, and it cannot be postponed without endangering or injuring the military prospects. So, no matter how much the government in question may wish to further the interests of its home industries, it is forced, in many cases, to place its orders where there is assurance of expeditious completion. That is part of the explanation why Canadian manufacturers received extensive orders from Washington for shells, etc. They had their plants already equipped with the necessary machinery; the skilled labor was there; finally, they had an experience of two or more years in turning out similar products for Britain, and the American authorities knew they could depend upon getting goods that would measure up to the specifications. Under the circumstances, the shells being urgently needed and the Canadian facilities being there ready for use, Washington could not waste time waiting for numerous concerns in the United States to convert their plants into munition works and experiment as regards filling the contracts.

It is generally supposed also that the United States Government was willing to do something to help Canada maintain the equilibrium of her exchange market. Ordinarily, assistance in regard to this detail is rendered through the agency of loans or credits. While the American Government has made direct loans to allied countries aggregating over $7,000,000,000 (Belgium, Cuba, France, Great Britain, Greece, Italy, Russia and Serbia participating in these loans), none has been made direct to Canada. So, by giving Canada war orders, it was possible to benefit her exchange position in the same way as if a direct loan had been made. Then, again, the United States authorities have permitted Britain to expend in Canada a part of the proceeds of loans secured at Washington. The total amount loaned to Great Britain since the United States entered the war is over $3,700,000,000; and apparently of the proceeds of these British loans granted during the year ended June 30th, 1918, $400,000,000 were expended in Canada. This, also, has helped Canada to surmount the exchange difficulties connected with her large trade balance due to the United States. As regards the American army contracts, it is likely that we shall continue to get a substantial share. With five or six million men under arms, it will assuredly be necessary to call upon Canada for some of the supplies.

POTATO CROP BETTER THAN LAST YEAR

With a record crop of ten million bushels in Manitoba and a big crop in New Brunswick to offset a somewhat smaller crop than usual in Ontario and some other parts of Canada, the total yield of potatoes this year promises to be above that of 1917, according to reports received by the Department of Agriculture from all parts of the Dominion. The New Brunswick crop is estimated at 8,650,000 bushels, as compared with but 5,000,000 bushels last year. With a smaller acreage Prince Edward Island will have as good a crop as last year, and Nova Scotia and Quebec will have good average crops. Despite early frosts Saskatchewan and Alberta will have fair crops of tubers, and British Columbia will have a good average yield.

ACTUARIAL SOCIETY OF AMERICA

Report of Fall Convention Held in Montreal, October 10th and 11th

The Actuarial Society of America held its fall meeting in Montreal, Thursday and Friday, October 10th and 11th. The meeting was arranged in Montreal at the invitation of the Sun Life Assurance Company, of which the president, Mr. Thomas B. Macaulay, is a former president of the Actuarial Society, and Mr. Arthur B. Wood, actuary, is now a vice-president of the society.

The society on Thursday evening held its usual dinner at which were present, besides the members, a number of invited guests, among them being a number of the officers of the Sun Life. The meeting itself was devoted almost entirely to the reading of papers on actuarial subjects and the discussion of papers read at the previous meeting, all of which appear in the "Transactions."

At a time like the present, when so many new and important problems arising both directly and indirectly from the war, the importance to the actuaries and to the companies they represent of a meeting where they are able to interchange views and discuss such questions is enhanced very greatly.

Disablity Claims.

Among the papers presented were the following: "An Analysis of Claims for Total and Permanent Disability Benefits," by Arthur Hunter. The at all general adoption of policies providing for benefits in the event of total and permanent disability is a recent thing. There is very little experience under such policies available. Mr. Hunter in this paper has brought together the experience of three companies in regard to claims allowed. This experience is not that of the expected to the actual claims, of which an investigation had not been made, but merely the proportion of the claim allowed assignable to each cause of disability.

In his analysis different factors such as age of policy, type of disability benefit granted and methods of selection which might very considerably vary the proportion in which different causes of disability appear were examined. For instance, attention was called to the fact that if a company were more liberal in granting in policies, disability benefits in case of light-weights at young ages or where there was tubercular family history, the proportion of the claims due to tuberculosis would naturally be greater than in the experience of a company which was less liberal in accepting such risks. A company in which more of the policies had been of short duration would show a higher proportion of claims from tuberculosis than from some cause which took longer to develop.

On the other hand with regard to the same cause—tuberculosis—Mr. Hunter called attention to the fact that the duration of the disability was not apt to be long, so that an average claim from this cause of disability was of far less financial importance than where the cause was something which would mean payment of the benefit for a much greater number of years. An examination of the claims of the company showing the largest proportion of claims from tuberculosis showed that within two and one-half years after the claim was approved, three-quarters of the insured had either died or recovered.

VICTORY BONDS will never become "scraps of paper."

They are the best secured investment in the world.

The figures that he obtained showed tuberculosis gave by far the largest percentages of claims. The percentage varied from 45 of the total claims where it was highest to 30 per cent. where it was lowest. The next percentage of claims come under the heading of "Insanity and Paresis." This runs in the different companies from 31 per cent. to 23 per cent., the company having the 31 per cent from this cause being the one that had 30 per cent. from tuberculosis. No other one cause showed a percentage of claims to compare with either of these mentioned.

A further interesting analysis is that of the tuberculosis claims for one company according to the weight of the insured at time of application. It showed that 77 per cent. of these claims were for those underweight or average weight, so that only 23 per cent. were on those over average weight. A little different grouping showed only 11 per cent. of these claims to be on risks which were over 5 per cent. above the average weight.

Mortality and Temperance.

A paper was read entitled "Note on Mortality by Habits Representation," by P. H. Evans. This paper adds another investigation on the question of the effect of alcohol. The policies were divided into four groups, classified according to the use of alcohol. Mr. Evans took note, in speaking of the results, that there was a tendency of those who drink a considerable amount to under-estimate the amount of alcohol used, with the result that undoubtedly many really heavy drinkers would be included with the class of moderate drinkers. The results are in accordance with the results in previous experience of various companies—namely, that the total abstainer class showed the lowest mortality and the mortality increased with the amount of alcohol taken. The four groups that Mr. Evans made were:—

1. Total abstainers.
2. Moderate drinkers in which was included those who did not exceed Anstie's limit of 1¼ ounces of alcohol a day.
3. Regular beer drinkers which included those taking four or more glasses in any one day or a daily use of one or more.
4. Regular spirit drinkers.

The results found for the different classes were by the standard of the "Medico-Actuarial Table of Mortality," and were found to be 83-3/10 per cent. for total abstainers, 97-2/10 per cent. for group 2, 111-3/10 per cent. for group 3, and 128-9/10 per cent. for group 4.

Bond Holdings.

Another paper read at the meeting was "Valuation of Bond Holdings of a Life Insurance Company," by Frederick H. Johnston. In this paper, the situation of a company changing from a market to amortized values of its bond holdings is considered. A difficulty in such change is the extreme fluctuation it would make in the valuation because by the amortization method bonds are valued on the cost basis, whereas practically all bonds now have a much lower market value than that of a few years ago, and consequently, for bonds bought some time ago, a much lower value than the cost basis. This is true even where an average market value is taken as the basis of market valuation, instead of the actual value on December 31st. A change from market to amortized valuation would, under such circumstances, make a jump in the company's assets, and a comparison of the two years' statements would not at all reveal the true trend of affairs in the company. Mr. Johnston proposes, as a remedy for this, to use for bonds purchased prior to 1917, the market value as of the end of 1917, and later valuations by the amortization method, thus substituting the value in 1917 of bonds already held in place of the cost price. In this way a change from market to amortized valuation would involve no abnormal fluctuation. Thus, the paper is a suggestion of a method of avoiding the confusion of a change from one plan to another.

The Leaside branch of the Imperial Bank of Canada opened its doors for business on October 8th. The building is on the south side of Laird Avenue, opposite the new administration building of the Leaside Munition Works, and conveniently situated to take care of the banking business of Leaside. Mr E. Kirkbride is the manager. Many accounts were opened by employees of the munition works and others.

1918—VICTORY LOAN BULLETIN—1918

CAMPAIGN NOTES COMMITTEE REPORTS PERSONAL MENTION

The Editorial Department will be pleased to receive and publish each week items of news for this page.

CALGARY MAKES ARRANGEMENTS FOR LOAN CAMPAIGN

Arrangements for the Victory Loan campaign in Calgary, commenced on October 2nd, when a public organization was held. Practically the same committee as handled the drive last fall will be in charge of the campaign again, and it is understood that the actual sale of bonds will commence on October 28th, although there has been nothing definitely announced yet. The publicity campaign has started with Mr. H. E. Middleton as chairman of the committee.

J. H. GUNDY,

Of Wood, Gundy & Company, Toronto, Chairman, Dominion Special Subscriptions Committee.

VANCOUVER ISLAND GETS INTO LINE

Mr. W. H. Malkin, chairman of the British Columbia committee, who will have in hand the campaign for the flotation of the forthcoming Victory Loan, arrived in Victoria recently to take up with the Vancouver Island committee the details of the preliminary arrangements for the local support of the country's finance.

The attraction of a high interest-bearing bond on all Canada, payable in instalments as the money is saved, is expected to appeal to the hundreds of thrifty workers now enjoying so much prosperity.

Up to the present no word has been received from Ottawa as to the proportion allotted to Vancouver Island, but it is the general feeling of those connected with the local organization that the loan will be a success.

A meeting was held on September 30th, in South Vancouver for the purpose of organizing for the Victory Loan drive.

BANKS WILL HAVE NO TROUBLE IN HANDLING CAMPAIGN

Mr. Crawford Gordon, assistant manager of the Canadian Bank of Commerce, Winnipeg, who had a good deal to do with the practical handling of the subscriptions for Victory bonds at that bank last year, said that he did not anticipate any trouble in the matter this year.

Last year a large number of girls were being taken into the service. This year all these employees have had the benefit of a year's training and were that much better fitted for the work.

The clerical work in the banks will also be considerably reduced this year in amount. One great advantage will be that in many cases deals can be closed on the spot. The banks will have the definitive bonds on hand at the opening of the campaign, and the subscriber who is prepared to pay in full will get his bond right off the reel.

With reference to the part which the Bank of Commerce had taken in the movement last autumn, it was stated that 116,000 different persons had paid money through the institution and that the total amount of money handled was in the neighborhood of $80,000,000; almost one-fifth of the total. Officers of the bank feel certain that there will be no diminution in these totals in the fall of this year. On the contrary it was confidently expected that there would be increases in every province and practically at every office.

P. P. COWANS,

Of McDougall & Cowans, Montreal, Vice-Chairman, Dominion Special Subscriptions Committee.

Chatham's objective in the three-million Victory War Loan drive in Kent is $500,000. The various county towns hope to raise $300,000. The rural communities hope to raise $1,000,000, and the balance, it is expected, will be assured by special loans.

THE BANK OF OTTAWA

Established 1874
94 Branches in Canada

SPECIAL COMMITTEES FOR SASKATCHEWAN DIVISIONS

Mr. E. S. Miller, chairman of the provincial special subscription committee for the Victory Loan, has appointed the following special subscription committee for Regina: W. E. Mason, chairman; W. G. Styles and P. F. Conrod. Similar committees have been organized in the divisions of Saskatoon, Moose Jaw, Prince Albert, Weyburn, Swift Current, Yorkton and Battleford.

All subscriptions of $5,000 or more will be listed as "special." On all subscriptions of $5,000 to $25,000 credit will be given to the district in which the subscriber lives, and the usual commission will be paid to the regular canvasser in charge of the block or district in which the subscriber lives.

PRINCE ALBERT ORGANIZED FOR VICTORY LOAN

Details of the divisional organization of the Victory Loan campaign for the Prince Albert division were received at provincial campaign headquarters on October 1st. Prince Albert is thoroughly organized, and the officers there are confident that the division will make a creditable showing when the returns from the campaign have been received.

Mr. N. W. Morton, of Prince Albert, was chosen as chairman of the executive for the Prince Albert division. The executive consists of the following:—Prince Albert, W. O. McDougall, A. L. Mattes, P. W. Mahon, F. C. Baker, T. J. Agnew, S. McLeod, A. Knox, Dr. S. B. McMillan, H. M. Hueston, Andrew Holmes, E. T. Bagshaw, and A. M. Thompson; Tisdale, J. R. Homer; Star City, J. McDonald; Kinistino, J. W. Roscoe; Melfort, Sidney Moore; Shellhook, W. Trenholme; Parkside, R. McIntosh; Leach, F. A. Smith; Marcelin, J. I. Lalonde; Blane Lake, S. B. Hemstead; Wakaw, Dr. Scott; Holy, M. A. Bushy; Bero Green, Alex. McQueen; Hudson Bay Junction, B. F. Noble; Birch Hills, J. R Taylor; Hebden, Oscar Demers.

WEEKLY BANK CLEARINGS

The following are the bank clearings for the weeks ended October 6th, 1917, and October 3rd, 1918, respectively, with changes:—

	Week ended Oct. 3, '18.	Week ended Oct. 6, '17.		Changes.
Montreal	$ 91,763,240	$ 88,342,880	+	$ 3,420,360
Toronto	66,541,056	63,589,986	+	2,951,070

New Westminster	589,562	488,015	+	101,547
Peterboro	771,119	752,850	+	18,269
Sherbrooke	1,041,686	647,601	+	394,085
Kitchener	653,008	669,544	—	16,536
Totals	$280,021,714	$280,561,645		$ 1,520,231

The Toronto bank clearings for the current week are $74,229,847, compared with $54,244,116 for the same week in 1917, and $43,624,612 in 1916.

Mr. A. R. Martin, mentioned last week as being appointed manager of the Imperial Bank's branch at Queen and Yonge Streets, Toronto, was formerly assistant manager of their principal Toronto branch. The manager of the main Toronto branch is Mr. G. G. LeMesurier.

PERSONAL NOTES

SIR GEORGE FOSTER, Canadian minister of trade and commerce, has been in the United States helping the fourth Liberty Loan.

MR. J. H. RIDDEL, manager for Canada of the Eagle, Star and British Dominions Insurance Company, Limited, is making a business tour of the West.

MR. W. T. PERRY, general manager for Canada of the Ocean Accident and Guarantee Corporation, is at present in the Maritime Provinces, calling upon the company's agencies in that territory.

MR. A. D. PARKER, formerly of F. J. Smith and Company, real estate, Toronto, has joined the head office of the Union Trust Company, Toronto, as superintendent of its real estate department.

HON. C. E. BALLANTYNE, minister of marine and fisheries, has been elected a director of the Royal Trust Company. Mr. Ballantyne succeeds the late Lieut.-Col. Barlett McLennan, D.S.O., killed at the front.

MR. E. J. HARVEY, supervisor of agencies for the North American Life Assurance Company, Toronto, has returned from his trip to the West. Mr. Harvey states that the general outlook for business is better than ever before.

MR. P. A. ROBBINS, managing director of the Hollinger Consolidated Gold Mines, has joined the forces of the United States for overseas service. Mr. Robbins was general manager of the Hollinger all through its early developments, up till seven months ago.

Mr. T. E. GODSON, mining commissioner of the province of Ontario, accompanied by S. F. Sutherland, chief inspector of the mines of the same province, were visitors to Vancouver recently. They are on a trip of general investigation of mining departments of the various provinces.

MR. JAMES BONAR, director of the Royal Mint, Ottawa, visited recently the Porcupine gold mines in order to thoroughly acquaint himself with present conditions there. He was accompanied by Messrs. B. Pearson, Gordon F. Dickson and A. L. Entwhistle, other officials of the Ottawa Mint.

MR. T. W. MARTINDALE, one of Nanaimo's most prominent citizens, has associated himself with A. E. Planta, Limited, of that city, and will be in charge of the real estate branch of the firm. Mr. Martindale has been a member of the firm, Martindale and Bate, for some years past, carrying on a real estate business.

MR. G. W. MORLEY, LL.B (formerly secretary of the Canadian Bankers' Association) announces the formation of the legal firm of G. W. Morley and Company, with offices at 802 Lumsden Building, Toronto. Mr. J. A. McAndrew, formerly the official referee for the Ontario Bank and the Farmers' Bank of Canada, is named counsel.

CANADIAN PACIFIC RAILWAY CHANGES

As we go to press it is announced that Lord Shaughnessy has resigned as president of the Canadian Pacific Railway and is succeeded by E. W. Beatty, vice-president. Lord Shaughnessy will retain the position of chairman of the board of directors. Sir George Bury retires from his office of vice-president on account of ill-health, and is succeeded by Grant Hall, who has been vice-president in charge of western lines.

Lord Shaughnessy has been president of the Canadian Pacific Railway since June 12th, 1898, and is one of the best-known men in the British Empire. He joined the railroad in 1882 as general purchasing agent.

MONEY MARKETS

Messrs. Glazebrook and Cronyn, exchange and bond brokers, Toronto, report the following exchange rates to *The Monetary Times*:—

	Buyers.	Sellers.	Counter.

COMPANY LAW IN CANADA

Recent Decisions Are Reviewed in Address Before Convention of Dominion Association of Chartered Accountants at Montreal

BY THOMAS MULVEY,
Under-Secretary of State for Canada.

The Bonanza Creek Mining Company Case.

No apology need be offered in submitting for your attention a most abstruse and complicated question of company law. I have had the pleasure of many opportunities of addressing accountants on similar subjects and always found that a discussion of company law and practice, however involved, was fully appreciated by members of the Association of Chartered Accountants. I may add that the appreciation of accountants upon this subject is even greater than that of an average body of lawyers. Accountants generally and lawyers exceptionally deal with company matters. If an apology is required, it should be given to their lordships of the Appellate Division of the Supreme Court of Ontario. The observations and conclusions to be submitted to you are in direct conflict with the judgment of that tribunal.

The criticism of judges has, of late, been a rather notorious affair; in fact, many of these criticisms descended to personal attacks upon the judges. This is very regrettable, as it is unnecessary and has a tendency to promote disrespect not only of judges but of the law. Nevertheless, judges frequently err in their opinions, and as a question of vital importance to the business community is involved in the judgment referred to, the opinions of the judges should be discussed. Moreover, the judgment in question is of a tribunal of the province of Ontario. The subject has not been before the Courts of the province of Quebec or any other province of the Dominion, and for that reason, it is eminently proper to be discussed in the province of Quebec.

The case in question is Edwards vs. Blackmore, decided on the 16th of February, 1918, and reported in the Ontario Weekly Notes, Volume 13, page 423. The case has not yet been reported in the ordinary official reports. The action was brought upon promissory notes made by Burks, Limited, a company incorporated under the Ontario Companies Act, for the purpose of carrying on a real estate business. The promissory notes were made on account of a purchase of machinery and patent rights for the manufacture of machinery for pressing clothes. The company raised the defence that the contract for the purchase of the machinery and patent rights was ultra vires, and the notes were, therefore, not binding. The judgment did not uphold this defence and decided that as the Bonanza Creek Gold Mining case before the Privy Council held that a company incorporated under the Ontario Companies Act could carry on business as a natural person might, the doctrine of utra vires had no application, and the company was liable. A further ground was added by the amendment of section 210 of the Ontario Companies Act in 1916, which declared: "That every corporation or company heretofore or hereafter created—by or under any general or special act of the legislature of Ontario shall, unless otherwise expressly declared in the act or instrument creating it, have and be deemed from its creation to have had, the general capacity which the common law ordinarily attaches to corporations created by charter."

The decision of the Privy Council in the Bonanza Creek Gold Mining Company case came as a shock to Canadian lawyers. The grounds for this decision had never been raised in Canada, although the subject had been under discussion for upwards of ten years. Canadian lawyers had always considered companies incorporated under the various general acts to be statutory companies, and, since 1875, the decision of the House of Lords in the Ashbury Railway Carriage Company vs. Riche, has been held to be binding by the Courts. It had never been suggested that Canadian companies were common law companies, or had any attributes of such companies, and the doctrine of ultra vires was maintained.

The legal public have waited for the last two years for an interpretation of this decision by the Canadian Courts, and it is fair to say that the decision in Edwards vs. Blackmore must be considered as even a greater shock than that received from the Bonanza Creek Mining Company case decision. It strikes at the root of all our notions respecting company activities, and if that decision is ultimately held to be good law, the difficulties which are raised should be settled by legislation. The effect of the judgment is this, that the shareholders have no control whatever over the moneys which they subscribe towards the capital of a company. In Edwards vs. Blackmore it held that the moneys of the shareholders subscribed for the purpose of carrying on the business of a real estate company were diverted to the business of pressing pants and this was done by the directors without any reference whatever to the shareholders. It may be that under conceivable circumstances a real estate company might properly enter into such a contract. If the company employed a very large number of men and in the contract of service agreed to board, lodge and care for the clothes of the men, it might be found an economic necessity to provide modern methods of pressing pants.

It follows from this decision that directors may use the money of the company in any way they may desire, and the shareholders have no control except in the appointment of directors in whom they may have confidence. An ordinary mercantile company may find its money locked up in real estate or in a mining speculation or in any transaction which the directors may enter. If shareholders are to be left in this way without any assurance that their capital will be used for the purposes for which they subscribed it, the conduct of ordinary business through the means of companies is at an end. No one would risk his capital in an enterprise where no limitation of the business of the company was provided, and the directors could use capital of the company as they saw fit.

Review of Company Law.

I propose submitting for your consideration some arguments from which it may appear that the conclusion of the Ontario Court is wrong in dealing with the effect of the decision in the Bonanza Creek Mining Company case. In order to develop this argument satisfactorily, it is necessary first to consider, so far as we can, the nature of a common law company and the methods which such a company followed in carrying on its business; secondly, the history and purpose of the object clause of the charter; thirdly, the decision of the Exchequer Chamber in Riche vs. Ashbury Railway Carriage Company; fourthly, the conclusions of the Judicial Committee of the Privy Council in the Bonanza Creek Mining Company case, and then to apply these conclusions to the judgment of Edwards vs. Blackmore.

The idea of a company is not modern. It can be traced back to the time of the Roman Republic. Companies were then incorporated to farm out the revenues of various conquered provinces. It might be interesting to dwell upon the growth and development of the company idea, but it is unnecessary for our purpose. The Bonanza Creek Mining Company case and the amendment of the Ontario Companies Act referred to, attribute to companies the general capacity which the common law ordinarily attaches to corporations created by charter, and it will be necessary to study only the common law or the chartered company of England. There is some difficulty in this. The old books and the old cases throw very little light upon the internal management of such companies. A few of the old cases relate to the authority to pass by-laws and to the transmission of shares, but the bulk of litigation relating to common law companies deals with questions which now come under the head of municipal law. The towns and boroughs of England were erected by common law charters. With respect to these there was a great deal of litigation, but the judgments cast very little light upon the methods of control and management of trading corporations.

Capital at First Not Fixed

The history of many common law companies established for the purpose of trade such as the Russia Company, the Ginny and Binny Company, the East India Company, the Hudson's Bay Company, and many others that might be mentioned, deals more particularly with the development of their trade than with their methods of management. There is, however one pertinent fact shown in these histories, that it was not until almost the end of the 17th century that these trading companies had a fixed capital. It was usual that the members or adventurers, as they were called, would subscribe capital for each venture, and the profits, together with the capital, were returned on the conclusion of the adventure. In the case of the East India Company, from the year 1601 to 1612 capital was subscribed for each voyage, and the profits of each were divided, together with the subscription. The first joint stock was subscribed in 1613 and the fourth in 1642.

Your Final Settlement

This is the title of an interesting and instructive booklet which you should read.

Settlements—the final closing of business matters—are important.

The final settlement of your business matters is, therefore, the most important thing that you will ever face.

"Your Final Settlement" makes some interesting suggestions about it.

Mailed to your address on request, and we believe when you have read it, you will want to discuss the question of your will, and your Executor and Trustee with us.

TRUSTS AND GUARANTEE
COMPANY LIMITED
BRANTFORD **TORONTO** CALGARY
JAMES J. WARREN
PRESIDENT
E. B. STOCKDALE
GENERAL MANAGER

The inference to be drawn from this is that the company in each case went back to the shareholders or members for the purpose of obtaining authority and the capital to carry out each voyage.

The control of shareholders or members of the common law company is perhaps more particularly shown in the methods of passing by-laws. The directors or governors of these companies had no right to pass by-laws. The members alone had authority to pass by-laws.

Authority of Shareholders.

These two instances bring out clearly the difference in the control and management of common law companies and the ordinary modern company, and indicate that modern methods should not be adopted in the management of common law companies without investigation. Under the Dominion and Ontario acts it is the directors who pass by-laws and administer the capital once it has been subscribed. The control of the modern company under the Companies Acts is more greatly in the hands of the directors. In the common law company the shareholders had larger control and they are the ultimate seat of authority as undoubtedly they are in the modern company, but they are reached through different machinery.

There is no question whatever but that the capacity of a common law company was unlimited, and that there was no restriction on the nature of the business which such a company could carry on. The doctrine of ultra vires had no application. The statement that a common law company "has the capacity of a natural person to acquire powers and rights" can have no application in considering the methods by which such a company may carry on its business. This is clearly shown by the well-known principle that the company can carry on business only by agents. A natural person is under no such limitations. The question now for consideration is how that capacity must be exercised. While the Bonanza Creek Mining Company case decided that the capacity of a company under the act is unlimited, that judgment makes no reference whatever to the method by which that capacity may be brought into play. It makes no mention of the authority of the directors, whether and how they are limited. The Edwards vs. Blackmore case, however, goes much further and in effect holds that neither the capacity of the company, nor the capacity of directors on behalf of the company is subject to any limitations and that the usual purpose or object clause may be disregarded.

Development of Object Clause.

This raised for consideration the purpose and effect of the object clause of the charter of a company. Considerable light is thrown on the subject by an historical study of the growth of the clause. No book or treatise on the history is available, and a study of the details and a comparison of object clauses are of great difficulty in Canada where the original papers are not accessible. Such material, however, as is available, is sufficient to give some light on the development of the subject. In the common law charters very meagre references to the purposes or objects of the corporation were set out. The object clause of the Hudson's Bay charter covers only a few lines. The purposes or objects in the Sutton Hospital are set out in the decision in that case and cover only a few lines. This appears to be the case with all common law corporations to which reference can be made.

In the year 1720 the statute known as the Bubble Act was passed. This statute, while it did not prohibit the incorporation of companies, made such difficulties for them that their creation was practically stopped. The Bubble Act prohibited trading under obsolete or forfeited charters for purposes not allowed in their charters and also prohibited business being carried on without charter. The Bubble Act was passed after the carnival of speculation in the early years of the 18th century, more particularly in the shares of the South Sea Company. It was drastic legislation and remained in existence for 105 years. Corporate trading was hampered, but it could not be suppressed as is shown by the history of companies in England to be the natural and efficient method of carrying on business. The act, however, was evaded by the creation of partnerships with large numbers of partners and with elaborate machinery for the conduct of business and a description of the nature of the business to be carried on. It is in this that we have the origin of the purpose and object clause of modern charters. The deed of settlement, as it was called, set out precisely the nature of the business the managing partners could carry on. The well known principle of partnership law that a partner cannot bind another except in a transaction within the partnership articles, was, in fact, the basis of the deed of settlement. The early company legislation of the 19th century was mainly directed at regulating partnerships of this kind and facilitating the means by which they might carry on business and conduct litigation. Labor on the legislation developed through provisions for registration and finally in the act of 1862.

Shareholders' Authority Maintained.

This history casts some light not only upon the subject of the legal principles which were applied in considering the memorandum of association even after the year 1862. Lord Justice Blackburn in the Ashbury Railway Carriage Company case appears to have that well in mind because he considers the Ashbury Railway Carriage Company practically as a partnership, and he applies the rule of construction of partnership articles in indicating that it is necessary that every shareholder should approve of a contract which is beyond the purposes and objects set out in the charter.

It is a matter of comment that very recent common law charters have all the detailed provisions respecting purposes and objects which are usually found in the memorandum of association of the ordinary company. The British South Africa Company was created by common law charter in the year 1889. The charter itself provides purposes or objects in 15 numbered sections. Moreover, it provided that within a year there should be executed by the then shareholders a deed of settlement more clearly defining the purposes and objects of the company. This deed of settlement was filed in the year 1891, and the purposes and objects cover many sections. These objects and purposes could not be for the purpose of limiting the capacity of the company, and it is reasonable to suppose that they were introduced for the purpose of limiting the authority of the directors.

United States and Canadian Law Different.

Such appears to be the history of the purpose or object clause in England, and it should be well in mind in considering the application of English case law in Canada. In the early part of the 19th century Canadian inspiration in company law came not from England but from the United States. The partnership idea of business companies was not developed here. United States company law is much more a development of the common law or chartered company of England.

The question of the capacity of directors was not raised or passed upon either in Riche vs. Ashbury Carriage Company or in the Bonanza Creek Mining Company case, but there are references in both these cases indirectly bearing upon the subject which may be fruitful in indicating the views of the Courts in these decisions, and for that reason it is necessary to consider the facts and the circumstances of these cases.

Riche vs. Ashbury Railway Carriage Company.

The facts of the Riche vs. Ashbury Railway Carriage Company case are as follows: The Ashbury Railway Carriage Company was incorporated for the purpose of manufacturing cars, coaches and railway equipment and carried on an extensive business in England. The company had dealings with Belgian and Spanish railway companies, and the directors entered into a contract to acquire a concession for the construction and operation of a railroad in Belgium. The plaintiff, Riche, in the case brought an action for damages for breach of this contract. A case stated for the opinion of the Court was in the Exchequer Court and on appeal in the Exchequer Chamber. The judgment of Lord Justice Blackburn in the Exchequer Chamber is of the greatest interest; in fact, as pointed out later on, it was largely on the views which Lord Justice Blackburn expressed in this case that the Bonanza Creek Mining Company case turned. It may be that the views expressed would not be followed in their entirety at the present time, nevertheless, they are pertinent for the purposes of considering the principles underlying the decision. For instance, Lord Justice Blackburn states as follows: "Up to a certain extent I believe there is no doubt as to the effect of the incorporation of a company under the Companies Act of 1862. The company is a corporation, and it is a partnership for trading purposes, for the objects for which the company is established. And by the articles in this case, as in almost all others, the management of the company's business is confided exclusively to a board of directors. And I apprehend that it it is clear that this board have the same authority to bind the company in the managing of the company's business that a partner or manager in an ordinary partnership, established at common law for the same objects, would have to bind the

WHY IS A TRUST CORPORATION THE BEST EXECUTOR?

Among many other reasons, because it has experts in every department of the work, because of its financial responsibility, because it is always accessible and is constantly engaged in furthering the interests of the Estates entrusted to its care, without such interruptions as death, absence, defalcation, sickness or neglect. Corporate executorship costs no more, sometimes less, than individual executorship. Read our booklet, "Making Your Will," sent by mail on request.

One of Our Inquiries Asked Us Lately

"How can I be sure of safety?"

There is no such thing in human affairs as absolute safety, of course. Nevertheless, it is now recognized that appointing a personal executor to deal with one's property after one's death is taking unnecessary chances.

The appointment of a trust company as executor removes the possibility of so many mishaps to an estate that there is a good reason for suggesting it to anyone who wants the greatest measure of safety for his family's future.

We shall gladly send you our booklets if you are interested.

National Trust Company, Limited

firm; an authority which to be valid must be exercised in cases within the scope of the ordinary business and transactions of the firm. If the board in a joint stock company, or a partner in a common law partnership, make a contract beyond their authority it does not bind the company in the one case, or the firm in the other."

Companies and Partnerships Differ.

At the time this judgment was given, the company law was in process of development. Many of the ideas formerly held that the company was merely a quasi partnership still persisted. Moreover, the learned Judge, after discussing the facts of the case went on to consider whether a corporation as distinguished from a partnership could carry out transactions not expressly authorized by the charter. There is no doubt, of course, of the correctness of the statement that the agency which is created by a partnership authorizes each partner to bind the partnership articles. In transactions beyond that the partnership is not bound unless each individual partner concurs and consents to the particular contract.

In analysing the corresponding proposition with respect to corporations, the learned Judge discusses at length the Sutton Hospital case, which was decided in the year 1612. The effect of that decision is that corporations created by charter, common law companies, are not limited in any respect regarding the business which they may carry on. In fact, they may carry on the business of a natural person. Due weight must be given to the concluding words of Lord Blackburn's judgment: "I do not see any risk of a company practically carrying on business for other objects than those named in the memorandum. The difficulty of obtaining the assent of all shareholders, and of proving that it had been obtained, is so great that no sensible man would trust to that and deal with the company on those terms. And I think, for the reasons I have above given, that in this case the unanimous shareholders have in fact assented to the ratification under the seal of the company of this contract; and that such ratification, at all events, makes the contract binding on the company in its corporate capacity."

The essential basis of Lord Justice Blackburn's decision is that the contract in question received the unanimous approval of the shareholders. There is no doubt that in coming to this conclusion he had in mind the partnership rule that the assent of all partners is necessary to bind a partnership.

Other considerations apply to a company under the Dominion Companies Act. Section 30 of the Interpretation Act, Chapter 1 of the Revised Statutes of Canada, which was first enacted in the year 1849, vests in the majority of the members of a corporation the power to bind others. The assent of the mere majority of the shareholders at a general meeting called for considering the contract would have been sufficient for the purpose of binding the company as Lord Justice Blackburn held the Ashbury Railway Carriage Company to be bound.

(To be Continued.)

NEW UNITED STATES NEWSPRINT PRICE

The judgment of the United States Circuit Court, fixing $70 a ton as a fair price for newsprint in the United States, against the $62 a ton fixed originally by the Federal Trade Commission, is accepted in paper trade circles in Canada to indicate a price of $78 in the near future, with important benefits to the Canadian pulp and paper industries.

A. L. Dawe, secretary of the Canadian Pulp & Paper Association, has stated that the manufacturers would regard the $70 a ton decision of the court as in the nature of a basic price, determined by conditions in April, and the Federal Trade Commission would have need to take into consideration the rise in costs of manufacturing since then, amounting to about $8 a ton.

As the new price of $70 a ton, apart from any further increase that may be ordered, is retroactive, the Canadian mills will collect $8 a ton additional on all the newsprint shipped to American publishers since April, these shipments amounting to about 88 per cent. of Canadian output. This will amount to a large sum and further supplements the collection of an additional $12 a ton on the tonnage shipped to Canadian publishers from July 1st to the latter part of September, as recently ordered by the Paper Controller in Canada.

SHORTEN FISHING SEASONS

Important new regulations with regard to lobster fisheries on the Atlantic coast are embodied in a statement issued on the 3rd inst., by the Naval Department. The statement shows that under the new regulations the fishing seasons have as a general thing been materially shortened, so as to afford needed additional protection to the fisheries. This action has been taken after investigation by experts of the department, and is in line with resolutions which were adopted at a conference held in Halifax last August between all those engaging in the industry.

UNITED STATES WAR TRADE BOARD

The following orders have been issued during the past few weeks by the United States War Trade Board:—

August 24th.—Further additions were made to the export conservation list effective August 24th, 1918.

August 26th.—New regulations were announced regarding the issuance of licenses for the exportation of tin and manufactures of tin.

August 23rd.—The board announced that it would consider applications for the exportation of compound lard to countries in North, Central, and South America, and the West Indies.

September 12th.—The board authorized the importation of fresh tomatoes from the Bahamas to New York, when moved as deck cargo upon Cuba and New York mail steamers.

September 12th.—The importation of mahogany logs and mahogany lumber was prohibited except for government use.

September 12th.—The board authorized the importation of such hides and skins from the East Coast of South America as had been purchased before June 15th, 1918.

September 12th.—The board announced that a general import license had been issued governing the importation of surplus ships stores and supplies, which the Bureau of Transportation of the War Trade Board might order to be removed from vessels in United States ports.

September 12th.—Applicants for licenses to import sheepskins were required to furnish an agreement not to sell the skins so imported at a price in excess of the prices fixed by the government.

September 12th.—Animal hair, with certain exceptions, was placed upon the list of restricted imports.

September 18th.—For some time past negotiations have been proceeding between the War Trade Board of the United States and a special Danish Commission in Washington, to arrange a suitable commercial and shipping agreement between these two countries. An arrangement has now been made which will assure to Denmark an adequate supply of foodstuffs, metals, drugs, etc., for its own needs, also a number of vessels sufficient to carry the enumerated commodities home to Denmark are being placed at its disposal. The rest of the Danish tonnage in overseas trade will remain at the disposal of the United States. Precautions have also been taken to prevent the re-export from Denmark of anything which might find its way to the Central Powers. The War Trade Board of the United States has announced the commodities which might be exported to Denmark and the quantities of each.

September 21st.—The importation from the Bahamas of fruits and vegetables and their products was to be permitted when they were brought upon boats of not more than 100 tons' register, and which are owned and operated by residents of the Bahamas.

The practice of thrift by the Canadian people now will bring a large accumulation of national savings to secure us individually and collectively against any trying change that might occur in the economic situation. It would make possible the continuance of Canada's splendid part in the war and the maintenance of our war financing on its present sound basis. The elimination of luxuries and non-essentials would, as a matter of fact, release labor and material for war purposes instead of using these great and scarce necessities for things that we could do without.

REBUILDING WINNIPEG'S BOARD OF TRADE

New Organization to be Comprehensively Large—Does Away With Overlapping of Older Institutions

BY W. H. CARTER,
President, Winnipeg Board of Trade.

The expansion of the Winnipeg Board of Trade grows out of a realization by the business and professional men of the city that a diffusion of effort handicapped the development of community spirit in Winnipeg. For more than a year the problem of co-ordinating the various organizations that deal with civic and commercial questions has been under consideration. A few enthusiastic men have made it their task to analyse the whole situation, and to educate the public to an appreciation of what united effort might accomplish. It was discovered that about 20 associations of one sort or another undertook to deal with subjects that should form the basis of action by the board of trade. All of these organizations were lacking in membership, in revenue and in the continuity of enthusiasm that is essential to progress. Their influence was not sufficiently wide or deep to ensure effective action, and, as a consequence, most of their labor was lost. When any big topic came up for discussion, it was likely to be handled by half a dozen similar bodies, with the result that confusion and overlapping destroyed any good effect that might have been created.

The necessity for reorganization became more apparent as the situation was studied. The small group of men who had taken the matter in hand decided that the Winnipeg Board of Trade, as the largest and most representative organization, should be used as the foundation of the new movement. Negotiations for an amalgamation with the Winnipeg Industrial Bureau were carried through successfully, and the reorganized body took the original name of the Winnipeg Board of Trade. A campaign for new members was undertaken and more than 1,500 applications were received. When the campaign was over the membership stood at 2,045, making the new board one of the largest, if not the largest in the Dominion of Canada. In addition to the business occupations that usually comprise a board of trade, barristers, physicians, dentists and other professional men enthusiastically linked themselves up with the new body. Social service work, civic and provincial officials and students of civic and economic problems also realized the opportunity of assisting in the task of helping to build up the community.

Influenced by United States.

The inspiration for the movement was furnished largely by a series of addresses from Mr. Edward F. Trefz, whose platform work in connection with the food conservation campaigns in the United States has given him an international reputation. His subjects on the necessity for vigilance and preparation brought home to the people of Winnipeg their problem and their opportunity. This we supplemented by an aggressive propaganda conducted by the Town Development Company, of New York, so that a complete system of education was provided.

The principal object of the board of trade is to bring into close harmony all the commercial, professional and civic interests so that full use may be made of the energy and enthusiasm of the citizens. The advancement and material welfare of the city in particular and Western Canada in general constitutes the programme for the future. As any reputable individual firm or corporation is eligible for membership, the possibilities of bringing about harmony and co-operation are almost unlimited. It is intended that every organization in the city whose members desire to promote objects similar to those for which the board of trade is working shall be invited to join it, either as a group or as individuals.

The new board of trade has installed a modern type of working machinery. This type has been developed through the experience of many years by the leading commercial organizations of America. It was developed to meet certain essentials of a successful organization, which are a representative membership, adequate working capital and a place for every member to work.

The foundation of the board of trade, of course, is the membership. From it come both service and money. In order to permit the membership to serve in activities that appeal to the individual, the members are permitted to ally themselves with certain divisions and bureaus. The divisions of the new board are the civic, commercial, industrial, transportation, agricultural and fine arts. In order that the council of the board may be at all times representative of and responsible to the entire membership, the divisions each year will nominate an equal number of representatives for the council, and the membership will be asked to elect three from each division. In this way the council will be made up of three members from the civic division, three from the commercial and so on.

We now come to the place where the work is done, that is the bureaus. For the purpose of administration the civic division will be divided into two bureaus, civic research and civic activities. The commercial bureau will be divided into the retail trade bureau, the wholesale trade bureau and a convention and publicity bureau. Each bureau will elect its own chairman and if the chairman is not a member of the council already, he will automatically become an ex-officio member, without a vote. There will be no standing committees in the bureaus, but they will appoint a special committee for each particular piece of work, which will be discharged when its report is made of the work completed. Through this method a large number of members of each bureau will be given work to do during the year.

Certain standing committees are needed for the board of trade work, and these are: An executive committee to act for the council, a finance committee (which explains itself) and legislative, house and membership committees. The chairman of each of these committees is a member of the council. The other members of the committee may or may not be from the council. The managing secretary and his assistants will be in charge of the work of the various bureaus under the direction, of course, of the council and the chairmen of the bureaus.

How it Works.

This is the administrative side of the new board of trade. A proposal or suggestion comes to the managing secretary and he refers it either to the council or direct to the bureau or standing committee according to its nature. The bureaus will have considerable latitude on matters affecting their own trade interests. For instance, the retail trade, the wholesale trade and the manufacturers will not be restricted in their activities unless they proposed to act contrary to the general policy of the entire organization. On matters of general or public policy the permission of the council would be required before action could be taken. Bureaus have the right to appeal to the members' forum or to the membership at large.

On the advisory side of the board of trade the membership is sub-divided. But the division is according to individual trade or professional units. These units meet once a year at the call of the president to elect three delegates to the members' forum. There will be 50 or more of these groups, which would give a membership of 150 at least. If any one of these groups desires to effect a permanent organization, it may do so. It will then become a recognized unit of the board of trade. It may meet whenever it chooses and work out its own trade problems. In fact, in a number of cities the permanent organization of these groups has been encouraged to better trade conditions and this has resulted in great benefit to groups.

This forum will meet, say twice a month, at a noon-day luncheon. It will elect its own chairman, who will be ex-officio a member of the council. Members of the board of trade who are not delegates to the forum may attend all meetings, but may not take part in its proceedings. This body is without administrative powers. It is an initiative body. Here the delegates from the 50 lines of business or professions will have an opportunity to make suggestions for the good of the city or board of trade. The managing secretary, who will be secretary of the forum, will take down all suggestions and refer them to the council or to the bureaus. The forum, however, has its own committee on programmes, arrangements and entertainments. The idea is to give as many members as possible a voice in the organization, and to bring to the front the men who are most interested in various phases of civic and commercial life.

Spend sparingly! Save sacrificingly! Be ready for Victory Loan.

North Marengo, $3,500, Kerr, Fleming and Company, Regina. Last Chance, $1,000; Philip Temple. Garden Valley, $1,800; Albert Olsen, Regina. New Imperial, $3,500; Huron and Erie Mortgage Company, Regina.

OUR army and navy are the protectors and the only protectors of *your* home—*your* family—*your* income—*your* property.

What will become of you and yours if these protectors are weakened and rendered insufficient to their task?

They will not be defeated by the enemy.

The only way they can be defeated or weakened is through *your* failure to support them with ships, food, weapons, ammunitions, clothing and supplies.

Your life, your business, the future of your family, may depend upon how much real effort and *sacrifice* you make to invest in

Victory Bonds

SOUTH VANCOUVER'S RECEIPTS

The officials of the South Vancouver municipality have made up the total receipts of the corporation for the past five months since Commissioner Gillespie has been in charge of the municipality's administration, and the receipts made up to September 23, show a total of $526,474. This amount is almost $100,000 more than the same period last year produced, as the receipts for that time were only $436,515. The 1917 revenue also included large arrears of taxes, amounting to approximately $42,000 more than was possible to secure from the same source this year, as with the improvement in financial conditions the arrears of taxes are gradually reduced.

The total assessment of Ottawa for 1919 is $114,627,313, as compared with $111,322,235 for 1918, an increase of $3,305,078.

At the regular meeting of the Markham township council the third reading of the by-law authorizing the expenditure of $10,000 to finance the introduction of Hydro-Electric power in the township as far as Unionville, was heard.

Alderman Jarvis, of Galt, has given notice that he would introduce a by-law to be submitted to the people to raise $15,000 for the purpose of securing and furnishing a home for the Galt Great War Veterans.

FIRE PREVENTION IN MANITOBA

Province Takes Measures to Assist in Reducing Canada's Fire Waste

The deputy fire commissioner of the province of Manitoba has issued the following statement with respect to fire control under the Fires Prevention Act of the province:—

It being ascertained that the annual fire waste in the province is very heavy, aggregating over $3 per head for the population, it is the aim of the government to have this serious waste reduced, and for this reason what might be termed a department of public safety has been organized that will care for the many different classes of work, all of which will be made to fit into a proper and systematic fire prevention and fire protection scheme for the public weal, with a deputy fire commissioner thoroughly versed in all branches of the fire service at its head.

This office will be staffed and equipped to operate as an advisory bureau for the public for the prevention of fires, and we would appreciate the co-operation of the press in letting it be known to the people of Manitoba that they may call on this department for advice and assistance.

Fire Prevention as a War-Time Measure.

Now is the time when patriotism should forbid every citizen from having a preventable fire; when every loyal citizen should realize that every fire and the resultant destruction of commodities helps the enemy and is a set back to our allies and to our own forces. If we cannot realize this responsibility in a matter of such national importance then we must be made to do so by law that shall fix personal responsibility for fires due to carelessness or neglect. That the application of such a law compelling individual responsibility for fires due to carelessness is necessary, Canada's fire loss record has proven beyond question:—

Fire losses in the 56 cities of Canada amounted to $6,842,476, or $2.74 per capita in 1912; $9,697,735 in 1913; $9,686,302, or $3.38 per capita in 1914; $6,964,092, or $2.49 per capita in 1915 and over $13,000,000 in 1916.

The average per capita loss in Canada for the period 1912-1915 amounted to $2.37. Comparative figures for foreign countries covering the same period are as follows: United States, $2.26; Spain, $1.81; South Africa, $1.77; Belgium, $1.03; Russia, 97 cents; France, 75 cents; England, 64 cents; Sweden, 43 cents; Austria, 32 cents; Germany, 29 cents; Switzerland, 13 cents. Comparison of the fire losses of various countries should be made with care for, although the per capita losses of various countries has a superficial value, it may be entirely unfair, as in comparing a poor country with a wealthy one. Caution is equally necessary in comparing the record of one city with another. A single fire in any one year may increase the per capita loss of a city to an extraordinary degree. For instance, the per capita loss in the city of Ottawa was increased from an average of $3.23 to over $6 in the year 1916 through the Parliament Building fire.

According to figures compiled by the Commission of Conservation fire loss in Canada during 1917 totalled $23,251,602. The number of fires reported numbered 14,092, but over $15,500,000 of damage resulted from 76 fires. Fatalities due to fires for the year number 189 apart from the Halifax disaster.

A report of this commission points out that the total loss by fire in the United Kingdom, apart from fires caused by the enemy, amounted from August, 1914, to December, 1916, to $41,000,295, and that during the same period losses in Canada, exclusive of forest fires, amounted to $52,027,000. *The Monetary Times* reports the fire losses for January in Canada at $2,68[illegible],556, an increase of $777,896, and at the same time the loss of life was 28. In Manitoba during February of this year seven lives were sacrificed to careless fires.

Winnipeg makes the highest contribution to the national fire tax, as shown by the report of the Citizens' Research League of Winnipeg, which gives Winnipeg's average fire loss at $3 per capita, which is [illegible]3 cents higher than that for Canada as a whole, and 75 cents greater than the average of some 200 United States cities. The record of Winnipeg's fire losses for the past five years, as shown from the fire chief's report, is as follows:—

1913	761	$8,650,473	$7,755,080	$627,985
1914	671	7,832,404	6,830,805	510,102
1915	515	[illegible],980,552	3,871,888	315,602
1916	441	6,101,272	4,656,998	740,861
1917	518	7,761,862	6,120,374	674,761

This enormous fire loss in Canada is to a large extent preventable by proper legislation compelling individual responsibility; by education of the children and the public generally, as to the use of fire; by strict fire marshal laws and rigid investigation where possible arson is suspected, and by severe prison sentence for arson, attempted arson, or with intent to defraud.

Incendiary Fires.

The following is a list of fires reported as mainly of incendiary, suspicious or unknown origin, that have happened in this province since the commencement of the war, and destroying property closely connected with the successful conduct of war activities: Exhibition building fire, Winnipeg, occupied as military barracks; thought to be an alien enemy act; April, 1915. City hospital fire, September, 1915; incendiary origin. Union stockyards fire, July, 1915; 40 head of cattle destroyed; cause unknown. Carberry grist mill fire, Carberry, Manitoba, February, 1916; burned to the ground; cause a mystery. Grain elevator at Reston, Manitoba; destroyed 15,000 bushels of grain; evidently of incendiary origin. Rice Malting Company, St. Boniface, April, 1916; total loss, $300,000; 300,000 bushels of wheat, barley and malt stored; incendiarism mooted, but fire commissioner's theory is that it was set by fishermen camping on river bank near the elevator. Frieson and Son, flour mill, Carman, Manitoba; fire, March, 1917; loss, $20,000; considerable stock of flour; Northern elevator fire, Winnipeg, March, 1917; capacity of elevator, 150,000 bushels of grain; loss, building $100,000, grain $100,000; incendiarism mooted, but the fire commissioner gave overheated journal as cause. Echo Milling Company elevator fire, Gladstone, Manitoba; loss, $150,000; April, 1917; held an unusual accumulation of grain and flour mill products to the value of $70,000 destroyed; cause said to be overheated journal. Saskatchewan Elevator Company, elevator fire at Benitor, Manitoba, May, 1917; burned to ground; cause unknown.

Food Products Destroyed.

In the three prairie provinces during the year 1917 there were destroyed by fire, at least 15 country elevators, representing a property loss of about $400,000, and an estimated loss of about 500,000 bushels of grain, principally wheat. In general there were burned two hospital elevators in Winnipeg and two flour mills. Including all fires in elevators, not far short of 750,000 bushels of grain was burned up or rendered unfit for human use in the year 1917 in western Canada.

Attention is also drawn to the fire loss in wholesale grocery warehouses since the year 1914. G. F. Galt Company, Limited (the Blue Ribbon Tea Company), manufacturers of teas, coffees, and spices, January 24, 1915; while the fire loss to the building was slight, there was an extremely heavy water loss to stock exceeding $125,000. Bright and Johnson warehouse, Winnipeg, almost totally destroyed. There was a considerable loss to the wholesale grocery stocks of the Jobin-Marrin Company of approximately $15,000 and W. L. McKenzie and Company, wholesale grocery sundries, $25,000. Scott-Bathgate building, January 29, 1914, there was a loss in this risk caused from fire originating in the wholesale grocery and commission merchants section and loss was suffered on grocery stocks. In February, 1917, this same building, both sections were completely gutted and stocks of wholesale groceries contained in same were a total loss.

It must be remembered that the record for grocery fire waste is not by any means completely covered by the record of fires in wholesale grocery warehouses. Unquestionably large quantities of this class of foodstuffs are destroyed in department stores and other stores and in warehouses handling miscellaneous merchandise which cannot be included under this specific heading.

Other fires that have occurred in the province under conditions that support the incendiary theory are as follows: River park pavilion fire, Winnipeg, October, 1915. Man arrested for the fire, declared insane. Banfield furniture warehouse fire, Winnipeg, October, 1914. Incendiary origin.

Three outbreaks in one day in the month of April, 1915, in the vicinity of Higgins Avenue, Winnipeg; suspected incendiarism. Brunkild, Manitoba, June, 1916, $10,000 loss; supposed incendiarism. December, 1916, two mysterious fires in factory district between Wall and Spruce Streets, Winnipeg, thought to be started by incendiarism. September, 1917, three stables set alight within a narrow radius in Winnipeg; incendiarism. This revelation should lead to increased vigil-

ance and condemn in no uncertain terms fires due to carelessness or neglect.

Corroborative testimony as to the accuracy of the statement so frequently made that a majority of the fires occurring annually in Canada are preventable is furnished by the experience of the two weeks when the fire brigade, crippled by a strike, owners and householders were forced to exercise unusual care to prevent outbreaks. The result is shown in the record of fires for the same period in 1917 when compared with the corresponding period this year: May 14, 1917, to May 25, 1917, number of calls for the fire department 127, compared with, say, 56 calls for the fire department during the period of the strike, May 14, 1918, to May 25, 1918.

The prohibition of the undesirable and dangerous methods of celebrating Victoria Day freed the city from a very real fire danger. During the celebration last year, 13 calls were turned in and several fires resulted, while the lack of opportunity to engage in the dangerous practice of setting off fireworks on Victoria Day this year brought an opposite result, no alarms for fire being received. This is a most remarkable example of how the people can reduce the fire waste if they use intelligent precaution in the use of fire and comply with fire prevention orders. It is not exaggerating to say that fully 75 per cent. of our fires are caused through gross carelessness and indifference.

Labor Union Influence in Fire Brigades.

Owing to the labor union influence the Winnipeg firemen so far this year lost sight of the well-known traditions of the fire service and their duty to the community as to leave their posts, only a remnant of the fire brigade remaining on duty to protect the city from fire destruction. For this desertion there can be nothing but condemnation, no matter how just be the principles underlying the inception of such a union within the ranks of the brigade.

The strike of the Winnipeg firemen, the recent strike of the Edmonton firemen, and the strike of the Vancouver firemen, goes to show there is a serious danger of the fire service throughout the country getting beyond control of municipal government; it is therefore a matter of national importance that a fire brigade's duties and responsibilities be clearly defined by statute, if they are to be relied upon for the protection of lives and property.

Surely there must be something wrong with the constitution and administration of our fire departments to cause the firemen of Canada to unionize with labor, with a resultant loss of status and lack of true discipline, a condition to my knowledge yet unknown in Great Britain, but common in America. What is the real cause underlying its inception in the ranks of the firemen? Is it due to their having to organize to force a betterment of the conditions under which they live and perform their allotted duties? If it is, then we must get a more logical form of organization and control, or the whole fire service of Canada will become demoralized.

Prevention of Fires and Fire Loss.

I think it is agreed that the prevention of fires must begin with the people. If fire prevention and loss prevention is not made compulsory by law, it must be voluntary, and the most available way to reach the people is by a comprehensive, cooperative inspection campaign, combined with an organized system of public instruction with regard to the dangers of fire and the prevention of fire waste, which should reach every man, woman and child in the province. I attribute one of the main reasons for this great waste, which must affect the economic resources of the nation, to the non-appreciation of the fact that property destroyed by fire is practically an absolute loss, which falls on the shoulders of everyone, and therefore becomes a national loss. The public must be educated to realize the extent of the criminally careless and unnecessary fire waste and the need of constant vigilance to prevent it.

This education can be commenced in the schools, and the lessons gained there carried to the homes. At this time of national stress this appeal for co-operative activity in the prevention of fires should be given earnest consideration, and it is the purpose of this office to provide inspection blanks for a continuous activity in fire prevention, making every day fire prevention day, in which every citizen, male or female, young or old, will be asked to co-operate, with the request that they report all dangerous conditions found in any building or locality, which in their judgment ought to be removed. It is also my intention to prepare blank forms for the furnishing of information, by owners or occupants of buildings throughout the province, of the condition of such buildings with regard to fire protection. The said blanks shall contain notice to such property owners or occupants of proper rules and regulations to minimize the danger of fire and to suppress fire waste, and shall contain certain questions requesting information of a definite character to show the condition of the buildings. These blanks shall be furnished to officers, whose duty it is to receipt for taxes on real property in every part of the province, to be given by them to property owners, together with their tax bills (two forms for each property), with requirements that one properly filled in will be forwarded to the fire commissioner's office at once for checking and filing among the records of my office, and that the other be forwarded six months thereafter.

Co-operation in Fire Investigation.

To attain the maximum efficiency in the investigation of fires, the aid of the fire departments and the police authorities will be enlisted. These officials will be asked to hold formal inquiries on the spot, or as "Canadian Finance" aptly expressed it—"a search while the fire is hot" will be made. Means will be devised by this office that will make for systematic co-operation along these lines.

Winnipeg Fire Brigade.

During the past six years as Winnipeg inspector for the Western Canada Fire Underwriters' Association, I investigated and reported on every serious fire in Winnipeg. Quite recently the Winnipeg fire department has been in the limelight of public criticism, and if, a day or so ago, while still an official of the fire underwriters, I had been asked my opinion of the standard of efficiency maintained in this fire brigade, my answer would have been derogatory to their reputation as firemen, and to their policy of fire prevention.

To-day, I take up the duties of deputy fire commissioner for this province, with the idea of accomplishing reforms in fire matters by a constructive policy rather than by a destructive one, and by an appeal to those responsible for the protection of life and property from fire and the effects of fire, to see to it that the fire departments are brought up to the highest standard of efficiency and usefulness.

Regarding this phase of fire protection and loss prevention, it is my intention to issue report blanks to each fire chief in Manitoba, to be used by them in reporting to this office fires that occur in their territory. Many large fire losses are due to the inefficiency of fire departments operations, and it is believed that such a systematic check of the fire protection of the cities, towns and municipalities in this province will result in bringing the fire departments up to a reasonable point of efficiency. It is to be hoped that the need for destructive criticism may not arise.

War is a frightful thing, but it may prove of inestimable benefit to you if it teaches you the good habit of thrift.

Buy Victory Bonds

If the war ended next month how many people would enter the new and difficult peace era with considerable savings from the present inflation of values? Too many householders, as we are well aware, have found advancing costs cutting down their margin for savings. Some have found their increased earnings quite inadequate to meet their heavier outlay. But there are plenty of others who are earning—and spending—larger sums of money than ever before. They fail to realize that the time of plenty and ease is a time to husband resources for the inevitable reaction.

BOOK DEPARTMENT

MONETARY TIMES OF CANADA

62 Church Street, TORONTO

MONTREAL WINNIPEG

PUBLICATIONS RECEIVED

The Mining Industry in Northern Ontario.—This is a report by Arthur A. Cole, mining engineer of the Temiskaming and Northern Ontario Railway, and describes recent developments in mining in those parts of Northern Ontario reached by the Temiskaming & Northern Ontario Railway.

The Income War Tax Act of 1917, including 1918 Amendments.—This is a booklet published by the Crown Trust Company of Montreal. It gives in tabular form the income payable upon a graduated scale of incomes as now fixed by the changes of this year. The booklet also gives a summary of the law upon the question and quotes in income tax act itself.

Building and Ornamental Stones of Canada.—Volume 5. This report has been issued by the Dominion Department of Mines, and is prepared by William A. Parks. The first four volumes describe Canada's resources in building stone as located in Ontario, the maritime provinces, Quebec and the prairie provinces. The fifth volume describes the deposits in British Columbia, is amply illustrated, and also contains useful maps and statistics.

Labor Legislation in Canada for the Year 1917.—Issued by the Department of Labor, Ottawa. Only two acts were passed by the Dominion government pertaining to this field, the one affecting Chinese immigration and the other the wages of railway employees. There was, however, quite a large volume of provincial legislation in the different provinces, and the report is an excellent work of reference for matters of this kind.

Round Table for September, 1918.—In the Canadian section of this number there are articles on "Canada and the Imperial Problem," "Military Service and the Farmer," "Further Notes on Titles," and the "Women's Movement in Canada." The Canadian representative of the society, which is organized for the purpose of furthering the unity of the empire, is Mr. A. J. Glazebrook, 8 Wellington Street East, Toronto. Published by Macmillan & Company, London, at 2s. 6d.

New York Insurance Report for the Year ended 31st December, 1917.—This report is issued in three volumes dealing respectively with fire companies, life companies, and casualty, credit, and title companies. The New York State Insurance Department was one of the earliest to commence operations, the present report being the 59th issued by it. Their records are, therefore, of peculiar value, and the statistical tables given in the reports are thoroughly comprehensive.

Insurance Report of the State of Maine for the Year Ended 31st December, 1916.—This report gives statements of the companies doing business in Maine in the usual form together with a comprehensive summary of all insurance in the state. The total fire premiums received during the year were almost $5,000,000, and the losses were about 45 per cent. of the premiums. An excellent feature of the report is the statement of the receipts and expenditures of the department, which is given at the front of the volume.

Government Financing.—By I. G. Jennings, assistant secretary, Metropolitan Trust Company, N.Y. This booklet is divided into four parts. The first gives a review of the methods used in financing the wars in which the United States was engaged up to the present, and also an account of how the war is being financed in the other belligerent countries of importance. Part two discusses some of the main points to be considered in financing of this kind. Part three describes the present law of the United States, and the fourth section is devoted to a discussion of the system now in force.

Hearings before the Committee on Ways and Means of the House of Representatives. From June 7th to July 17th and on August 5th, 14th and 15th of this year the committee on ways and means of the house of representatives in Washington received evidence from a large number of sources to guide it in the imposition of the new taxes which were required by the United States government. These hearings are reported in full in three volumes which have been issued from the government printing office at Washington, and constitute one of the best works issued on the subject of national finance. The first volume deals with income, excess profits and estate taxes, the second volume with miscellaneous taxes, and the third volume with postal rates.

The Glass Industry in the United States. Report No. 5 of the Tariff Information Series, issued by the United States Tariff Commission. This report goes very fully into the glass industry and deals particularly with the changes effected in it through the war. The new branches of the industry are described and suggestions also made as to how export and domestic trade can be held after the war. Opinions of leading manufacturers are quoted. Valuable statistics are also given of the business. In 1913, prior to the war, Germany exported by far the largest quantity of glass and glass products. Belgium was second, Austria-Hungary third, France fourth, Netherlands fifth, and the United Kingdom sixth. In preparing the report the Commission had the assistance of Mr. Frank J. Sheridan, a special expert on the subject.

Canadian Annual Review for 1917.—This work has been issued annually since 1901. The author, Mr. J. Castell Hopkins, states that during these years every page and every line of each volume has been written by his own hand. The 1917 volume contains over 900 pages and is a review of events in Canada for the year. A full account is given of the formation of the Union Government and other political events. There is a special chapter upon the British Empire; also sections devoted to the different provinces of Canada. As a supplement some of the leading statements made during the year are printed, such as the presidential addresses at the annual meetings of some of our leading financial institutions. A list is also given of books published during the year on Canadian topics. Published by the Canadian Annual Review, Ltd., Toronto, at $5.

Stabilizing the Dollar.—By Irving Fisher, Professor of Economy, Yale University. Professor Fisher is known throughout the world as a close student of monetary questions, and has written a number of works upon the subject. This booklet gives in brief form an outline of a method by which he proposes to remedy the fluctuations in the purchasing power of the dollar which have been felt so acutely during the past few years. Professor Fisher proposes a circulation medium consisting of certificates payable in gold upon demand. The amount of gold for which they are exchangeable, however, should, he says, be varied, from time to time, in accordance with the fluctuations in the official index number of prices. In this way the dollar would have a constant real value instead of a variable one as is at present the case. His plan has been endorsed by a large number of men who have studied the question carefully.

Report on Canned Foods.—Issued by the United States Federal Trade Commission. This report is the result of an investigation made by the Federal Trade Commission at the request of President Wilson. It was made under the immediate supervision of Mr. L. H. Haney, assistant chief economist by Mr. K. Simpson and assistants. In the report it is pointed out that the industry is one made up of small establishments and that the expansion of the size of the business unit and the extension of the kinds of products manufactured have not lead to important economies. In fact, it is the smaller establishments which have shown the best profits. There has been considerable increases in the profits during the past two or three years. The average net profit on investment was 9 per cent. in 1916 and 32 per cent. in 1917. The report is based on an examination of companies which produce about 25 per cent. of the total canned vegetables and fruits manufactured in the Untied States.

Labor Legislation in Canada.—The Department of Labor at Ottawa has for some time past been preparing a summary of the labor legislation of the Dominion of Canada, and of the different provinces, as at the 31st December; 1915. This work has now been completed and has been published in a volume of 740 pages. In the case of the legislation for the Dominion the revised statutes of 1906 are quoted, followed by the acts passed since that time relative to labor. The volume is well indexed and forms a useful work of reference. It is supplemented by annual reports covering legislation for successive years. The annual report for 1916 appeared in 1917, and the report for the year 1917 was published a few weeks ago. Each of these reports has a cumulative index so that the work as a whole is useful for reference purposes. It is intended, however, that at intervals of several years, the complete summary of labor legislation in Canada will be revised and reissued in the form of a single volume.

ANNUAL REPORT
OF THE DIRECTORS OF
COCKSHUTT PLOW COMPANY, LIMITED
YEAR ENDING JUNE 30th, 1918

To the Shareholders:

Your Directors are pleased to be able to report an improvement in the Company's business for the year under review.

The business done in Canada increased in volume over that of the preceding year, and might have been increased still further if difficulties of obtaining labor and material, arising out of war conditions, had not limited your Company's output. Owing to the better financial position of the farming community, **a much larger proportion of the business was done on a cash basis** This condition continues, and your Company is desirous of encouraging it, as the system of long credits is not economical for the farmer and is very burdensome to the manufacturer.

The same financial improvement was reflected in **increased collections** in respect of sales made in former years.

The **volume of foreign business** reached a higher point than ever before in the Company's history.

The net profit, after allowing for depreciation and for write-offs which your Directors considered necessary, amounted to $553,214.94.

Your Directors have not considered it advisable, in view of the indebtedness of the Company and the uncertainty of the general financial situation and outlook under war conditions, to pay the full dividend on the preference shares, but have continued through the year to declare quarterly dividends of 1 per cent. This absorbs $258,600.00 out of the net profits for the year. Subject to your approval, they recommend that $200,000.00 of the balance be added to contingent reserve, and that the remainder of the net profit, after providing for war tax, be carried forward to the profit and loss account.

They also recommend that $500,000.00 be transferred from the Profit and Loss Account to Capital Reserve, thus bringing it up to $1,500,000.00.

The outlook for the present year is excellent, and a steady and satisfactory business is anticipated.

The thanks of the Company are due to the Management and Staff for efficient and loyal service rendered throughout the year.

All of which is respectfully submitted.

H. COCKSHUTT, President.

Brantford, September 27th, 1918.

To The Shareholders,
COCKSHUTT PLOW COMPANY, LIMITED.

We have examined the foregoing Balance Sheet as at 30th June, 1918, and the accompanying Profit and Loss Account for the year ended at that date, with the books of the Company and the certified Accounts and Returns from the Company's Branches, and we have obtained all the information and explanations we have required. In our opinion, the above Balance Sheet and the Profit and Loss Account are properly drawn up so as to show a true and correct view of the state of the Company's affairs as at 30th June, 1918, and the results of the Company's operations for the year ended at that date, according to the best of our information and the explanations given to us and as shown by the books of the Company and the Accounts and Returns from the Company's Branches.

This Modern Factory For Sale

SITUATED at Port Arthur. There are 20 acres in the site. The Canadian Pacific and Canadian Northern Railways are accessible to the property. There is an abundance of Hydro-Electric power available at low rates. Buildings consist of main building, smith shop, power house (including boilers, engine, switchboard, etc.) and storage building. All the machinery is in excellent condition. Lay out and equipment is especially suitable for woodworking or similar plant. Will sell 10 acres and buildings if desired. The fullest possible information regarding the property will be furnished upon application to

G. R. DUNCAN & Co., FORT WILLIAM, ONTARIO

Engineers and Specialists in Industrial Properties

LONDON AND LAKE ERIE TRACTION

The London and Lake Erie Traction Company, after a year of uncertainty, will be scrapped, according to announcement made on the 7th inst., by General Manager Warburton. The company's decision is to tear up the road and sell it piecemeal as scrap. Sudden action was concluded to be essential in view of the imminence of peace, and the possibility of a fall in the metal market, coupled with the scant hope of the municipalities buying the company out as a going concern.

A prolonged conference was held at the public utilities commission building on the 7th inst., between representatives of the village of Lambeth, the Township of Westminster, Mayor Somerville, of London, and Sir Adam Beck.

Dr. Routledge, of Lambeth, announced that he had interviewed G. B. Woods, of Toronto, president of the company, which had first asked $410,000. Mr. Woods had indicated that $150,000 was his price, but the Doctor reported that he thought $125,000 would buy it. There was little hope of securing the financial co-operation of St. Thomas or other municipalities further south. Sir Adam Beck reported last May that the road, coupled with the London and Port Stanley Railroad, could be made to earn $16,000 surplus over operating costs. This would meet interest and sinking fund charges on $210,000 borrowed at 6 per cent., or $241,000 borrowed at 5 per cent. Now, however, he announced that costs have risen in the meanwhile to an extent that would add $[illegible] to operating charges. As a result, purchase, which was previously looked upon as a doubtful bargain, was out of the question. Sir Adam suggested as an alternative that Lambeth, London and other municipalities concerned purchase the eight or ten miles with which they are directly concerned, and connect it with London Street Railway, handing it over to the latter company to operate, pending expiration of the street railway franchise, which will revert to the people of London in 1925. A committee was appointed to take the question up with all concerned, but in the meanwhile the Traction Company announced its determination to end business. It is claimed that the rails, which have been used for a number of years, can be sold for twice what they cost. The widespread use of automobiles by the farmers, and the electrification of the paralleling London and Port Stanley Railway are blamed for the loss of the road.

WAGE INCREASES ON CANADIAN ROADS

Seventy-five thousand stenographers, clerks, office boys, messengers, watchmen, section men and others in the employ of the Canadian railways were granted an increase in wages amounting to more than 22 million dollars a year on the present pay-roll, at a meeting of the Canadian Railway War Board. At the same time, in view of the demands of organized labor, it was ordered that hereafter the eight-hour day shall prevail in all Canadian railway freight sheds. Instead of opening at 7 a.m. and remaining open until 5.30 and 6 o'clock, the sheds will now open at 7.30 o'clock and close at 5 o'clock for five days in the weeks, while on Saturday the closing hour shall be 1 o'clock. This goes into effect October 15.

The meeting at which the two important decisions were reached began at 2.30 in the offices of the Canadian Railway War Board, which by 5 o'clock had made its decision. Following the lines of supplement 7 to general order 27 of the United States Railway Administration, which the Canadian Railway War Board undertook to adopt in Canada on July 15 last, an increase of $25 per month will be given every employee in the classes referred to. Some of these increases will date from September 1 and some from October 1. This is in lieu of the former somewhat complex scale of increases provided by the McAdoo scheme. Instead of adding a percentage to the wage paid for a certain kind of work on December 31, 1915, the lump sum referred to will be added to the wage paid on January 1 of this year. Slight questions as to the interpretation of the wording of the McAdoo award in this respect still remain to be settled.

Victory Loan bonds are a nation's pledge.

VICTORIA TAX RATE JUMPS

Victoria's new tax rate has been set at 27.77 mills on the dollar, as against 21.50 for last year. The by-law authorizing the increase was passed by the council on September 26th, but has been found invalid on a technicality. Legally, a tax rate by-law can only be passed upon the return of a completed assessment roll, and the assessment commission has not yet finished its valuation.

In a letter addressed to the city council, City Solicitor R. W. Hannington referred to the passage of the by-law as "wholly illegal and void." Consequently, the bill will have to be rescinded and passed at a later session, but the contents will remain the same. The tax rate has been definitely fixed at 27.77 mills.

For the general purposes of the municipality for the current year, 8.35 mills on the dollar will be raised and collected upon all taxable land on the assessment roll. For payment of interest and principal of the general debt 11.55 mills is to be raised, and for the payment of interest and principal of the school debt, 2.33 mills. A special rate of .88 of one mill on the dollar has been fixed for board of health and hospital purposes, and there is a further levy of 4.66 mills on the dollar for school purposes.

All improvements shown on the assessment roll are to be exempted from taxation during the year 1918. The new rates and taxes will be payable to the city on October 31, and all persons who pay on or before December 10 of this year will be entitled to a discount of one-tenth of the amount imposed. The rates and taxes on land which are unpaid on December 31 will bear interest until paid in full at the rate of 8 per cent. per year.

Vanderhoof, Scott Company, of Toronto, publishers of "Canada Weekly," formerly "Canada Monthly," have assigned. The "Canada Weekly" was established in 1906, and was published in London, Ontario. In December, however, it was decided to issue it as a weekly and the head office was moved to Toronto.

DIVIDENDS AND NOTICES

THE CONSUMERS' GAS COMPANY OF TORONTO

NOTICE OF ANNUAL MEETING

The Annual general meeting of the Shareholders of the Consumers' Gas Company of Toronto, to receive the report of the Directors, and for the election of the Directors for the ensuing year, will be held in the Company's Board Room, 17 Toronto Street, Monday, the 28th day of October, 1918, at 12 o'clock noon.

ARTHUR HEWITT,
General Manager.

CROP MOVEMENT IN SEPTEMBER

More than 8,250 cars of 1918 wheat have arrived in Winnipeg since the beginning of the crop year, September 1, according to figures issued by Canadian Northern freight officials on October 3rd. Of other grains, nearly 1,100 cars have arrived.

The greatest movement of wheat during the month was over the Canadian Pacific Railway, being 4 001 cars, the Canadian Northern Railway moved 3,521 cars and the Grand Trunk 748.

As compared with September, 1917, the movement is materially smaller. Last year, 8,877 cars, including wheat and coarse grains, came into Winnipeg over the Canadian Pacific Railway during September; this year the total is 4,451. For the same month of last year the Canadian Northern Railway moved 6,591 cars, and this year 4,091. The Grand Trunk, in September, 1917, moved 1,879 cars, and in September, 1918, 788.

While these shipments are from Saskatchewan and Manitoba, it may be said that the latter province is supplying the major portion of wheat consigned for the east. There is no movement from Alberta as that province has been embargoed by the board of grain supervisors in order that sufficient seed may be released for home use.

ASSOCIATED BOARDS OF TRADE

The boards of trade of a number of towns and cities in Western Ontario, have formed an association for mutual assistance. A meeting was held on October 4th in Galt and the following officers were elected: President, J. H. Hancock, Galt; vice-president, J. S. Martin, Port Dover; secretary, G M. Debus, Kitchener.

The objects of the boards, as set forth by resolution, are: (1) Port Dover harbor improvement; (2) the development of other Lake Erie ports; (3) improved lake and railway facilities, both steam and electric; (4) construction of provincial county roads, connecting the chief centres of population; (5) better railway postal services, by the utilization of the existing means of transportation; (6) Grand River improvement and development for purposes of navigation, power, flood prevention and scenic beauty; (7) technical education; (8) pure gas, and plenty of it.

It was also decided that a copy of the resolution be forwarded to the boards of trade in Grand River valley, from Waterloo, Kitchener, Elmira, Preston, etc., to Port Dover and Dunnville, and to those of Stratford, Woodstock, Norwich and Hamilton, with a request for their views on the proposal.

Messrs. McGillivary, of Preston, Alderman Russell Kelly, of Hamilton, John Harold, M.P., and John Bain, were the principal speakers, all supporting the idea with enthusiasm.

The "Daily Chronicle," of London, England, has been purchased by Sir Henry Dalziel, who is already owner of a large number of papers there, including the "Pall Mall Gazette," the "Era," the "Country World," "Reynolds' Newspapers, and the Sunday Evening Telegram."

Satisfactory Annual Report

Lake of the Woods Milling Company

Builds up Substantial Surplus

Montreal, October 3rd.

At the Annual Meeting of the Lake of the Woods Milling Company held here Wednesday, October 2nd, the chair was taken by Mr. W. W. Hutchison, the Vice-President of the Company, owing to the absence overseas of President Frank Meighen.

A satisfactory report was presented to the shareholders, and a reasonably optimistic view was taken of the coming year's operations. Mr. Hutchison stated that the west "was now harvesting a fair average crop of good quality," and that "all mills were now running at full capacity," and that "we can look forward with confidence to a fair year's business."

For the year ended August 31st, 1918, the Company's revenue totalled $857,914, made up as follows:—Milling Profits, $601,000. Profits from the sale of commodities other than Flour and Feed, $169,000. Dividend from the Subsidiary Company (Sunset Manufacturing Company), $87,000. This has been apportioned as follows:—

Interest on the Company's bonds for the year	$ 54,000
Dividend of 7% on $1,500,000 Preferred Stock	105,000
Regular dividend of 8% on the $2,100,000 Common Stock	168,000
Additional dividend of 4% on the Common Stock (from Sunset Mfg. Co., Limited)	84,000
Written off Property, and Goodwill, and Trade Marks Account	100,000
	$511,000

This leaves a balance of $346,914 which is carried to surplus account. The Directors also set aside a further sum of $200,000 to be applied to the Bond Redemption account, and after making this provision and adding the surplus profit brought forward for the year the surplus account now stands at $978,797.

The Directors have increased the regular dividend of 8% to 10% and in addition the satisfactory progress made by the Sunset Manufacturing Company (a subsidiary Corporation), enables them to add an additional 2% for the year ending August 31st, 1918, from this source thereby placing the common stock on a 12% basis.

COBALT ORE SHIPMENTS

The following is a statement of shipments of ore from Cobalt Station, in pounds, for the week ended October 4, 1918:—

Peterson Lake, 60,000; O'Brien, 64,010; Penn-Canadian, 66,000; National, 76,212; Mining Corporation, 129,389; McKinley Darragh, 211,600; Buffalo, 176,000; Nipissing, 129,502; total, 912,802.

The total shipments since January 1st, now amount to 22,867,425 pounds, or 11,433.7 tons.

RAILROAD EARNINGS

The following are the earnings of Canada's transcontinental railways for the month of September:—

Canadian Pacific Railway.

	1917.	1918.	Inc. or dec.
Sept 7	$2,666,000	$3,053,000	+ $387,000
Sept 14	2,691,000	2,915,000	+ 224,000
Sept 21	2,964,000	3,114,000	+ 150,000
Sept 30	3,631,000	4,210,000	+ 579,000

Grand Trunk Railway.

Sept 7	$ 992,613	$1,346,536	+ $353,923
Sept 14	977,154	1,415,000	+ 437,846
Sept 21	1,037,721	1,458,812	+ 421,091
Sept 30	1,455,133	2,126,177	+ 671,044

Canadian Northern Railway.

Sept 7	$ 715,800	$ 901,000	+ $185,200
Sept 14	751,300	873,900	+ 122,600
Sept 21	770,200	916,100	+ 145,900
Sept 30	1,104,400	1,359,000	+ 255,500

SHIPBUILDING ON VANCOUVER ISLAND

Mr. J. C. McIntosh, M.P. for Nanaimo, upon his recent return to Victoria, confirmed the report that the Federal government is to embark on a steel shipbuilding programme on Vancouver Island. The site of the yard, he said, will be somewhere in the Nanaimo district, and the machinery is to be assembled in Victoria. The undertaking will mean the expenditure of over $15,000,000.

GUARANTY TRUST COMPANY OF NEW YORK

Among the great financial institutions which have been built up in the growth of the United States, must be numbered the Guaranty Trust Company of New York, which, on September 10th, 1918, had assets totalling $757,359,703. This company, of course, in addition to performing the functions of a trustee, also does much business which can, in Canada, only be performed through the agency of a chartered bank. The principal item in its statement of liabilities is the total of $502,541,355 of deposits. It has almost $350,000,000 of loans and bills purchased. Its holdings of public securities amounts to nearly $100,000,000, not counting over $80,000,000 of United States government bonds and certificates.

The company has been particularly active in promoting its business abroad. It maintains offices in London, England, and in Paris, as well as agencies in many other parts of the world. Among its other activities it has issued a number of booklets, containing authoritative studies of finance in foreign countries.

Manufacturers looking for a ready-built factory strategically located, served well with transportation and within reach of abundant cheap power, will be interested in the announcement on page 34 of this issue.

ONTARIO VICTORY LOAN ORGANIZATION

Memberships of Various Committees Announced by Provincial Executive

The following are the committees appointed for the organization of the Victory Loan campaign in Ontario:—

ONTARIO GENERAL COMMITTEE.

G. H. Wood, chairman; F. J. Coombs, vice-chairman; G. Tower Fergusson, vice-chairman; W. A. MacKenzie, vice-chairman; W. L. McKinnon, secretary; A. H. C. Beairsto, assistant secretary; Harry L. Stark, treasurer; W. C. Brent, divisional organizer; C. H. Burgess, divisional organizer; Gordon T. Finch, divisional organizer; C. E. A. Goldman, divisional organizer; A. M. Macrae, divisional organizer; D. J. McDougald, divisional organizer; J. W. Mitchell, divisional organizer; E. B. Thompson, divisional organizer; F. J. Coombs, chairman publicity committee; G. Tower Fergusson, chairman finance committee; C. W. Fleming, chairman business committee; Æmilius Jarvis, chairman employees' committee; W. A. MacKenzie, chairman organization committee; F. M. Chapman, Will. A. Dryden, M. O. Hammond, R. H. Halbert, Robert Hobson, J. B. Laidlaw, A. D. Langmuir, Col. R. W. Leonard, J. B. McKechnie, Thomas Moore, S. R. Parsons, T. A. Stevenson, John A. Tory.

BUSINESS COMMITTEE.

C. W. Fleming, chairman; G. Tower Fergusson, H. A. Green, A. G. Mackenzie, H. L. Somers, Harry L. Stark, G. H. Wood.

EMPLOYEES' COMMITTEE.

Æmilius Jarvis, chairman; J. E. L. Pangman, secretary; Major L. L. Anthes, Gordon T. Finch, John Firstbrook, E. B. LeRoy, H. MacDonald, W. A. MacKenzie, S. R. Parsons, R. R. Rogers, Major C. A. Williams, G. H. Wood.

FINANCE COMMITTEE

G. Tower Fergusson, chairman; Harry L. Stark, treasurer; C. W. Fleming, E. G. Wills, G. H. Wood.

ORGANIZATION COMMITTEE.

W. A. MacKenzie, chairman; W. L. McKinnon, secretary; A. H. C. Beairsto, assistant secretary; W. C. Brent, C. H. Burgess, Gordon T. Finch, C. E. A. Goldman, A. M. Macrae, D. J. McDougald, J. W. Mitchell, E. B. Thompson, G. H. Wood.

PUBLICITY COMMITTEE.

F. J. Coombs, chairman; C. P. Fell, secretary; Dr. A. H. Abbott, W. C. Brent, J. J. Gibbons, F. R. Graham, M. O. Hammond, W. N. McIlwraith, W. L. McKinnon, D. H. Pettes, MacKenzie Williams, G. H. Wood.

TORONTO DIVISION.

Sir Edmund Osler, honorary chairman; Sir John Eaton, honorary vice-chairman; J. W. Mitchell, chairman; H. R. Tudhope, vice-chairman; H. M. Peacock, secretary; D. H. Pettes, executive secretary.

OTTAWA VALLEY DIVISION.

D. J. McDougald, divisional organizer

City of Ottawa.—Sir Henry Egan, honorary chairman; J. F. Orde, chairman; J. E. MacPherson, vice-chairman; J. D. McTaggart, organizer; J. R. Mitchell, organizer; F. W. Fee, secretary.

Carleton.—F. A. Heney, chairman; J. E. Caldwell, vice-chairman; H. C. Monk, organizer; A. H. Sutherland, secretary

Renfrew.—Senator M. J. O'Brien, chairman; E. A. Dunlop, M.P.P., vice-chairman; T. A. Richardson, organizer; J. R. Lockhart, secretary

Russell.—Norman F. Wilson, chairman; Damasse Racine, M.P.P., vice-chairman; L. R. Cooper, organizer; J. N. Legros, secretary.

Prescott.—J. G. Higginson, chairman; Felix Cadieux, chairman; F. J. Phelan, organizer; Geo. L. Allen, secretary.

Dundas, Stormont and Glengarry.—Judge O'Reilly, chairman; O. D. Casselman, vice-chairman; N. J. Fraid, vice-chairman; Hugh Munro, vice-chairman; F. D. Gates, organizer; J. G. Singer, organizer; F. D. MacLennan, secretary.

Lanark.—Judge J. H. Scott, chairman; B. A. Caldwell, vice-chairman; A. Dymond, organizer; Jas. J. Hands, secretary.

EASTERN DIVISION.

E. B. Thompson, divisional organizer.

Leeds and Grenville.—Judge J. K. Dowsley, chairman; A. C. Hardy, vice-chairman; C. S. Cossitt, organizer; J. O. Grills, organizer; H. B. White, secretary.

Frontenac.—J. M. Hughes, chairman; Francis King, vice-chairman; G. R. Warburton, organizer; W. W. Sands, secretary.

Lennox and Addington.—W. A. Grange, chairman; Herbert Daly, vice-chairman; S. L. McGinnis, organizer; C. H. Lapum, secretary.

North American Life Assurance Company
"SOLID AS THE CONTINENT"
HEAD OFFICE - TORONTO

"I Wish I Had Taken Twice As Much!"

Nothing is more often repeated in letters received at our office than the expression "I wish I had taken twice as much insurance while I was about it." When endowments, dividends or cash settlements are paid, the assured very often acknowledges the remittance with that remark The truth is very few men take as much Life Insurance as they can reasonably carry—and repentance often comes when additional Insurance is not procurable. Probably every reader of this paper believes in Life Insurance and carries more or less of it but one should ask himself the question, **Am I Carrying as Much Insurance as I Can Afford?** If the policyholders who are now entering the Company could read the evidence of gratified policyholders and beneficiaries, they would make a great effort to increase the amount applied for—and existing policy holders would double the amount of their protection. "One word more":— What income would your present insurance yield the beneficiary at say 6%?

The Mutual Life Assurance Co. of Canada

NEW YORK AND ONTARIO POWER PROJECT

Application for Additional Rights is Considered by International Joint Commission

Following the granting of additional power rights on the St. Lawrence at the Long Sault Rapids to the St. Lawrence Power Company, another effort is being made by private interests to secure rights to develop more power. The New York and Ontario Power Company, in which both United States and Canadian capital is interested, has an application before the International Joint Commission for the right to develop additional power from the rapids plants in connection with the Waddington, N.Y., plant. The company seeks the right to increase the flow of water through to the dam now constructed on the American side of the river by 30,000 cubic feet per second, thus enabling the development of approximately 30,000 more horse-power. The company now has power rights of 100,000 horse-power.

It is maintained by the Canadian government engineers that the diversion of water through the dam will seriously affect the flow of the main channel, lowering the level by about 18 inches.

Hearing on the case was continued before the International Joint Commission at Ottawa on October 1st. Proceedings before the commission were opened in Atlantic City.

The company's project involves two structures on Canadian territory. Its present works are situated on Little River, between Ogden Island and the south shore, and south of the international boundary line. The new plans include the construction of an embankment from the east end of Ogden Island to Canada Island, crossing the boundary line. They include also a proposed fill from near the western end of Ogden Island north to the Canadian side. This fill, it is claimed by the company, will leave a depth at the lowest stage of water of 20 feet.

Get Government's Consent First.

At the opening of the proceedings, Mr. Migneault intimated that it would be necessary to secure the consent of the Dominion government before proceeding with any work on the Canadian side.

Mr. Van Kennen, counsel for the company, replied that in the United States the secretary for war took the position that it would be necessary for the International Joint Commission to pass on the application first.

Mr. F. H. Keefer, representing the Dominion government: "We have the cart before the horse. The order should be for an approval of the plans first by the minister of public works in Canada, so far as the Dominion is concerned. Then ask for the authority of the commission."

Judge Koonce, for the United States government, added that approval of the commission did not necessarily carry with it authority to put anything in the river on the American side except with the permission of the United States.

Claims Benefit to Navigation.

Mr. Van Kennen then outlined the company's scheme. The improvements, he claimed, would increase the capacity of the company's plant on Little River and would at the same time be a benefit to navigation. When the embankment was proposed, he said, there was a strong side draught in the north channel, which had proved the graveyard of many boats. The embankment would remove this danger.

Questioned by Mr. Keefer, counsel for the Dominion government, Mr. Lee, engineer for the company, described compensating works which the company proposed to construct. In regard to Lock 24 on the Morrisburg Canal, compensation could be provided to allow 14½ feet of water on the lock sill or even more if the company were allowed to fill the river up to the necessary extent. The company, he went on, would need 10,000 cubic feet of water per second, or a maximum of 14,000 C.F.S. over the flow.

Total Cost Put at $2,639,000.

Mr. B. B. Tucker, resident engineer of the New York and Ontario Power Company, told the commission that the proposed development work would include a dam approximately 1,100 feet long, 100 feet wide at the bottom and 50 feet at the top. In addition, there would be a superstructure for generators. He estimated the total cost of the project, based on 1917 prices, at $2,639,000. Mr. Tucker said that no estimate had been made of the cost on the basis of 1918 prices, but counsel for the company stated that there was little prospect of the work being constructed until after the close of the war, more particularly in view of the fact that there is at Washington an official of the government who fixes the amount that may be spent on industrial enterprises of this kind.

The Dominion government is opposing the company's application on the grounds that: (1) It will interfere with the full and economic development of the St. Lawrence system as regards the navigation thereof and the power potentialities therein, which are common to both bordering countries and of equal advantage to each country. (2) It will interfere with the complete regulation, by a dam at Canada Island, of the level and outflow of Lake Ontario. (3) The future development of the river will necessitate the acquisition of any rights the applicant may have in the river, and the government of Canada considers it inadvisable to create more. (4) The St. Lawrence River has enormous potentialities that should be developed in the most efficient and economical manner for future generations. Such a piecemeal policy as proposed is not in conformity with this doctrine.

The Dominion government claims also that original grantees' rights from the applicants' claim title have lapsed, and that the applicants, as successors, are now asking something entirely different from the privileges granted by the original acts of the legislature of New York.

Further evidence, mostly of a technical nature, was received on October 2nd. The sitting on the 3rd inst. was devoted to hearing the arguments of the company's counsel, and of the counsel for the Dominion government.

Given Rights in 1808.

Mr. Van Kennen, counsel for the company, reviewed the grants under which the original grantees secured their title. He said that the applicant company has voted rights to the natural flow of Little River based upon legislation passed by New York State as long ago as 1808. He maintained that the natural flow of this stream is approximately one-tenth that of the St. Lawrence River, and that except during low water periods there would really be no diversion of water in excess of what the company is entitled to by law.

Incidentally, counsel for the applicant company declared the power development at Niagara Falls, particularly on the American side, to be the most wasteful on the continent. On the Canadian side conditions were better, and when the proposed works at Chippawa are completed there will be developed a head of 305 feet as against 160 feet on the American side. He predicted that the time would come when the development works on the American side would all be scrapped and a less wasteful scheme adopted. Referring again to the plans of the company, Mr. Van Kennen said that the applicant would have no objection to regulation of the amount of water to be drawn from the St. Lawrence during low-water periods, and predicted that regulation would be necessary only at very rare intervals.

Division at Washington.

Commissioner Migneault having suggested that the company should have gone to the United States and Canadian governments before asking the commission to deal with this matter, Judge Koonce, the representative of the United States government, made a brief statement. He said that the Washington authorities had advised the company to go before the commission, and expressed the opinion that the facts being adduced would prove of assistance to both governments in finally dealing with this matter. He explained that, owing to Congress and the Senate holding different views as to Federal and State rights, there is no general Water Power Act at present in force across the border. One had been passed by Congress, and it is now before the Senate. Mr. Van Kennen then resumed his argument.

The Universal Securities Corporation, Limited, bankers, of Outlook, Sask., have purchased the business of the Citizens Security Company, of Glenside, Sask., which they will operate as a branch of their own business. The Glenside branch will be under the management of Mr. L. A. Mann, who has been accountant for Outlook for some time, and Mr. H. G. O. Harper, who has been with the Citizens Security Company for several years. The Universal Securities Corporation, Limited, was established in 1913 and under the management of Mr. J. P. Kennedy has proved itself useful to the community which it serves.

News and Notes of Active Companies—Their Financing, Operations, Developments, Extensions, Dividends and Future Plans

Allis-Chalmers Manufacturing Company.—The statement given in this section last week referred to the Allis-Chalmers Company of the United States, and the title of "Canadian Allis-Chalmers" was wrongly used. The figures for the Canadian General Electric Company, which owns Canadian Allis-Chalmers, Limited, appeared in *The Monetary Times* of March 29th.

Porto Rico Railways Company, Limited.—The following is a comparative statement of earnings of the company for August, 1918, and for eight months ended August 31st, 1918:—

For August.	1917.	1918.	Increase or decrease.
Gross	$ 75,153	$ 92,945	+ $17,791
Net	33,107	22,348	— 10,759
For eight months.			
Gross	598,039	686,948	+ 88,909
Net	268,009	293,713	+ 25,704

Dominion Linens, Limited.—Officials of the company state that business for the past nine months shows more than 100 per cent. increase over the corresponding period of last year, sales to date being considerably more than double those of a year ago, and September business more than treble September, 1917. Operating costs have naturally been greater, but after making allowance for those, profits for the period are nearly 70 per cent. in excess of last year, and this, too, on practically all domestic Canadian business, as war orders have only amounted to a small percentage of the whole, and export business as yet is only a small portion of the total.

The company has orders on hand ensuring capacity operations for the next eight or nine months. As regards raw materials, it is an enviable position. As large stocks of cotton were laid in when the raws were selling at a comparatively low figure, no difficulty has been experienced by the company in getting a sufficiency of raw cotton. As cotton-yarn spinning machines were, through the management's foresighted policy, installed many months ago, it will not suffer from special embargo placed upon American yarns.

Kerr Lake Mining Company.—Owing to the high price of silver the earnings of the company during the year ended August 31st last were very satisfactory. The production was somewhat larger than the previous year, amounting to 2,582,993 ounces. During the year 3,088 feet of development was done by drifting, cross-cutting, raising, and sinking, in the more favorable portions of the property. This development footage compares with 3,105 feet last year.

Shipments for the year amounted to 2,503,619 gross ounces of silver. The smelter settlements aggregated 2,284,487 ounces, the difference being accounted for by the deductions made by the smelting works for losses and in the way of treatment charges. Cost of production totalled 24 74-100 cents per ounce.

The total amount of dividends paid to August 31st, 1918, was $7,710,000.

Estimates of ore reserves as of September 1st, 1918, showed 34,730 tons and 639,800 ounces of milling ore and 997,500 ounces of high-grade silver, a total of 1,637,300 ounces of silver, which compares with an estimated total of 3,120,400 ounces of silver in ore reserves on September 1st, 1917.

Coniagas Mining Company.—With around five million ounces of silver in ore reserves, as of the beginning of the year, and producing at the rate of upwards of one million ounces annually, the record for the current year from the company promises to be on a par with last year. Last year the price of silver averaged 81.47 cents per ounce, thus resulting in large net earnings. During the first half of this year the price of silver maintained an average of 92.8 cents an ounce, whereas with the maximum price now fixed at 101½ cents an ounce, the average for the full calendar year will be 96.805 cents per ounce, or more than 15 cents an ounce over the 1917 average. Thus the Coniagas output, as well as that of other leading mines, takes on enhanced value.

The company is capitalized at $4,000,000, divided into shares of $5 par value each. The company has produced a total of upwards of twenty-six million ounces of silver, and has returned $8,940,000 in dividends to its shareholders. The company entered the field several years ago in search of new mining properties. Among other ventures was the purchase of the Ankerite, and the Maidens-McDonald properties, south of the Dome Mines, in Porcupine. Here evidence accumulates indicative of considerable success. Extensive operations have been carried forward on the Ankerite, and what promises to be a large body of commercial ore has been opened up.

The United Farmers of Middlesex, at a recent meeting in London, Ontario, unanimously passed a resolution opposing tax exemption being applied to Victory Loans, on the grounds that the bulk of the money subscribed to these loans comes from wealthy classes and the result is that the poorer classes have to bear the taxation burden of the country.

While Southern Ontario is suffering from an acute power shortage, the twin cities of Port Arthur and Fort William, at the head of the Great Lakes transportation route, have a power surplus. This is a point of much interest to manufacturers, who will also be interested in knowing that there is in Port Arthur a factory that is available. The plant is fully described on page 14.

FINANCE MINISTER OPENS LOAN CAMPAIGN

(Continued from page 8.)

prosperity of Canada and every class and individual in Canada. Canada is a great producing country. We produce much more than we require ourselves and have the balance for export. The value of these exports has enormously increased since the outbreak of the war. In the fiscal year 1914 there were $450,000,000, last year there were a billion and a half. Our total international trade for 1914 was a billion dollars. Last fiscal year it was two and a half billion. Increased production and higher prices have wrought the transformation. The main items of our export trade are agricultural products and manufacture. The value of agriculture exports, including animal produce, has risen from two hundred and fifty millions in 1914 to over seven hundred millions in 1918. The value of manufactures exported has risen during the same period from $57,000,000 to $636,000,000. The exports from fisheries, forests and mines all show substantial increases. This is what has kept Canada strong to sustain the burden of the war. The Victory Loan is a vital factor in the creation and continuance of our prosperity. The great bulk of our chief exports are bought by Great Britain for the use of her civilian population at home and her armies in the field. She buys the salmon catch of the Pacific, she buys the exportable surplus of the wheat of the western prairies and of the flour manufactured from it. She buys the cheese of the eastern dairy farmer. She buys the output of the hundreds of munition plants of Canada which in turn take the product of our great steel plant. This means the does Great Britain pay for all these products? For the great shipbuilding yards are filled with orders for tonnage. How does Great Britain pay for all these products? For the great part the Dominion government furnishes her with the money. Where do we get the money with which to supply her? From our Victory loans. Last year's Victory Loan was the means of finding a market for hundreds of millions of dollars of our products. It has kept Canada prosperous in all departments of national activity.

Victory Loan Organization

Campaign to be Directed by Representative Executive Committee—Bond Dealers Have Charge of Active Management of Campaign—Various Special Committees Direct Different Branches of Work—Relation Between Executive Committee and Finance Department.

THE 1918 Victory Loan campaign, which will open on October 28th and close on November 16th, will be directed by a committee representing different financial interests in the Dominion. The membership of this committee was drawn up by the Bond Dealers' Association of Canada, with which the minister of finance has acted in the closest co-operation in the planning and direction of the campaign. The list is now practically complete, and includes forty-five members; but a few changes may be made before an official announcement of the names is made. About one-half the number are bond dealers or stock brokers. The other half consists of the chairmen of the different provincial organizations, me of whom are themselves bond dealers, life and fire insurance representatives, newspaper men, etc. Out of the forty-five members on the list as it stands at present twenty are from Toronto, thirteen from Montreal and the balance from the other larger cities of the Dominion.

In constituting this committee it has been the aim of the government to combine the selling skill of experienced bond dealers with the general advice of other financial men in the Dominion. In the active direction of the campaign, however, it is bond dealers and stock brokers who are in almost every case utilized. This is not merely the result of their experience in work of this class, but is also due to the fact that trading in other securities has practically ceased, and the services of this class are, therefore, entirely available for the purpose of the loan.

By means of a separate organization the actual selling of the bonds is thus taken out of the hands of the Department of Finance. It is its duty, therefore, to look after the engraving and delivery, which is accomplished through the assistance of the chartered banks. It is expected that this time a much more satisfactory method will be used; there are still about 25,000 of the first Victory Loan bonds not delivered. In the case of the 1918 Victory Loan, definitive bonds will be ready for delivery upon receipt of payment in full. This will not only complete the transaction in the case of these bonds, but will also have a tendency to encourage the purchase of bearer rather than registered bonds, as in the case of the latter the subscriber must wait for some time before receiving them. The great majority of the transactions will, therefore, be completed at once and the subsequent work of the finance department will be lightened.

The duty of the Dominion executive committee is to direct the campaign throughout the Dominion. In doing this it works through provincial committees, of which there are ten. There are two for the province of Quebec, one being for the Island of Montreal and the other for the province outside of Montreal Island. The other eight provincial committees are for the remaining eight provinces of the Dominion. These provincial committees, acting under the general direction of the Dominion executive, manage the campaign in each province. This is done through the appointment of local organizations for the various counties, parishes, etc., and for the important towns and cities. In the case of Ontario, for instance, there is a separate committee for practically every county, and also for the principal cities. In the appointment of these local committees the chairman and vice-chairman are local men of prominence. There is also an organizer and a secretary, the former being, where possible, an experienced bond salesman, and the latter a local man. Each of these local organizations is supplied by the provincial committee with all supplies, such as posters, application forms, advertising literature, etc. It is by the local committee that the actual canvassing work is managed, and it is expected that all available assistance will be made use of for this purpose. The organizer is, first of all, responsible for apportioning the duties of each canvasser that he secures. The duties of the secretary consist of recording and reporting the applications and attending to the other clerical work of the committee.

In the case of the Quebec provincial organization, it was thought desirable to have a separate committee for the Island of Montreal on account of the large population included there. Mr. J. W. McConnell is chairman of this committee. The committee which has charge of Quebec outside of Montreal Island has two chairmen, Mr. E. A. McNutt and Mr. A. P. Frigon, who are familiar, respectively, with the English and French sections of the province. The Ontario committee is, therefore, the largest single organization, and many of the leading bond men of Toronto are engaged in the work. In the case of Alberta, the provincial organization is divided into two geographical sections, Mr. James Ramsey being chairman of the northern Alberta division, with headquarters at Edmonton; Mr. William Toole is chairman of the southern division, with headquarters at Calgary.

The whole work of the campaign, however, is not handled through these geographical divisions. There are special national committees, among whom the work of general direction is divided. Among these is the Dominion administration and finance committee, with headquarters at 53 King Street West, Toronto. The chairman of this committee is Mr. A. E. Ames; the vice-chairman, Mr. E. Hanson, of Montreal. The treasurer and secretary are Mr. A. H. B. Mackenzie and C. E. Abbs, respectively. This committee has charge of all expenditures in connection with, and also of all matters of administration relating to the campaign throughout the Dominion. Next, there is the Dominion special subscriptions committee, with headquarters at 32 King Street West, Toronto. The principal officers are Mr. J. H. Gundy, chairman; Mr. P. P. Cowan, vice-chairman, and Mr. R. A. Daly, secretary. This committee will have charge of the soliciting of subscriptions from institutions and individuals likely to subscribe for $25,000 or more of Victory bonds, and will co-operate with the various provincial committees formed for the same purpose. Obviously, if the whole campaign were conducted by personal canvassing there would be keen competition among canvassers to secure the large subscriptions of institutions, and in these cases the successful canvasser's commission would be exorbitant. As in the case of the previous loan, therefore, it has been thought desirable that all the larger institutions and individuals should be canvassed by representatives of a special committee of the Dominion executive, working upon a salary basis. Branches of this committee are located in each province and in the larger cities, where they, of course, work in co-operation with the local organizations which direct the ordinary canvassing. For some time past the insurance companies, industrial organizations and other institutions have been circularized to ensure a liberal support of the loan on their part.

The Dominion business committee, whose headquarters are at 26 King Street East, Toronto, has charge of the preparing of forms governing the reporting and recording systems throughout the Dominion and the superintending of the reporting for the Dominion during the progress of the campaign. Mr. W. S. Hodgens is chairman and Mr. C. W. Fleming is secretary of this committee.

One of the first committees to commence work was the Dominion publicity committee, which was engaged in preliminary work as early as the end of July. Its headquarters are in the Ryrie Building, Toronto, Mr. R. A. Stephenson being chairman and Mr. F. A. Sutherland secretary. This committee has charge of all matters pertaining to the general publicity of the Victory Loan campaign throughout the Dominion, co-operating with the Canadian Press Association, and also the various provincial publicity committees. They inaugurated a number of competitions for designs for Victory Loan posters, etc., in reply to which a good response was received. It is also, needless to say, indebted to the Liberty Loan campaign in the United States for many ideas in connection with the promoting of the loan campaign.

This committee, however, does not direct the newspaper advertising, the latter being in the hands of the Canadian Press Association. An organization has also been formed, called the Dominion Press News and Feature Service, with headquarters at 18 King Street West, Toronto, for the preparation of news items for distribution to various papers throughout Canada. These news items are aimed at stimulating interest in the loan and encouraging preparation for it.

INSURANCE SUPERINTENDENTS CONFER

A meeting of superintendents of insurance was held on October 1st and 2nd, in Regina, Sask. Those present included W. J. Vale, superintendent of insurance of the province of Ontario; Charles Heath, superintendent for Manitoba; A. E. Fisher, superintendent for Saskatchewan; Mr. Nicolson, of Edmonton, E. Williams, of the Imperial Guarantee and Accident Insurance Company, of Toronto. Mr. Vale was named chairman of the meeting and Arthur E. Fisher was secretary.

The main item under discussion was the consideration of the standardization of accident and sickness insurance. Statutory conditions were thoroughly discussed and finally adopted. In addition, certain sections relating to this class of insurance were likewise decided upon.

These proposed statutory conditions and sections will be drafted in a conference bill to be submitted for approval to the various ministers in charge of the provincial insurance departments.

The question of automobile insurance and matters relating to agents' certificates of authority were also considered. The sessions were held in the private bills committee rooms at the Parliament Buildings.

MORE INSURANCE ON AUTOMOBILES

In view of the probable increase in the market values of second-hand automobiles due to the restrictions on the manufacture of new automobiles, the executive committee of the National Automobile Underwriters' Conference has voted to increase the percentage limits of insurance on cars more than six months old by an additional 10 per cent. of the list price, the higher valuations being made effective immediately. Under this new ruling cars in group two, that could only be insured for 70 per cent. of the list price, can now be insured up to 80 per cent. of their original list price; group three cars, heretofore insured for 60 and 50 per cent. of list values, can now be insured up to 70 and 60 per cent.; group four cars, heretofore limited to 40 and 30 per cent. of list price can now be insured up to 50 and 40 per cent., and group five cars, formerly limited to 30 per cent. of list price can now be insured up to 40 per cent. of the list price. While the increase in the insurable valuations allowed is only 10 per cent. of the list price, it is in reality a much larger increase. For instance, cars in group five, that could only be insured under the former rule for 30 per cent. of their list price of $750, or $225, can now be insured for 40 per cent. of the list, or $300, an increase in insurable value of 33½ per cent.

Save! Remember, the war has cost Canada a billion dollars, and the end is not yet.

The Ontario Organization of Resources Committee is appealing to all in the province to assist in saving the apple crop.

The Bank of Montreal announces that its temporary branch at Niagara Camp is to be transferred to Exhibition Camp on or about the 12th instant.

An association of returned soldiers has been formed under the name of the "Grand Army of Canada." It will take into membership all who have at any time served in the British or Canadian armies, including anyone who has enlisted in the Canadian Expeditionary Force and has obtained an honorable discharge. The new association will not accept grants of money from municipalities or provinces, but will be entirely self-sustaining. It will be organized for political action, to inaugurate a sick benefit fund, and to engage in co-operative business as opportunity permits.

CHANGES IN CANADIAN PACIFIC ADMINISTRATION

Changes in Heads of Road, But no Break in Continuity of Management

Mention was made in *The Monetary Times* of October 11th of several important changes in the management of the Canadian Pacific Railway. Lord Shaughnessy has retired from his position as president of the road, but remains chairman of the board of directors. The new president is Mr. E. W. Beatty, K.C., formerly vice-president and general counsel. Sir George Bury has resigned from his position as vice-president, which is filled by Mr. Grant Hall, formerly vice-president in charge of western lines.

Lord Shaughnessy was born in Milwaukee, Wis., in 1853. He entered the purchasing department of the Milwaukee and St. Paul Railway in 1869, and was general store keeper of the Chicago, Milwaukee & St. Paul Railway from 1879 to 1882. In the latter year he joined the Canadian Pacific as general purchasing agent. Afterwards he was assistant general manager, assistant to the president, and, after 1891, vice-president and director. In 1899 he became president of the road. He was made a peer in 1916 and is well known, not only throughout Canada, but all over the world, as the head of the great Canadian railway. In addition to being connected with the Canadian Pacific he is also a director of the Reid Newfoundland Company, of the Bank of Montreal, Royal Trust Company and the Commercial Cable Company.

The new president, Mr. Beatty, is only 41 years of age. He was born in Thorold, Ontario, and educated at Upper Canada College, Toronto University, and Osgoode Hall Law School, Toronto. After graduating from the latter he became an assistant in the law department of the Canadian Pacific Railway; assistant solicitor in 1905; general solicitor, 1910; general counsel in 1913; and vice-president and general counsel in 1914. Mr. Beatty is also a director of the Royal Trust Company.

LORD SHAUGHNESSY,
Retiring President of the Canadian Pacific Railway.

Sir George Bury retires from the position of vice-president on account of ill-health. He entered the service of the company in the early part of 1883, as a stenographer, when Lord Shaughnessy was general purchasing agent, and during the following thirty-five years he steadily advanced, receiving promotion after promotion in recognition of the fidelity and ability with which his duties were performed, wherever he was located and whatever his position, until he finally became vice-president and a member of the executive committee.

"Unfortunately, his state of health has not been satisfactory for a couple of years past, and with a view to rest and recuperation he asked to be relieved from the duties of the vice-presidency, and his request was granted by the board of directors. Although he has retired from the official position, he will not be entirely disassociated from the company's affairs."

Mr. Grant Hall, now vice-president in place of Sir George Bury, has risen through the mechanical departments of the road. After being for some time superintendent of motive power of western lines, he became assistant general manager in the west under Sir George Bury, whom he later succeeded as vice-president and general manager of western lines.

E. W. BEATTY,
President, Canadian Pacific Railway.

Further changes were announced on Tuesday, October 15th, the following two appointments being made:—Mr. A. D. MacTier as vice-president, in charge of lines east of Port Arthur, with office in Montreal, and Mr. D. C. Coleman, as vice-president, in charge of lines west of Port Arthur, with office at Winnipeg. Both Mr. MacTier and Mr. Coleman will report to Mr. Grant Hall, vice-president of the company, at Montreal.

Mr. A. T. MacTier was born in Scotland in 1867, entering the service of the Canadian Pacific Railway in 1887. Commencing as a stenographer in the baggage department, he became assistant to the superintendent of sleeping and dining cars in 1889. From 1891 to 1896 he was in the car service, stores and fuel departments, and from 1896 to 1899 was general baggage agent. From 1899 to 1907 he held the position of general fuel agent, when he was appointed assistant to the vice-president. In December, 1912, he was appointed general manager of the eastern lines.

Mr. D. C. Coleman was born at Carleton Place, Ont., in 1879, joining the Canadian Pacific Railway as clerk in the assistant engineer's office at Fort William in 1899. Rising rapidly, he was appointed superintendent at Nelson, B.C., in 1907, and in 1908 was superintendent of car service, western lines. In April, 1912, he was appointed general superintendent of the Manitoba division at Winnipeg. In 1913 he became general superintendent at Calgary, and in 1915 assistant general manager, western lines, Winnipeg.

FIRST-HAND REPORTS FROM THE WEST

Mr. George W. Goodall, western manager of *The Monetary Times*, left last week on his fall tour of Manitoba, Saskatchewan, Alberta and British Columbia. His weekly letters, dealing with western conditions, will appear in *The Monetary Times*. The first is found upon another page of this issue.

PERSONAL NOTES

Mr. James W. Baines, assistant manager of F. W. Bird, Son and Company, of Hamilton, Ont., died suddenly on October 14th.

Mr. F. R. Graham, of Graham, Sanson and Company, Toronto, has been elected a member of the Toronto Stock Exchange.

Mr. S. Gordon Thompson, manager of the Prince George Hotel, Toronto, died on October 5th, following an attack of pneumonia.

Mr. James McGeorge, one of Edmonton's foremost citizens, has been elected to the directorate of the Alberta-Saskatchewan Life Insurance Company.

Mr Richard B. Fudger, director of the Robert Simpson Company, Toronto, died at his summer home, Bexhill Farm, near Clarkson, Ont., on October 11, after having been confined to bed for about two months.

Mr. Georges Gonthier has been appointed to succeed Mr. Tancrede Bienvenue as a member of the board of censors of the Credit Foncier Franco-Canadien, Mr. Bienvenue having succeeded the late Dr. E. P. Lachapelle as director.

Mr. William Herbert Robinson, president and general manager of the Penn Spring Works, and a former resident of Toronto, is dead at the age of 54 years, at Baldwinsville, near Syracuse, N.Y., where he had lived for the past 20 years.

Mr. J. W. Plewes, for many years public school superintendent in Chatham and principal of the central school, has resigned. Mr. Plewes has secured an appointment with the income tax department in the western Ontario territory with headquarters at London.

Mr. Frank S. Scott, treasurer of the Grand Trunk Railway system, has been elected a member of the board of directors of the Central Vermont Railroad. Mr. Scott is a director of the Grand Trunk Pacific Railway, and a number of subsidiary enterprises.

Mr. W. J. Hanna, president of the Imperial Oil Company, and **Mr. W. O. Stillman**, vice-president of the company, are on a tour of the western provinces. Their inspection trip will include the principal plants and distributing points of the Imperial Oil Company.

Mr. E. A. Weir, a graduate of the Agricultural College at Guelph, Ont., has been appointed agricultural director for Ontario. His actual duty will be to assist in every possible manner in the formation of new organizations and the betterment of those which have already been set in operation.

Judge Arthur Wellesley Vowell, formerly associated with the Department of Indian Affairs as superintendent for British Columbia for many years and as a member of various reserves commissions, has ended his active and purposeful life by shooting himself at his home in Victoria, B.C

Mr. George E. Swan has just been appointed casualty and bonding insurance manager for Black and Armstrong, Winnipeg Mr. Swan was for 14 years with the Globe Indemnity Company of Canada, in Montreal. He is well known in insurance circles and was for some time an executive officer of the International Claims Association.

Mr Henry Y. Braddon has been appointed Australian trade commissioner in the United States. He was formerly director of Dalgety, Limited, for Australasia. It is expected that he will visit the United States shortly and make recommendations to the Australian government with a view to forming a working trade arrangement with the United States government

Lieut.-Col F. A. Gascoigne, D.S.O., has been appointed secretary treasurer of the Canadian Pacific Ocean Services, under Mr G. M. Bosworth, the recently-appointed chairman of that branch of the Canadian Pacific Railway service. The appointment goes into effect immediately. Previous to the war Lieut.-Col. Gascoigne was assistant superintendent of car service, Eastern lines.

Mr Randolph Hersey, a pioneer in the iron trade in Montreal, and for a long period a member of the Pillow and Hersey Manufacturing Company, died at his residence, 367 Elm Avenue, Westmount, on October 6th, at the age of 89. Mr. Hersey had retired from active business in 1903, spending considerable time in travel, and had been living in California until a recent date.

Mr. John W. Ross and **Lieut.-Col. Gerald W. Birks** have been elected directors of the Crown Trust Company. Mr. Ross has figured prominently in connection with war efforts, more particularly in the Victory Loan campaign and Y.M.C.A. work for soldiers. Lieut.-Col. Birks is an enthusiastic worker among Y.M.C.A. forces at the front, and has figured prominently in campaigns to raise funds to further the work.

Mr. W. A. Matheson, of Winnipeg, has been elected to the directorate of the Sterling Bank of Canada. Mr. Matheson is general manager for western Canada and director of the Lake of the Woods Milling Company, Limited, president Sunset Manufacturing Company, Limited, vice-president and director Monarch Life Assurance Company, director Standard Trusts Company, director Royal Canadian Securities Company, Limited, member of the executive, board of grain supervisors, member of the council, Winnipeg Grain Exchange.

WINNIPEG RAILWAY'S MANAGER

Mr. A. W. McLimont has recently completed his first year of management of the Winnipeg Electric Railway Company, and the period has been one of the most difficult in its history. The company is experiencing the same difficulties as practically all other utility companies—viz., that of meeting rapidly rising costs by means of a revenue which is practically fixed.

A. W. McLIMONT,
General Manager, Winnipeg Electric Railway Company.

Mr. McLimont went to Winnipeg ripe in experience and outstanding ability and his successful handling of a very difficult situation is considered no mean achievement. Within a few months of his appointment his policy of give and take resulted in a contract being entered into with the city of Winnipeg by which the jitney competition, then a vital and vexatious question, was eliminated, and other long standing disputes with the authorities amicably settled.

By popular vote he was elected to the directorate of the re-organized Winnipeg Board of Trade, which has over [illegible],000 members, and apart from this is making himself felt in every movement of public good in Manitoba's capital. Mr. McLimont is convinced that the time has arrived when the word "co-operation" should be the solution of all public utilities and he is putting his conviction to the test.

Prior to coming to Winnipeg Mr. McLimont was identified with a number of similar important properties and his work has resulted in his being looked upon as an expert. It is the opinion of a great many Winnipeg observers that Mr. McLimont's work in connection with the Winnipeg Electric has been very successful and that the shareholders are to be congratulated on having so able an administrator as Mr. McLimont in charge of their property.

On the 7th instant the United Kingdom opened its campaign for a second £1,000,000,000 of war loan The government has been borrowing for some time continuously, and the first billion series was recently completed.

TRAINING CANADIAN BANKERS

Nearly everyone who has written comprehensively upon the Canadian banking system has expressed himself favorably upon the method of training bankers here. The efficiency of Canadian bankers is also partly attributed to the wide experience which the branch system, coupled with the method of training by frequent promotions of small degree, permits. Until the past two or three years Canadian banks very seldom filled new positions except by promotion, and new employees invariably commenced as beginners at an early age. The result is that the Canadian banker at the age of thirty is already thoroughly trained in all the operations of the ordinary branch bank, has gained his experience in numerous branches of varying size and importance, and is capable of managing a separate branch. During the few years preceding 1914, when most of the banks were extending their operations with phenomenal rapidity, an excellent supply of material for the management of new branches was thus available. Even at this, it was sometimes difficult to find competent managers, and new branches in the west were frequently placed in charge of men under thirty, while every effort was made to develop the requisite capacity for responsibility in the promising clerk.

The system has been found, however, not by any means perfect. The bankers were thoroughly trained in their own sphere, and none other. It has been found more difficult to fill the higher positions of inspection and superintendence than the lower one of the branch manager. This has been particularly the case with the banks which have extended their operations abroad, and which required men of wide development and ready adaptability for the purpose.

In the United States a totally different method has been pursued. The different stages there are more stereotyped, and positions are frequently filled by transference from similar positions in other institutions. Men trained in spheres other than banking are often introduced into superior places in the banking sphere. The banking organizations there are moreover much smaller, and do not furnish the same variety of material to draw upon. Several of the large institutions in New York have adopted the policy of engaging men of good education and training them especially for work in the foreign field. This is, it may be observed, also characteristic of other industrial corporations there, such as the Standard Oil Company, and of financial institutions.

We do not consider the United States method superior to our own. Through the lack of a good supply of trained men in Canada the banks have been forced to develop the present system, and no doubt it is the best under the circumstances. As a result of depleted staffs, however, they have in recent years had to enlarge their methods of recruiting, and men and women of other experience have been rapidly absorbed with little or no process of training through the junior positions. And if Canadian banks are to develop their foreign work, which has already become a credit to our country, they will probably find it necessary to relax their methods still further. A new supply is, moreover, now available through the development of Canadian industry and finance and the inclusion of commercial and banking training into the educational courses of our technical schools and universities. No hard-and-fast standard of qualification can any longer be set for Canadian bank material, and methods should be broadened in accordance with the wider development which must be aimed at by Canadian banks in maintaining and promoting our economic position at home and abroad.

A NATIONAL ROAD IN PRIVATE HANDS

Important changes in the management of the Canadian Pacific Railway were announced a week ago, and are fully described upon another page of this issue. The retiring president, Lord Shaughnessy, remains as chairman of the board of directors. Lord Shaughnessy has been connected with the road for a long time, and has been the active head since 1898. As the Canadian Pacific Railway is the greatest railroad in the world, it is natural, therefore, that he is regarded as one of the leading railroad men in the world. He will continue to direct the activities of the company, and it is generally expected that under his new capacity he will have more time to direct operations in connection with reconstruction. The new president, Mr. E. W. Beatty, formerly vice-president and general counsel, will be active head of the system. He is a lawyer by training and experience, and is, therefore, well fitted to guide the company through its relations with the Dominion and Provincial Governments, and, what will probably be more difficult, with the enlarged national system of railways which is being established in Canada.

Much of the success of the Canadian Pacific Railway is undoubtedly due to the liberal land subsidies which it received at its commencement. These land holdings have accounted for a considerable part of the company's revenue. There is no question, however, but that the system has been operated with sound judgment, expanding in anticipation of the country's needs, but not branching out along lines which could not pay expenses. As a result, it is one of the best-paying systems in existence, competes on even terms as regards rates with other Canadian roads, and pays a special tax to the Canadian government, consisting approximately of the difference between its income under the new schedule of roads and what its income would be under the old schedule. What is just as important, moreover, is the fact that enormous sums are paid annually by the Canadian Pacific to municipalities throughout the Dominion in taxes. In comparing the operations of the road with those of a public system, therefore, this must be taken into consideration.

The personnel of the directorate includes some of the best-known Canadians. In addition to Lord Shaughnessy, Mr. Beatty, Mr. Grant Hall and Sir George Bury, there are upon the directorate R. B. Angus, Hon. F. L. Beique, Hon. J. Dunsmuir, Sir H. S. Holt, C. R. Hosmer, W. D. Matthews, Col. F. S. Meighen, Sir V. Meredith, Sir A. M. Nanton, Sir E. B. Osler, Mr. J. K. L. Ross and Sir Thomas Skinner. Continuity of management has done much to establish its reputation, not only in Canada, but in the eyes of investors throughout the world.

Buy Victory Bonds

FORECASTING THE INCOME TAX

One of the most valuable features, to many investors, of the war bonds offered by the Dominion government, is the exemption from Dominion taxation. We have all come to realize that the income tax has become a permanent institution in Canada as in the United States and Great Britain, and that it is not likely to be surrendered, even after the financial pressure of war conditions is removed. It is a source of revenue which is capable of being increased indefinitely with the least interference to industry and trade. There is, moreover, no danger of dividing east and west upon the question of income taxation, as there is upon that of the tariff. The tax will, therefore, grow just as long as the war lasts, and with each increase the value of tax exempt securities becomes more and more apparent.

The present Victory Loan, like the previous war loans issued in Canada, is to be free from taxation, but it is quite possible that future loans will be subject to tax. Practical appreciation of the feature during the past year has been illustrated by the strength in the price of the old issues upon the market. Bonds of the first Victory Loan sell at par, yielding 5½ per cent., a price which is higher than that at which they were issued to the subscribers. The three older issues have for some time been at a discount as compared with their issue price, but are considerably higher than during the greater part of 1917 and the early months of the present year. If, therefore, it is decided to cease issuing tax-exempt securities in future, the demand for the present bonds will be increased still more, and in spite of the fact that there will be enormous quantities of them in Canada, it would not be surprising if they all advanced considerably further in price. Taxable bonds will be equally appreciated by the man of small income, but the man of large income would require a much higher yield upon them in order to make his net return equivalent to that which he receives from a tax-free security.

The special committee of the Bond Dealers' Association, which has managed the trading in Victory Loan bonds, has no doubt performed a useful function in maintaining a prompt and steady market for their purchase and sale. After the campaign had closed there was a tendency towards liquidation on the part of large corporations who had subscribed through patriotic motives to help the campaign, and on the part of many smaller subscribers who found themselves unable to meet their instalments. The vast majority of the bonds had, however, been securely placed, and those which were offered on the market found a ready sale. In fact, dealers had soon to commence a canvass to find sellers, and were able to advance the selling price from 98⅞ to 99½, and the purchase price proportionally. Some weeks ago the selling price was again raised to 100. Co-incident with this period of strength in the market were government preparations for the assessment and collection of the income tax, and the finance minister's announcement, in the budget speech in May of a higher scale. The dealer's margin of profit was also, it will be observed, increased, and a greater incentive in this way was given to trading in the bonds. The special committee's fixation of standard prices is an advantage, but an aggressive selling campaign cannot be carried on upon a profit of one-quarter of one per cent. The increased margin of profit makes this possible; but a security with such an unparalleled breadth of market and volume of trading can very well be dealt in on a stock exchange basis.

1918—VICTORY LOAN BULLETIN—1918

CAMPAIGN NOTES COMMITTEE REPORTS PERSONAL MENTION

The Editorial Department will be pleased to receive and publish each week items of news for this page.

LAMBTON'S OBJECTIVE, $2,500,000

Mr. W. C. Brent, divisional organizer of the Victory Loan, was in Sarnia on October 10th, and addressed the local workers. Lambton's objective this year is $2,500,000, and the indications at present are that this sum will be easily raised.

G. H. WOOD,
Chairman, Ontario Victory Loan Committee.

VICTORY LOAN AT VANCOUVER

The first gun of the Victory Loan, 1918, was fired in Vancouver on October 7th, at a meeting held at the Board of Trade rooms. There was an assembly of the general committee, and a review of the work done through many tireless hours preceding the launching of the actual campaign, was given by W. H. Malkin, chairman of the British Columbia organization.

QUEBEC SPECIAL NAMES COMMITTEE.

The special names committee's chief duty is to canvass those likely to give large subscriptions. The Quebec division committee in the last campaign raised $44,000,000 free of all commission, and the intention this year is to raise at least $50,000,000. There is no distinction between French and English on this committee, all working gladly together for the common good of Canada. The following is the personnel of the special names committee of the Quebec division:—

H. W. Beauclerk, J. W. Ross, James Carruthers, A. J. Brown, K.C., P. P. Cowans, J. W. McConnell, W. McMaster, Zephirin Hebert, Rene T. Leclerc, J. W. Kellam, F. W. Molson, J. [illegible], E. A. McNutt, J. M. Mackie, F. C. [illegible], Hon. J. M. Wilson, A. P. Frigon.

HALIFAX PUBLICITY COMMITTEE

The personnel of the publicity committee for Halifax is as follows:—

J. C. Stewart (chairman), A. G. Watson (secretary), H. E. Mahon, J. W. Power, J. G. Rainnie, A. G. Watson, R. H. Williams, J. S. Wallace, T. H. Curry, C. J. Burchell, J. F. O'Connell, W. H. Dennis, F. A. Gillis, J. L. Hetherington, E. C. Young.

NEW WESTMINSTER READY FOR DRIVE

The Victory Loan organization for New Westminster district is now well under way, and chairmen and secretaries of New Westminster and the surrounding municipalities have been appointed as follows: Langley, Reeve Wark, F. McPherson; Mission, J. A. Catherwood, J. A. Bau; Maple Ridge, Rev. G. Finday, H. W. Hall; Port Coquitlam, Mayor Keith and C. F. Lobb; Coquitlam, Reeve Marmont, Robt. Newman; Surrey, Reeve Sullivan, H. Bose; New Westminster, Rev. F. W. Kerr and Herbert M. Fox.

J. W. McCONNELL,
Chairman, Victory Loan Committee, Montreal Island.

BURNABY PREPARES FOR LOAN CAMPAIGN

The first order to advance with Burnaby's share in the big Victory Loan campaign was given on October 7th in the municipal hall at Burnaby by Dr. Judson Clark, who explained the necessity for the success of this loan and the honor bestowed on the people of this province in being able to contribute their share to the grand result.

Mr. Reeve Fraser was in the chair. He pledged the support of the municipality to the drive and promised to give it all the assistance he personally could muster. Further organization meetings will be held in the near future.

PRELIMINARY WORK FOR VICTORY LOAN

The various Victory Loan committees throughout Canada are actively engaged with the preliminary work of the campaign, which opens on October 28th. Sir Thomas White is continuing his trip through Western Canada, speaking in public and meeting the executive committees at the provincial centres. Other members of the Dominion government are planning to speak in the campaign. The minister of finance has also arranged for the active co-operation of all provincial premiers and treasurers in their several provinces, and for the assistance of members of the Dominion Commons and Senate.

(British and Colonial Press Photo.)

A. E. McNUTT,
Joint Chairman, Victory Loan Committee, Quebec Province.

MONTREAL DRIVE GETTING WELL UNDER WAY

The organization of the Montreal Victory Loan drive is now well under way, and Mr. J. W. McConnell is again chairman. The army of Montreal canvassers alone has to systematically canvass 750,000 people—the objective of Montreal being $100,000,000.

The honorary chairmen of the Montreal organization are Rt. Hon. Lord Shaughnessy, K.C.V.O., and the Hon. Sir Lomer Gouin, K.C.M.G., while with Mr. McConnell are associated as vice-chairmen: P. P. Cowans, Zephirin Herbert, Rene T. Leclerc, John W. Ross, A. D. Anderson, honorary treasurer; and R. C. Holden, honorary secretary.

The executive is composed of prominent men in the city and number among them: E. W. Beatty, K.C., H. W. Beauclerk, W. M. Birks, W. A. Black, Jas. Carruthers, Sir Mortimer Davis, J. N. Dupuis, Sir Herbert S. Holt, F. P. Jones, Howard G. Kelley, Brig.-Gen. A. E. Labelle, Geo. H. Montgomery, K.C., Wm. McMaster, Joseph Quintal, E. F. Slack, Hon. J. M. Wilson, and Mark Workman: Mr. H. R. Drummond is chairman of the finance committee; Mr. J. N. McKim, chairman of the publicity committee; Mr. R. N. Watt, chairman of the employees' committee; and Mr. Geo. Montgomery, chairman of the trouble committee.

Mr. J. N. McKim, who is chairman of the local publicity committee, is organizing a fund to cover the cost of paid advertising in local press in connection with local activities. The necessity of such a fund was very evident in the last campaign, although individual firms came to the assistance of the publicity committee.

The total number of individual subscribers in the Montreal district for the Victory Loan of 1917 was 98,000, netting $77,000,000, this result being secured at the exceedingly low cost of less than one fifth of one per cent. This year the Montreal committee has secured 200,000 buttons for distribution, as it is expected that the number of small subscribers will be larger than before, and everyone must have a button.

MONTREAL MAYOR PLEDGES SUPPORT

Mayor Martin, of Montreal, has issued a public appeal to the citizens of Montreal to subscribe generously to the new Victory Loan, which should be done, he says, to secure peace and to oppose autocracy.

Mayor Martin says that as he has been requested by organizers of the loan to give his support to this national work, he was pleased to say he would take an active part therein and would encourage the Canadian people to subscribe generously.

The Mayor expresses the hope that all those who can lend money of whatever amount to support the cause defended by our heroes will do so without hesitation. "This is not a loan of a particular class," adds the Mayor. "It is not a loan exclusively for the rich. It is a loan for the entire Canadian people, for the artisan as well as for the financier, for the small proprietor as well as for the millionaire."

Even supposing, adds the Mayor, that the national debt is growing, it should be remembered that if the country was not supplied with the means of meeting the existing situation, would not the end of the war be delayed, or its success compromised? The German people were there as a living example to show how far Prussian tyranny could go.

The Mayor concludes his appeal with the hope that the new loan would surpass all expectations. "Let us subscribe," he says, "en masse to the new Victory Loan."

(British and Colonial Press Photo.)

A. P. FRIGON,
Joint Chairman, Victory Loan Committee, Quebec Province.

LONDON ORGANIZING FOR COMING LOAN

Elaborate plans for conducting the Victory Loan campaign in London, Ont., are being prepared under the direction of George M. Reid, general chairman of the drive, and Capt. J. A. G. Clarke, the organizer. The city is to be laid out in four divisions under the captaincies of Controller E. S. Litte, R. D. Macdonald, J. K. McDermid and Arch. McMahen. Mr. Arthur White takes charge of an industrial employees' committee, while Lieut.-Col. W. J. Brown, A.A.G., of district headquarters, has been assigned the duty of preparing plans to reach the soldiers in training in London. A team will be sent after persons expected to subscribe amounts of $5,000 to $25,000 and headquarters' executive will look after subscriptions of greater sums.

Sir Thomas White, finance minister of Canada, who was on his way to tour the western cities of the Dominion and speak on behalf of the new Victory Loan, has cancelled all his engagements on account of the epidemic of Spanish influenza. He will return to the east immediately.

AID SMALL INVESTORS TO BUY VICTORY BONDS

The finance department announces that arrangements have been made whereby the Canadian chartered banks, in order to encourage investors to participate, will grant reasonable credits to subscribers to the forthcoming loan who have a practical certainty of repaying the advances within one year. The banks will advance up to 90 per cent. of the subscription, the rate of interest being the same as that earned by the bonds, namely, 5½ per cent. per annum. Reduction payments may be made monthly or quarterly.

The banks will also accept from small investors for safekeeping, without charge, the interim securities and later the bonds themselves, to a reasonable amount, for the term of one year.

These arrangements have been made for the purpose of giving the greatest possible encouragement and assistance to small subscribers.

NEWSPAPER MEN TO HELP VICTORY LOAN

A large number of newspaper workers gathered at a luncheon in Vancouver on October 8th, when the executive of the organization for floating the loan met them and explained the plans for the greatest financial move in the history of Canada.

The chairman, W. H. Malkin, welcomed the newspapermen, and expressed his appreciation of the power of the press and the work that has been done in the past in promoting patriotic loans. He particularly pointed out the necessity of securing a great number of subscriptions to this loan, so that every citizen will be interested in the fortunes of the country. On behalf of the news press feature committee, of which he is chairman, Mr. John Nelson dealt with the great possibilities that were before the press in this campaign. He particularly spoke of the news feature of the campaign and the creation of a proper atmosphere through the daily newspapers.

WEEKLY BANK CLEARINGS

The following are the bank clearings for the weeks ended October 11th, 1917, and October 10th, 1918, respectively, with changes:—

	Week ending Oct. 10, '18.	Week ending Oct. 11, '17.		Changes.

INVESTMENTS AND THE MARKET

News and Notes of Active Companies—Their Financing, and Future Plans

Granby Consolidated Mining and Smelting Company.—For the fiscal year ended June 30th the company showed earnings before dividends of $1,527,133, or $10.18 per share, comparing with $3,966,286, or $26.44, in the previous year.

Demerara Electric Company, Limited.—The following is a statement of earnings of the company for August, 1918:—

	Gross.	Net.
Railroad	$7,416.54	$1,125.22
Light and power	7,971.52	4,022.44
Miscellaneous	......	115.68
Total		$5,263.34

Trinidad Electric Company, Limited.—The following is a statement of the earnings of the company for August, 1918:—

	Gross.	Net.
Railroad	$10,474.24	$2,354.15
Light and power	10,588.51	3,540.23
Ice and refrigeration	3,470.81	886.00
Total		$6,780.38

Brazilian Traction, Light and Power Company.—The increase of the company's earnings for August, 1918, over August a year ago was 1,193,000 milreis. In July the increase over the preceding July was 1,214,000 milreis.

The gross earnings for the month were the largest in the company's history, aggregating 9,491,000 milreis, an increase of 1,427,000 over the corresponding month a year ago.

Operating expenses show another decline, the increase for the month being only 234,000 milreis, as against an increase of only 456,000 milreis in the month of July.

The approximate figures for August compare as follows:—

	1918. Milreis.	1917. Milreis.	Inc. Milreis.
Total gross earnings	9,491,000	8,064,000	1,427,000
Operating expenses	4,281,000	4,047,000	234,000
Net earnings	5,210,000	4,017,000	1,193,000
Aggregate gross earnings from January 1st	68,649,000	60,505,000	8,144,000
Aggregate net earnings from January 1st	34,975,000	32,268,000	2,707,000

Russell Motor Car Company.—The financial statement which is to be presented at the annual meeting of the company on October 25th will be interesting and encouraging reading for the shareholders, despite the fact that the net gain for the year shows some decline from that of the previous year. For the year ended July 31st last the net gain was $628,581.55; in 1917 it was $643,590.56. With the $47,580.67 brought forward from the previous year there was $676,162.22 available for distribution. Of this sum, $84,000 was paid out in dividends on the preferred stock and $56,000 in dividends on the common, leaving a balance to be carried forward of $536,162.22. The figures mentioned are after appropriations had been made to provide against all reasonable contingencies in the business and after making provision for payment of estimated Dominion war tax on profits. During the course of the year the company distributed $25,000 to various patriotic and charitable organizations, and the shareholders will be asked to approve a similar distribution during the current year. The company has, moreover, operated a machine shop specially set aside for the training of returned disabled soldiers, and has had very gratifying results in the improvement shown in a number of these men.

The statement of profit and loss as at the end of July, 1918, was as follows:—

Balance brought forward from July 31st, 1917		$ 47,580.67
Net gain for year ended July 31st, 1918		628,581.55
(Provision having been made for war profits tax, directors' fees and other contingencies.)		
Dividend on preferred shares for year ended July 31st, 1918	$ 84,000.00	
Dividend on common shares	56,000.00	
Balance carried forward	536,162.22	
Totals	$676,162.22	$676,162.22

COMPANY LAW IN CANADA

Recent Decisions Are Reviewed in Address Before Convention of Dominion Association of Chartered Accountants at Montreal

BY THOMAS MULVEY,
Under-Secretary of State for Canada.

The Bonanza Creek Mining Company Case.

(Continued from last week.)

The judgment of Lord Justice Blackburn and also the judgments of the members of the House of Lords on an appeal from the Exchequer Chamber, were very fully dealt with in the argument of the Bonanza Creek Mining Company case before the Judicial Committee of the Privy Council. While that argument may not be adduced before the Judicial Committee of the Privy Council as an argument in another case, and may not be referred to as binding the members of the committee, nevertheless, the discussion which took place respecting this judgment is pertinent for the purposes of indicating what their Lordships had in mind in deciding the Bonanza Creek Mining Company case as they did. It is unnecessary to repeat any portion of the very lengthy argument which took place. It is fair to say that that argument shows that their Lordships held that the Bonanza Creek Mining Company, Limited, was the kind of company which Lord Justice Blackburn held the Ashbury Carriage Company to be, in his judgment, in the Exchequer Chamber.

The next step in the argument is to consider the precise decision in the Bonanza Creek Mining Company case. The facts are as follows: The Bonanza Creek Mining Company, Limited, was incorporated under the Ontario Companies Act, for the purpose of carrying on a mining business. There was no limitation upon the area of the operations of the company, and it commenced business in the Yukon. A license under the Foreign Corporation Act was issued by the commissioner of the Yukon Territory. Free mining licenses were also granted to the company. The department of the interior also entered into contracts with the company respecting certain mining leases. The action was brought for breach of these contracts, and on a fiat being granted, the Crown raised the defence that it was not competent for the company to carry on business outside the province of Ontario. This issue brought in question the capacity of provincial companies to carry on business outside the incorporating province, which was long standing. The provinces, under the British North America Act, section 92, paragraph 10, are authorized to incorporate companies with provincial objects. The exact significance of the words "provincial objects," was under consideration long before the Bonanza Creek Mining Company case was commenced. In fact, it had been under discussion since the year 1907, when the judges of the Supreme Court propounded certain questions to be argued in the case "Canadian Pacific Railway Company vs. the Ottawa Fire Insurance Company," which was then standing for judgment before the Court. There was no effective decision given in answer to these questions, and the Governor General in Council subsequently directed certain other questions of similar effect to be submitted to the Supreme Court. These questions were twice before the Judicial Committee of the Privy Council and were argued with the Bonanza Creek Mining Company case. It is fair to say that the attitude of the Crown in the Bonanza Creek Mining Company case was taken more for the purpose of bringing forth a decision on the question just mentioned in a concrete case. Their Lordships of the Privy Council, however, appear to have considered the attitude of the Crown as harsh. Throughout the argument of the Canadian Pacific Railway vs. the Ottawa Fire Insurance Company and the stated companies case, it was never contended by Canadian counsel that companies incorporated under the Ontario or Dominion Act were common law companies. Their Lordships of the Judicial Committee, suggested this argument and followed it to its conclusion, apparently for the purpose of reaching a decision to their satisfaction in the Bonanza Creek Mining Company case. They, in effect, held that companies incorporated under these statutes are common law companies and have the capacity of a natural person. They followed the Sutton Hospital case, which was referred to at length in Lord Justice Blackburn's judgment and approved of his conclusions.

The judgment in the Bonanza Creek Mining Company case makes no reference whatever to the authority of directors. That question was not raised, in fact, it was not necessary to raise it because the transactions there involved were quite within the authority of the directors. The company was incorporated to carry on a mining business, and that was the business which was carried on in the Yukon. The leases with the Dominion government were mining leases, and unquestionably the directors had authority to make them. The judgment in the Bonanza Creek Mining case throws no light whatever upon the authority of directors.

It is unnecessary to refer to the various decisions upon the subject, and it is quite sufficient to say that prior to the Bonanza Creek Mining Company case and since the time of Ashbury Railway Carriage Company vs. Riche, it has been the settled law that the directors of a company are authorized to carry out any transaction within the purpose or object clause in the charter. In entering into such a contract, there is no necessity to obtain the concurrence of the shareholders. The directors are clothed with authority to bind the company to the extent of such transactions. It was also the law that the company itself could not transcend the authority conferred upon it by the charter, that its powers were limited to the purposes and objects set out. The authority, therefore, of the directors and the capacity of the company were coterminous. Because the capacity of the company has been extended by the operation of the decision in the Bonanza Creek Mining Company case, appears to afford no reason why the authority of the directors is also extended. The argument in the Bonanza Creek Mining Company case and the judgment of Lord Justice Blackburn in Riche vs. the Ashbury Carriage Company case in the Exchequer Chamber impel one to a different view. There can be no question but that their Lordships of the Judicial Committee had in mind the kind of company which Lord Blackburn had in writing his judgment, that is, a company which was not limited in its capacity to the purposes and objects set out in the charter, but which could, with the concurrence of all the shareholders enter into contracts beyond those specified in the charter.

It is not a criticism of Lord Blackburn's judgment to say that it is not applicable to a Canadian company, because by the Interpretation Act all the shareholders are not required to concur in acts which bind the company. Lord Blackburn had in mind a corporate partnership and not a company under the Dominion Act in writing his judgment. Nevertheless, the substantial principle involved is applicable, that in transactions beyond the purposes and objects set out in a charter the concurrence of the majority of the shareholders is required.

Having set out in a fairly superficial way the arguments upon the subject, it is now necessary to go more minutely into the judgments referred to, so that it will be seen that the conclusions which have been indicated are fully brought out by these decisions. In the Bonanza Creek Gold Mining Company case the Lord Chancellor states as follows:—

"For the company, it is said, is a pure creature of statute, existing only for objects prescribed by the legislature within the area of its authority, and it, therefore, restricted, so far as legal capacity is concerned, on the principle laid down in Ashbury Carriage Company vs. Riche (L. R. 7, H. L. 653)."

This case has, since 1875, been a leading decision upon questions of company law. It laid down the doctrine of *ultra vires* and held that a company incorporated under the Companies Act of the United Kingdom, 1862, was a statutory company and that such a company had no capacity to enter into any transaction beyond those set out in the memorandum of association, which is equivalent to the Letters Patent of a company incorporated under the Dominion Act. It is a matter of comment that this decision in the House of Lords reverses the decisions in the Exchequer Chamber upon which the Judicial Committee relied in coming to their conclusion in the Bonanza Creek Mining Company.

Their Lordships go on to comment upon the effect of the decision just referred to, as follows:—

Exists Only for Specific Reason.

"Their Lordships, however take the view that this principle amounts to no more than that the words employed to which a corporation owes its legal existence must have their natural meaning, whatever that may be. The words of the British Companies Act were construed as importing that a company incorporated by the statutory Memorandum of Association which the act prescribes could have no legal existence beyond such as was required for the particular objects of in-

corporation to which that memorandum limited it. A similar rule has been laid down as regards companies created by special act. The doctrine means simply that it is wrong, in answering the question what powers the corporation possesses when incorporated exclusively by statute, to start by assuming that the legislature meant to create a company with a a capacity resembling that of a natural person, such as a corporation created by charter would have at common law, and then to ask whether there are words in the statute which take away the incidents of such a corporation. This was held by the House of Lords to be the error into which Blackburn, J., and the judges who agreed with him had fallen when they decided in Riche vs. Ashbury Carriage Company (L. R. 9 Ex. 230) in the court below that the analogy of the status and powers of a corporation created by charter, as expounded in the Sutton's Hospital case (10 Coke, 1), should in the first instance be looked to. For to look to that analogy is to assume that the legislature has had a common law corporation in view, whereas the wording may not warrant the inference that it has done more than concern itself with its own creature. Such a creature, where its entire existence is derived from the statute, will have the incidents which the common law would attach if, but only if, the statute has by its language gone on to attach them. In the absence of such language they are excluded, and, if the corporation attempts to act as though they were not, it is doing what is *ultra vires* and so prohibited as lying outside its existence in contemplation of law. The question is simply one of interpretation of the words."

Attention must again be drawn to the important distinction which the Judicial Committee of the Privy Council has drawn between the judgments of the House of Lords and that of the Exchequer Chamber in Riche vs. Ashbury Carriage Company. While the committee approves and follows the judgment of the House of Lords so far as English companies are concerned, this judgment is not followed as applicable to Canadian companies. The judgment of the Exchequer Chamber is followed with respect to Canadian companies, although it was overruled in the House of Lords in its application to British companies.

Their Lordships in the Judicial Committee in this judgment have held that a company incorporated under either the Dominion and the Ontario Companies Acts is not solely attributable to these statutes; That, in fact, a prerogative right of the Crown to incorporate companies rested in the Governor-General as regards the Dominion, and the Lieutenant-Governor as regards the province of Ontario. A common law company or chartered company was established by the prerogative of the Crown; in fact, it is ancient law that corporations could be created only by the sovereign authority. The difference, therefore, appears to be that the chartered company under prerogative of the Crown, and the company with limited capacity has its origin in the statute which creates it Such a company is limited to the purposes and objects which are expressly set out, the chartered or common law company having no such limitation. The effect of the decision is that companies incorporated under the Dominion and Ontario Acts are common law companies with statutory limitations; that is, the method with which they may carry on their business is regulated by statute. Their methods of holding meetings, passing by-laws and carrying on other similar transactions are regulated by statute and not by the common law, as the chartered or common law company is

In further explanation of this, their Lordships proceed:—

"For the statute may be so framed that executive power to incorporate by charter, independently of the statute itself, which some authority, such as a Lieutenant-Governor, possessed before it came into operation, has been left intact. Or the statute may be in such a form that a new power to incorporate by charter has been created, directed to be exercised with a view to the attainment of, for example, merely territorial objects, but not directed in terms which confine the legal personality which the charter creates to existence for the purpose of these objects and within territorial limits. The language may be such as to show an intention to confer on the corporation the general capacity which the common law ordinarily attaches to corporations created by charter. In such a case a construction like that adopted by Blackburn, J., will be the true one."

The construction referred to is that adopted by Blackburn, J., in the judgment in Riche vs. Ashbury Carriage Company, the judgment in Exchequer Chamber, which was, in fact, overruled in the House of Lords by Ashbury Carriage Company vs. Riche. As stated, the Judicial Committee of the Privy Council have adopted the reasoning of Lord Justice Blackburn in the Exchequer Chamber as applicable to a Canadian company, although, as a matter of fact, that judgment was overruled in its application to a company incorporated under the British Act of 1862. The effect of the decision is that that judgment is a good judgment as applied to a company under the Dominion or the Ontario Companies Act, but it is not applicable to a company under the Companies Act of 1862.

Since further insight into the subject may be obtained in comparing pertinent remarks in both these judgments with regard to the authority of directors and the capacity of companies. Lord Chancellor Cairns in the House of Lords says as follows:—

"With regard, therefore, to the memorandum of association, if you find anything which goes beyond that memorandum, or is not warranted by it, the question will arise whether that which is so done is *ultra vires*, not only of the directors of the company, but of the company itself. With regard to the articles of association, if you find anything which, still keeping within the memorandum of association, is a violation of the articles of the association, or in excess of them, the queston will arise that is anything more than an act *extra vires* the directors, but *intra vires* the company."

This indicates that for all purposes and under all circumstances the authority of the directors and the capacity of the company may not be coterminous and these respective capacities is a matter for investigation in each case.

"But, my Lords, if the shareholders of this company could not *ab ante* have authorized a contract of this kind to be made, how could they subsequently sanction the contract after it had, in point of fact, been made? I endeavored to follow as accurately as I could the very able argument of Mr. Benjamin at your Lordships' Bar on this point; but it appeared to me that this was a difficulty with which he was entirely unable to grapple. He endeavored to contend that when the shareholders had found that something had been done by the directors which ought not to have been done, they might be authorized to make the best they could of a difficulty into which they had thus been thrown, and therefrom might be deemed to possess power to sanction the contract being proceeded with. My Lords, I am unable to adopt that suggestion. It appears to me that it would be perfectly fatal to the whole scheme of legislation to which I have referred, if you were to hold that, in the first place, directors might do that which even the whole company could not do, and that then, the shareholders finding out what had been done, could sanction, subsequently, what they could not antecedently have authorized."

Lord Cairns here deals pointedly with the ground on which the judgment of Blackburn, L. J., were disapproved of by the House of Lords. The judgment of the Judicial Committee of the Privy Council in the Bonanza Creek Mining Company case reverses this with respect to Canadian companies and a conclusion directly opposite to that of Lord Cairns is the one which should be adopted. When the directors have entered into a contract beyond their authority the shareholders may approve and make it binding.

(To be Continued.)

EIGHT-CENT RATE FOR MUNICIPAL HAIL INSURANCE

Eight cents an acre, the lowest rate ever imposed for municipal hail insurance in Alberta, has been agreed upon as the rate to be levied on land in crop this year under the operation of the municipal hail insurance system of the province.

The board is now meeting in the city and after going through all the reports and claims for losses has fixed its acre rate, which is additional to the flat rate provided by law at five cents an acre. The total losses for the year were found to amount to slightly over $158,000, the lowest for any of the five years since the system has been organized. Last year's losses were $468,879, and the acre rate was 35 cents. The flat rate of five cents per acre applies to all assessable land in the hail insurance district.

The newly appointed board of directors of the Canadian Northern Railway has been making a tour of the west. Among the plans so far developed is that of co-ordinating to a greater extent the eastern and western lines of the road.

SATISFACTORY CONDITIONS AT REGINA

Many Surprises in Thrashing Returns—Loan Companies Report Active Demand for Money

(Staff Correspondence.)

Regina, October 12th.

Actual crop returns in the Regina district are much better than was anticipated. Some localities will not even get their seed back, while others are running as high as 35 and 40 bushels to the acre. There is no need to be pessimistic about the outlook in Saskatchewan; the rains that came even as late as August were in time to save the crop in many instances. In discussing the situation, Mr. H. W. Givens, of the Huron and Erie Mortgage Corporation, Regina, who is in close touch with prevailing conditions, said:—

Demand for Loans Revives.

"Regarding financial and other conditions in Saskatchewan, there is at the present time a very active demand for mortgage loans, and a majority of the large lending companies operating in Saskatchewan are receiving numerous applications and securing a large volume of desirable business.

"One of the chief causes for activity in mortgage loans is the failure, or part failure, of the crops in some of the western parts of the province. Part of the demand, however, is the result of the recent changes in the Dominion Lands Act, which provide for the issue of a certificate of recommendation to a settler after he has completed all duties, such as residence, cultivation, etc., except the payment to the government of the purchase price, and after receiving such certificate he may borrow money on the security of or otherwise deal with his land. Many farmers are taking advantage of this amendment and obtaining title to their lands, borrowing the money to pay up the purchase price and other claims as well; in other words, consolidating and centralizing their indebtedness.

"In the areas where crops are very poor quite a few farmers are borrowing to clear up their liabilities and provide working capital to carry on operations next year. The funds for these objects they expected to obtain out of the proceeds of their crops of 1918. I visited a number of the districts which were rather badly hit this year by drought and frost, and, while conditions are far from satisfactory from the farmers' standpoint, it should not be imagined that there was any considerable element of discouragement. The farmer, after his hard work and heavy expenditures for seed and cultivation, is, of course, disappointed, but it is disappointment, not discouragement or disheartenment; in fact, in all these districts one can see evidences everywhere that the misfortunes of this year have but stimulated the farmer to greater efforts, and in many cases brought about better methods of farming. One cannot visit these districts without being impressed with the large amount of land summer-fallowed and being put in the best possible state of cultivation in preparation for better crops next year.

Most Farmers are in Good Condition.

"It should be remembered that most of the districts where crops are poor this year had exceptionally good crops in 1915 and 1916 and fairly good crops in 1917, so that, generally speaking, the farmers in these districts are in an excellent position, financially, to stand a reverse. Out of the proceeds of the good crops of the past few years their farms have been developed; larger areas have been brought under cultivation and substantial farm buildings erected. Their farms, therefore, provide a very desirable security, from the mortgage companies' standpoint.

"Referring to the other districts in Saskatchewan where conditions are more favorable, particular mention might be made of the districts surrounding Regina and Moose Jaw and the territory south of Regina, including the Soo Line district, the Grand Trunk boundary line and the Arcola line. Throughout the most of this territory crops are very good, indeed, and a great many farmers who have recently thrashed have yields of from 25 to 30, and in not a few cases 35 and occasionally 40 bushels of wheat per acre. Oats throughout this district have also yielded well, although some of the late oats were slightly touched by frost. Saskatchewan wheat this year is an excellent sample, nearly all of it grading No. 1 northern.

"Many of the best farmers from the Regina plains, whose crops again this year will be very profitable, are acquiring more land, and recently there have been numerous sales of quarter-sections and half-sections to the owners of adjoining lands at prices ranging from $50 to $65 per acre, with an occasional sale at a considerably higher figure."

INVESTIGATING PRICES

New cost of living regulations have been laid down by the government on the recommendation of the minister of labor. Wider in their scope than the existing regulations, they provide for extended facilities of investigation; publication of fair prices; prosecution by a municipality or the minister of labor, if deemed necessary, in addition to the present method of prosecution by provincial attorney-general; the inclusion of rental as a subject of investigation and power, under a general clause, to proceed against hotels and restaurants which sell necessaries of life at a price higher "than is reasonable and just."

The council of each municipality is authorized to appoint a committee of two or more of its officers, to be known as the Fair Price Committee. The names of the committee are to be submitted to the minister of labor who will authorize it to investigate.

The amount of any necessary of life held for sale in the municipality at any time; the time when acquired; the cost within the municipality of such necessary of life, including all charges; the price at which the necessary is held for sale; the sale price which in the opinion of the committee would be a just and reasonable one; amount of wastage or destruction and the reason for same; fair rental value of any dwelling held or offered for rental within the municipality.

For such purposes, the committee is to have the powers of a commissioner appointed under the provisions of Part I. of the Inquiries Act.

ST. JOHN MAY BE FEDERAL PORT

Speaking before the Canadian Club in St. John, N.B., on Saturday, October 5th, Hon. C. C. Ballantyne, minister of marine and fisheries in the Federal Cabinet, said that, following representations made by the St. John Federal members, the city council and others to the effect that the government should take over the port of St. John as one of the country's most important national ports, he was heartily in sympathy with the project, and would recommend its adoption by the government at the next session of parliament. At present the harbors under the control of the department of marine and fisheries are Vancouver, Montreal and Quebec.

In connection with steel shipbuilding in Canada, the minister said that the $5,000,000 mill at Sydney now under construction for the manufacture of 250,000 tons of ship's plates would, he expected, be completed, and rolling ship's plates, by next July. Canada's annual output of steel ships was 250,000 tons, and the government had under consideration 22 steel ships aggregating in cost $25,000,000, while the number of ships under construction next year would be considerably larger, and would cost approximately $35,000,000. Sizes would range from 10,500 tons, 8,100 tons, 4,350 tons to 3,750 tons dead weight, and these ships would be owned and operated by the Canadian government. There would be ready for sea this fall two ships, possibly four, of 8,100 and 4,350 tons.

He understood that St. John was contemplating the erection of a steel shipbuilding plant, and assured his audience that the government stood ready and willing to give whatever company started in the port, contracts on the same basis as Halifax or any other yard in Canada.

The policy of the government, Mr. Ballantyne stated, was confined to steel ships only, though contracts for approximately 100 wooden ships from 2,500 to 3,000 tons had been awarded up to the present time. He regretted that it was not possible for the government to grant permission to construct ships for allied or neutral registry, owing to the difficulty that is being experienced in securing the necessary quantity of ship plates required under its own programme.

The "Canadian Forward," a weekly socialistic paper, edited by Mr. Isaac Bainbridge, has been suppressed by the Canadian censor. Mr. Bainbridge has gone to Ottawa to try to have the order rescinded.

PACIFIC OCEAN TRAFFIC

Pacific Steamship Company Plans for Increased Activity —Traffic is Growing

As a result of the success attending its operations to the Orient during the last year, the Pacific Steamship Company has announced further developments which will increase the Pacific Coast's foreign trade with the Far East by many million dollars annually.

The plans, as announced by General Manager A. F. Haines, involve not only an addition in ships on the Puget Sound-Far Eastern route, but an extensive increase in the company's representation in the Orient. Arrangements are being made for the company to establish its own offices in Hongkong, Yokohama, Kobe, Manila, Singapore, Vladivostock and other ports.

Mr. John J. Gorman, for years with Dodwell and Company in Seattle, and one of the best informed foreign trade experts on the Coast, has been appointed to be general agent in entire charge of operations and traffic in the Orient, with headquarters at Hongkong. He will relieve Mr. H. K. Laidlaw, who has been the Pacific Steamship Company's personal representative in the Orient during the last six months. Mr. Laidlaw will return to the company's Seattle office.

Mr. Hugh Gallagher, a well-known representative of the company, has left Seattle for New York to relieve Mr. R. D. Pinneo as general eastern agent. Mr. Pinneo, who was formerly foreign freight agent, will return to Seattle immediately, and thence proceed with Mr. Gorman to the Orient to increase the number and co-ordinate the company's chain of offices. They will sail this month.

In several ports where other companies have been acting as agents for the Pacific Steamship Company the latter will establish its own offices, thus giving it a complete personal representation in the Orient. Mr. Gorman will take with him to Hongkong a complete office force from Seattle.

Mr. Haines also announced that Mr. E. E. Johnson, general foreign agent at Seattle, will leave for the Orient in a short time to renew old acquaintances in the Far East and familiarize himself with current trade conditions.

New Vessels to be Added.

The Pacific Steamship Company now has three vessels operating in the freight and passenger business to the Orient —the "Senator," "Admiral Mayo" and "Admiral Sims." Mr. Haines stated that at least three other vessels would be added as soon as they could be obtained for this trade.

"Our offshore activities," said Mr. Haines, "will not decrease our attention to the coastwise service. On the contrary, our operations between Alaska, Puget Sound and California ports will be improved as rapidly as conditions justify. We have the largest fleet flying the American flag on the Pacific, and it is our determination to do our part to help establish the American merchant marine on a big and permanent basis in the foreign trade. Mr. H. F. Alexander, president of our company, is now in New York, where he is taking up the details of our further developments."

HUGE DEBT, MORE REVENUE AND POPULATION

Speaking in the Dominion Theatre in Ottawa on September 29th, Hon. T. A. Crerar condemned the policy of allowing Canada's natural resources to be made the football and toy of speculators and profiteers, and said it was our problem to make this land accessible to the people. He said the timber industry would have to be developed, and it was pretty near time to consider re-forestation.

In discussing the high cost of living, Mr. Crerar avowed himself an advocate of the co-operative system. He placed himself on record as being not only in favor of government ownership of railways, but government ownership of telegraphs and express companies. Referring to the need of increased revenue, he predicted a national debt after the war of $2,000,000,000, and to pay this—interests, pensions and other war expenditures—Canada would have to have an annual revenue of $[illegible]. The only way to get this was by bigger population and more capitalization of natural resources. Mr. Crerar closed his speech by pleading for a higher toned citizenship and more interest in public affairs.

AGRICULTURAL CONDITIONS IN ONTARIO

Wet Weather Has Helped Corn Crop and Pasture, but Damaged Buckwheat to Some Extent

The following is a summary of reports made by agricultural representatives to the Ontario Department of Agriculture:—

The corn crop has come through the season surprisingly well. The wet weather increased the growth of stalk considerably, and while in most sections the leaves were killed by light early frosts, the ears continued developing to a most satisfactory degree. In fact, the general opinion is that unless cutting is further delayed by rainy weather, there will be full supply of nutritious corn ensilage. Most of the husking corn in the south-western counties was got in unharmed.

The seeding of fall wheat is still proceeding. That which is up looks very promising, especially early sown, which has a good top. This is particularly the case in the premier fall wheat county of Kent.

Brant reports the fall weather as having been too catchy for beans, some of which are still in the fields, which is likely to affect the color and market quality. The yield, however, will be fair.

In some localities buckwheat is also suffering from the wet weather. Essex reports that tomatoes are yet being delivered to the factories in fair quantity.

Cattle are still putting on flesh on the good fall pastures and are likely to go into winter quarters in good condition. Kent reports feeders being purchased at 11 cents a pound, and in Lambton six carloads of stockers arrived from western points during the week. Milch cows are in strong demand, but are comparatively scarce. The York representative states that a number of milking machines are being put in by dairymen. Dufferin and York report a good number of hogs coming along. Prices generally have slightly fallen during the week. Poultry are also in good supply and in fair demand.

The marketing of grain has become more active, but less hay is being disposed of. Fodder supplies generally are sufficient for the winter, and are being helped out by the excellent late pastures. Wet weather has been delaying the harvesting of fall crops, although some progress has been made in lifting roots. Corn cutting and silo filling are also taking up much labor. Fall ploughing is about two-thirds done, generally speaking, but some farmers are reported as having already exceeded last year's area.

UNITED STATES RAILROAD OUTLOOK

Commenting upon the present position of United States railways, Spencer, Trask and Company, in their market letter of September 30th, say:—

"The railroad contract, which was at last announced as drawn up, probably helped to stabilize matters. After eight months of negotiation between the government and the railroads, a contract was prepared, and has since been approved by a very large majority of the lines of the country. On the whole it is considered moderately satisfactory, although in certain vital respects it falls short of what had been expected. These are times, however, when likes and dislikes count for little, and one can but hope, therefore, that where actual practice discloses glaring injustices, proper remedies or modifications of the law will be permitted. Meanwhile, railroad earnings are beginning to show substantial increases, thanks to the higher freight and passenger rates which went into effect on July 1st. A recent compilation shows that gross earnings in July had increased over 1917 by 34 per cent., and net by over 31 per cent.

"This is the first actual ray of light there has been in the railroad situation in a long time, and comes at a most opportune moment, as the results for the first six months of the year had been decidedly poor. The rising costs of transportation and material have been referred to so frequently of late years that they represent no new argument for the recent raise in rates. The report of the Baltimore and Ohio Railroad, just issued, emphasizes how great was that need, and how heavily costs have increased. Between 1910 and 1917 the average wage of labor advanced fully 40 per cent.; the average price of 43 principal items over 76 per cent., and the cost of fuel more than 100 per cent."

Help Others to Help the Nation

How necessary it is that the Victory Loan 1918 should be a splendid success needs no demonstration to men in touch with the business and financial situation in Canada.

Upon the success of Canada's Victory Loan 1918 depends the continuation of Canada's splendid war effort and the business prosperity which is so essential to that effort.

Every business man can help to make the Loan a success by constituting himself a committee of one to influence others to buy Victory Bonds.

A suggestion here, a word there, a little explanation, a little help to those who do not understand—in a score of ways, each business man can make himself a centre of Victory Bond influence in his own community.

It is not only a privilege but a patriotic duty for every business man to do this.

Buy and Help Others to Buy Victory Bonds

Issued by Canada's Victory Loan Committee
in Co-operation with the Minister of Finance
of the Dominion of Canada.

MUNICIPAL BOND MARKET

The Monetary Times Weekly Register of Mun'c'pal Activities and Financing

Sorel, Que.—Messrs Versailles, Vidricaire and Boulais, of Montreal, have purchased a block of $75,000 6 per cent. 5-year bonds at 95. The proceeds will be used for waterwork purposes.

Brandon, Man.—The sale of the city debentures for the hospital building fund has been successfully made, $28,000, realizing $22,140.20, a more reasonable rate than the province of Alberta had secured on a $2,000,000 flotation.

New Westminster, B.C.—Acting on the recommendation of Alderman Johnston, chairman of the finance committee, the city council decided to accept the offer of the Lumbermen's Trust Association, of Portland, Ore., for the purchase of $100,000 worth of the city's bonds, and a sixty-day option on another $70,000 worth. The offer calls for the disposing of the $100,000 at 91 with accrued interest and the exchange on foreign money, which makes the bonds worth a small fraction over 93. The money is to be exchanged in New York. The sale has been authorized by the United States government and by the local manager of the Bank of Montreal, and by the bank's head manager at Montreal. At the same time the counsel decided to withdraw the offer from Messrs. Wood, Gundy and Company, at Toronto, as the time of that company's option was up on August 31. The offer of the Lumberman's Trust Association is practically the same as that of Wood, Gundy and Company. If the Lumbermen's Trust decides to take the other $70,000 worth, it is quite likely it will take the remainder of the treasury notes or a balance of nearly $200,000. The Wood, Gundy Company had previously taken $100,000. The original issue was $466,000.

SASKATCHEWAN LOAN DISAPPOINTING

The Saskatchewan loan of £650,000 5¾ per cent. bonds, to replace 4½ per cent. debentures, had a disappointing reception The underwriters will have to take up 40 per cent. of the loan.

UNION OF PARIS FIRE INSURANCE COMPANY

The net premium income for 1917 of the Union of Paris Fire Insurance Company was $6,136,055, or over one-half million more than during the previous year. The fire and general reserve fund was increased by $410,000, that is, from $5,530,000 to $5,940,000. The company's capital is $2,000,000, only 25 per cent. being paid up. In addition to the capital and the reserve fund, there is also a balance in profit and loss account of $113,267.

The Union was founded in 1828, and is, therefore, one of the oldest fire companies in existence. It is purely a fire office and the total losses paid so far have amounted to over $100,000,000. The assets now total $15,547,788. In addition to the reserve mentioned above, there is also a provident and pension fund totalling over $1,000,000.

For the year 1917 the gross losses were $4,428,056, or about 54 per cent of the premium income. The net commission and agency expenses were $1,503,080 The company's Canadian office is in Montreal under the management of Mr. Maurice Ferrand Mr. Ferrand, however, is on active service Out of 200 of the company's head office staff which have served in the military forces, 27 have been killed. 71 wounded, 4 are missing and 61 have been mentioned in despatches

The second shipment of gold from Russia to Germany has arrived at the German frontier and has been taken over by an official of the Reichsbank, according to a Berlin despatch. Despatches on September 11 reported the shipment of the first portion of the Russian war indemnity to Germany and its receipt by a Reichsbank representative at the German border line. It was stated in an agency message from Copenhagen that the shipment amounted to 250,000,000 roubles, one-half of which was in gold and the remainder in notes

LOAN PRICE HIGHER THAN LAST TIME

In opening the campaign for the 1918 Victory Loan, Sir Thomas White, speaking in Winnipeg on October 7th, said:—

"Canada to-day is in the fortunate position of issuing her second Victory Loan at a time when the securities of the first Victory Loan stand above their issue price to the public. The best future customer is the pleased customer of the past. What an advantage to Canadian finance after the war if, as was most probable every holder of Canadian bonds would see them quoted on the market at a premium over their issue price. No matter what happened abroad Canada would be in such circumstances able to carry on her further financing within her own frontiers. The rate of interest upon the new loan is most attractive to all. This is a case where each subscriber in helping Canada would also benefit himself. The fact that the great body of Canada's war loans will be held by our own people was one of the strongest factors in our economic situation. If Canada had been obliged to borrow her war expenditure abroad the result would have been most serious to the future of the Dominion. Prudence enjoins upon all to-day the duty of saving their money for the period of readjustment, which will follow in the wake of the war. What better investment for this money than a bond of Canada backed by all its resources joined to the industry, intelligence, and enterprise of the great Canadian people? Over two hundred million dollars of last year's Victory Loan was furnished by eight hundred thousand subscribers of amounts of five thousand dollars and under. Subscribers of from five thousand to one hundred thousand took eighty millions. Over one hundred millions were in subscriptions of one hundred thousand dollars and over. This year we shall expect at least five hundred million dollars from over a million subscribers. Canada's domestic war issues have been so made that their maturities, extended over periods of five, ten, fifteen and twenty years, will not give serious difficulty to future governments.

"To have adopted the principle of short-date financing in the expectation that the war would not last long would have been a fatal error, as the principal of large issues would have fallen due at a time when immense sums of new money would be required. Short-date financing is always dangerous. The way to make the winter pass quickly is to discount a three months' promissory note in January. In public finance it is always sounder, when future conditions are uncertain, to boldly face the interest rates, and spread maturities over long periods. The outlook for the success of the Victory Loan is most promising. The savings deposits in our chartered banks materially exceed those at the same period of last year. Agriculture is prosperous and business active. Wages are high and there is no unemployment. The national spirit is strong and resolute for the continued prosecution of the war. Canada will never falter until the purpose of the allies is accomplished and Prussian militarism with all that it stands for, is utterly overthrown. On all fronts our armies are victorious. The way may still be long, but the issue is not in doubt. We begin to see the goal of all our efforts and sacrifices. This is in very truth a victory loan and there is no doubt as to the response to its appeal to the Canadian people."

WINNIPEG'S FORM OF GOVERNMENT

Abolition of Board of Control is Suggested and City May Revert to Administration by Committees of Council

In view of the present discussion of civic government in the city of Winnipeg, the Citizens' Research League, a local organization devoted to the study of municipal questions, has issued its bulletin No. 14, dealing with methods of civic administration. The pamphlet describes the form of government of Winnipeg, and also discusses municipal experience in the commission form of government and its different advantages. The pamphlet says in part:—

The municipal government of Winnipeg (a city of 185,000 population and with an annual expenditure of well over $7,500,000 on current account, including operation of public utilities) rests ultimately with something under 55,000 qualified men and women electors, of whom over 6,500 are non-residents.

The mayor is chief magistrate and head of the city's government. As such he is presiding officer of the city council (the legislative body) and chairman of the board of control (the administrative body and finance committee of council).

The city council (the legislative body) consists of the mayor and four controllers, elected annually by the city at large, and fourteen aldermen, two representing each of the seven wards of the city.

The council's general jurisdiction is that of a legislative body, though administrative powers also rest ultimately with it. Subject to charter restrictions, it may make, amend or repeal regulations and by-laws relating to civic government generally.

Standing committees (and also special committees) are appointed by council from its members, to which it delegates its powers and duties, with the provision that no reports or orders of such committees (except such orders as may be authorized by by-law or resolution) shall have effect until subsequently considered and adopted by the council.

The board of control (the administrative body and finance committee of council) consists of four controllers, together with the mayor, who is chairman of the board.

The detailed administration of civic affairs rests with the board of control, with certain exceptions, among which are public schools, the police, sinking fund and public parks. As an administrative body, it is its duty to carry out the orders of council (the legislative body), and for that purpose to direct and control all heads of departments in the execution of the duties of their office.

Boards and Commissions.

The public school board has complete jurisdiction within its own sphere. It is made of fourteen elected members, two from each ward, one from each being elected annually for a two-year term.

The board of police commissioners consists of the mayor, two aldermen appointed annually by council, the senior judge of the county court of Winnipeg and the police magistrate of the city. These commissioners have charge and control of the police department of the city and all matters connected therewith.

The public parks board controls and supervises the city's parks. It is composed of the mayor, two members of council (one of them being the chairman of the works and property committee) and six ratepayers appointed by council. The board of sinking fund trustees administers the city's sinking fund, independent of interference by the council. The social welfare commission administers relief, care and advice to deserving needy residents. The civic charities endorsement bureau examines into bona fides of charitable organizations seeking civic grants or support from the general public. The hospital commission controls and operates the Municipal Hospital. The playgrounds commission operates and directs civic recreational centres and activities. The board of valuation and revision passes upon property assessments. The Winnipeg and St. Boniface harbor commission is a joint body concerned with water frontage development and regulation. The Greater Winnipeg water board has charge of the carrying out and operation of the work of the Greater Winnipeg Water District.

In 1901 the people of Galveston, Texas, in the period of confusion which followed when the city was nearly destroyed by a tidal wave, petitioned the legislature to place the administration of municipal affairs in the hands of a small board of business men. In response the legislature created a commission of five, three to be appointed by the governor and two to be elected by the voters. As it was held to be unconstitutional for the state authorities to appoint city officers, the act was amended in 1903 so that all the members of the commission should be elected by popular vote. Although adopted at first merely as a temporary expedient to meet a serious emergency, the new plan soon attracted notice in other municipalities, and is now in force in one form or another in 350 or more cities.

Canadian Examples.

St. John, N.B., and Lethbridge, Alta., are two Canadian cities which have closely followed what may be termed the typical form of commission government, both having made a start some time before the war. At the beginning of the present year, owing to the critical state of Montreal municipal affairs, the provincial government of Quebec intervened and instituted a so-called commission, composed of the city attorney, the comptroller and auditor, the city treasurer and two other members named by the lieutenant-governor-in-council. The last two are named for four years and the first three for life unless they cease to work for the good of the city of Montreal. The city council of mayor and twenty aldermen is retained, but with reduced powers. The commissioners sit in city council and have votes. The reports of the commissioners can be rejected only on a two-thirds or three-quarters vote of the aldermen. The board of control has been abolished. It will be noted that the Montreal system—retaining as it does a large council of aldermen—is not the commission plan in the usually accepted sense of the term.

A brief and clear description of the straight commission form of government prevailing in Lethbridge, Alta., is given herewith in the exact words of Mayor Hardie, of that city:—

"It consists of three commissioners as follows:—

"The mayor, who is commissioner of finance and public safety (fire and police). The charter describes him as the chief executive officer, and gives him considerable control over other departments as well as defining his own duties. However, the office of mayor as such, is practically done away with, excepting, perhaps, that he still holds the title and performs the honorary functions that are always attached to that office in all Canadian cities.

"The commissioner of public works. This department controls the general work of the city done under the engineering department and public buildings.

"The commissioner of public utilities. This department controls all income-bearing, municipally-owned utilities of the city.

"Each commissioner is elected directly to the office he fills by the voters. The term is for three years, and it has been arranged that one commissioner comes up for election each year.

"Each commissioner is given a very free hand in the management of his department, but each commissioner is nevertheless directly responsible for the management of his department to the people through the initiative, referendum and the recall, as well as at election and to his fellow-commissioners in council.

"The civic government in all its details is invested in the three commissioners. The commissioners collectively form the council for legislative purposes and for the control of the general policy of the city administration."

GRAND TRUNK RAILWAY ISSUE

Subscriptions were received in London, England, up to September 17th, for an issue of £3,000,000 of 6 per cent. three-year notes of the Grand Trunk Railway Company. The notes are secured by the deposit with trustees of £5,000,000 of Grand Trunk perpetual 4 per cent debenture stock. They were issued at 99 yielding about 6⅜ per cent. The company had £2,000,000 of five-year secured notes which had been issued in 1913 to meet, and the additional amount was required to meet other outlays.

Robert Patterson has been appointed captain of the teams for the Victory Loan campaign in Stratford. Arrangements are being made for a house-to-house visitation, and it is expected that the city will subscribe over a million dollars.

THRASHING IN THE WEST

Returns Better Than Expected—Fall Outlook Good—Demand for Farm Land

(Staff Correspondence.)

Brandon, Man., October 10, 1918.

Thrashing is in full swing all over the west, and already completed in some localities. In the Brandon district returns are generally satisfactory, and better than was at first expected. Wheat is averaging in the neighborhood of thirteen bushels to the acre, and some returns report as high as twenty bushels to the acre, while, on the other hand, many returns show only four and five bushels. Merchants report good business on a cash basis. Judging by the line of motor cars on Rosser Avenue, Brandon, any week-day evening, the writer would say retail trade was exceedingly good. In a talk with Mayor Cater, he was well satisfied with conditions prevailing in the city. Fifty per cent. of the present year's taxes are already in, be states, and arrears also are exceedingly well paid up. Mayor Cater believes the coming Victory Loan will be liberally supported by Brandon citizens, and thinks the returns will show good subscriptions from the farmers of the district.

In discussing present conditions with Mr. A. E. McKenzie, prominent seedsman of Brandon, and one of the best-informed men in the three prairie provinces, he said:—

‘Trade conditions generally throughout the prairie provinces will compare as favorably as almost any year during the past three. Local conditions in spots have to be reckoned with, as is the case every year. The Canadian west represents such an enormous stretch of country as to render diversified conditions each year. There is undoubtedly a shortage of feed for live stock throughout each of the three provinces. On the whole, Manitoba is doubtless better situated than Saskatchewan or Alberta. The fact that there has been a fair crop of coarse grains in Manitoba and Saskatchewan will help the situation in a degree. As the crop for all cereals is below normal, all grains, with the possibe exception of wheat, should bring a higher price to the producer than the current market quotations. When wheat is worth $2.24 per bushel, Fort William, there is no doubt that a bushel of barley or rye is worth more money, but the values of these two cereals are largely controlled by the large crop which has been produced in the United States. The prices for oats of almost any grade will be high throughout the entire year, as the crop is an abnormally short one.

"Collections compare very favorably with any year in the past three, and the fact that wholesale houses this fall will be able to collect a high percentage of their outstandings will assist in stimulating booking of new fall business, and will have a vitalizing effect which will make itself felt until another crop is realized. Shorter terms of credit by wholesale houses has had a splendid effect, and doubtless the experience gained, both by the large jobber and the country merchant trade in this respect is such that the prospect of reversion alter the war to long terms of credit will not receive a very good reception. The very life of business is the prompt turn over of capital.

"Speaking of Manitoba, there is no doubt that the allotment to the Victory Loan will be fully subscribed. Such cities as Winnipeg and Brandon will doubtless do their full share. There are many rural districts, throughout this province in particular, where farmers as a class will be in a position to take their patriotic share of the national obligation. While this is true of many districts, there are other districts where leniency will have to be exercised. The key to the success of the third Victory Loan is organization."

Demand for Farm Lands.

In discussing this situation, Mr. Geo. Williamson, of Brandon, a large dealer in farm lands, informed *The Monetary Times* that there was a brisk demand for Manitoba farm lands at the present time, with prices ranging from $25 to $100 an acre, the latter in the Dauphin district. The day the writer was in Mr. Williamson's office he had sold two farms, one a large ranch of 20,000 acres, and the other a half-section, which had sold for $52.50 an acre. Mr. Williamson drew attention to a truck farmer near Brandon, who this season had grown 75,000 head of cabbage, for which he received eight cents per head, 2,500 bushels of turnips at 75 cents a bushel, and 2,400 bushels of potatoes at 75 cents a bushel, all on a farm of 200 acres, and, in addition, had 40 acres in wheat, which went 24 bushels to the acre, and 40 acres of summer-fallow. This farmer, even after cost of labor, etc., will undoubtedly be looked after by the Brandon Victory Loan committee.

The board of trade was reorganized on April 25th last, with Mr. A. R. McDiarmid as president, and has been giving every attention to matters of local and national interest. A new constitution and by-lays have been adopted under the name of Brandon Board of Trade and Civics, with the formation of two divisions, the Industrial and Commercial Division and the Civic Division. The fostering of the community spirit and admission of various trades and labor organizations to the membership is receiving attention. The board have in view the advertising of Brandon as a residential city for commercial travellers and others in view of the cheaper rentals and smaller cost of living supplies in Brandon compared with other cities in the province. The continued success of the summer and winter fairs demonstrate the fact that the surrounding agricultural territory is second to none in the province, and a proposition is under consideration for the establishing of recreation facilities for visitors from the surrounding territory, permanent quarters for baseball, football, lacrosse and other games, laid out at the fair grounds, with a plunge and shower baths. The A. E. McKenzie Company, Limited, are at present making extensive additions and improvements to their warehouse, which, when completed, will very greatly facilitate the handling of the large quantities of seed grain used in their business. It is of reinforced concrete construction and fireproof throughout. The Brandon distributing area covers over 30,000 square miles, and embraces the most productive farming country of the province of Manitoba and a considerable portion of the province of Saskatchewan. Within this area there are 289 small towns, villages and hamlets, with about 3,500 retail merchants. The secretary of the board, W. L. Birnie, of the Bank of Hamilton, will be pleased to forward any information desired or to reply to any enquiries sent him.

DEVELOPMENTS AT LE PAS, MANITOBA

Events are moving faster in The Pas district of Manitoba than had been anticipated. While it is conceded that at Flin Flon, and probably at other points, there are immense deposits of copper ore, of a tenor that will necessitate local smelting, nothing was expected in the way of development until the end of the war. No one supposed it would be possible to break ground with conditions as they are.

It appears, however, that a start may be made much sooner than expected. The Hon. Edward Brown has, it is said, assured the holders of the Flin Flon property that, provided they will agree to erect a smelter at or quite close to The Pas, the government will build an 80-mile railway, connecting that place with the mine, at an estimated cost of $30,000 a mile.

What decision the owners will arrive at is unknown. Such a haul would possibly add a fixed charge for a haulage of $1 a ton while the mine was worked. If there are 25 million tons in sight, as rumor says is the case, then the extra cost would naturally be $25,000,000. But as against this, supplies and labor costs would undoubtedly be considerably less at The Pas than at Flin Flon. The working man now knows his value and will not, if he can help it, tako a job in a remote locality where the pleasures he affects are hard to come by. A careful calculation may show that the dollar a ton extra cost through the haudling and 80-mile haul, could be saved, and more than saved, by locating at The Pas.

Should this arrangement be satisfactory, it is affirmed a start can be made at once on the road and an order for all the steel required for the full distance can be placed on favorable terms. It will be a grand thing for The Pas should such a road be built. Undoubtedly fresh discoveries of copper and gold will be made, for the fringe of a vast mineral territory has been but reached, and a road projected into the heart of the mineral belt would inevitably cause many prospectors to take the field, consequently, new discoveries would come more often than has been the case.

Organization for the Victory Loan campaign in Perth is proceeding well. The objective has been set at $2,500,000, which is slightly over that of last year, when $2,000,000 was raised. Mr. C. S. Mitchell is organizer

Quebec	18,589,274	15,953,035	+	2,636,239
Edmonton	13,498,110	10,715,366	+	2,782,744
Halifax	16,910,383	11,900,985	+	5,009,398
London	9,986,936	8,900,572	+	1,086,364
Regina	13,797,739	13,609,369	+	188,370
St. John	9,314,347	7,377,827	+	1,936,520
Victoria	8,714,852	7,225,051	+	1,489,801
Saskatoon	6,587,699	7,159,430	—	571,731
Moose Jaw	5,750,429	4,688,660	+	1,061,769
Windsor	4,339,678	....		....
Brandon	2,309,380	2,476,644	—	167,264
Brantford	3,363,884	3,370,882	—	6,998
Fort William	2,764,434	2,456,349	+	308,085
Lethbridge	3,923,088	3,544,189	+	378,899
Medicine Hat	1,744,211	2,250,895	—	506,684
New Westminster	2,183,178	1,641,990	+	541,188
Peterboro	2,700,443	2,560,818	+	139,625
Sherbrooke	3,548,501	2,626,427	+	922,074
Kitchener	2,536,874	2,357,895	+	178,979
Totals	$1,041,684,362	$924,680,373	+	$112,664,311

The Toronto bank clearings for the month of September were $260,979,193, compared with $228,809,207 for September a year ago, and $196,412,726 in September, 1916.

ST. MAURICE PAPER COMPANY

The plant of this company, located at Three Rivers, and which has an output of 100 tons of newsprint, 55 tons of sulphite pulp, and 50 tons of kraft paper, has been operating at full capacity during the past year.

The statement for 1917 showed a net profit after expenses of manufacturing and administration of $1,060,853, which, after deducting $386,955 for exhaustion of timber areas, depreciation of plant and government taxes, left a balance of $673,900. Bond interest for the period of operation absorbed $78,750, leaving a net surplus of $595,150. This, added to accumulated surplus, gives an aggregate surplus of $902,000.

The largest stock interest in the company is held by the Union Bag and Paper Company, which transferred its timber limits and pulp mill previously erected to the new company for common stock. Thereupon an issue of 6 per cent. bonds to the extent of only $1,500,000 was made and used for the purpose of erecting the paper mills and providing working capital. The large equity behind the common stock constitutes a strong factor in the company's position. In fact, at the time of the organization of the company, the appraised value of the plants and properties initially acquired was reported by experts to be in excess of $3,750,000, not including the value of current assets. There has been added by the construction of the newsprint mill, sulphite and kraft plants, a value of $2,318,578, making a total for plants and properties of approximately $6,000,000, in addition to present current assets of about $2,000,000, against which there are $1,500,000 bonds outstanding and $5,000,000 of common stock. When the undistributed surplus of $902,000 is taken into consideration, which is available for marking down the value of properties and plant, it will be seen that the company's position is quite strong.

The earnings of the company during the present year have been in keeping with those of 1917, and it is expected that the annual report for 1918, when issued, will show a very handsome return on the common stock.

The stock is not listed on the Montreal Exchange and upon inquiry made to [illegible] and Company, Limited, it was brought out that beyond some private distribution in Montreal very little of the stock is held there. Sales have been made in New York and Philadelphia recently at $60 per share, which with the exchange, would be equivalent to $62.50 in Montreal.

NORTHERN BRITISH COLUMBIA GROWING

A marked increase in the influx of settlers from the prairie sections into the great fertile belt in the lake country to the south of Burns Lake in British Columbia, is reported by Mr. Alexander Manson, M.P.P., deputy speaker of the provincial legislature. He stated that the stream of prospective settlers has been steadily increasing, until to-day it has all the earmarks of a veritable stampede. Not a train comes in on the Grand Trunk Pacific, but men from the prairies, experienced in agricultural life and supplied with capital, arrive to spy out the lands for themselves and their friends back on the prairies.

To cope with this influx and make it easy for the incomers to secure the necessary information respecting lands open for settlement, and, in fact, to give them every possible assistance and encouragement, Mr. Manson advocates the stationing in that district of a government land locator. This plan he urged upon the provincial executive council at its session recently, and received the assurance that every consideration to his request would be given.

Generally speaking, Mr. Manson said, conditions in the Omineca section are satisfactory. Mining at present is somewhat quiet, but there is a great amount of prospecting work being done and a number of the big mining interests which have been operating there have their experts in the field and are persistently looking out for good properties. This activity, he says, is indicative of future development in the mining field, and when capital is more available later, he expects to see a great impetus given to the industry.

THE ECONOMIC WEAPON

"Round Table," for September, 1918, says:—

"The full use of the economic weapon during the war has met with complete approval in America, but there is no general understanding of the importance of keeping the weapon suspended over Germany's head and of threatening to continue its use indefinitely until the full aims of the Allies be secured.

"It is admitted by German economists that as a result of high taxation and of the difficulties of re-establishing normal industries there will be a marked tendency towards emigration from Germany, which, unless rigorously checked, would reach large dimensions. But the German government cannot advantageously check this normal movement unless they are able to find employment for the demobilized soldiers. If the allies refuse to open their markets and deny access to their raw materials, emigration can be stayed only at the cost of economic regression. The price will be a general decline in the standard of life, decreasing national vigour, and probably a stationary or diminishing population. If, on the other hand, Germany raises the gates and allows her people to depart they will be lost to Germany and their children to Deutschtum. In other words, if the allies make full use of the power they possess, Germany must either submit or retrograde.

"The grave situation in Eastern Europe emphasizes the value and importance of this weapon. . . . The fact that the Central Empires cut off the West from Eastern Europe is still a very serious obstacle, but it can to some extent be counteracted by economic pressure upon them. To be fully effective this pressure must, however, be world-wide in scope. Its mechanism cannot be created in a day. Systematic and permanent organization is essential if this weapon of the present League of Freedom and its lineal successor is both to secure and to maintain a satisfactory peace."

True it is that in many households injunctions to thrift are unneeded, not to say impertinent, advice. But there are very many people throughout the length and breadth of the land who have need of being so counselled. For it will be for every individual to determine how best to practice thrift and save for his own or the nation's future. One's daily outlay should be closely studied. We must forego luxuries, avoid waste, wear clothes until threadbare, restrict purchases to essentials, and be prepared to answer the country's call to lend more money when that call comes.

BRITISH TRADERS INSURANCE COMPANY

The annual report of the British Traders Insurance Company, Limited, for the year ended December 31st, 1917, shows total assets of $5,377,546. The operations of this company, which writes fire and marine insurance, extend throughout the British Empire, Japan, China and South America. The head office is located in Hong-Kong.

A balance of $650,000 remains in the working account of 1916 and $2,300,000 in that of 1917. A final dividend was paid for 1916, funds transferred to leasehold and reinsurance accounts, and a balance of $440,000 carried forward to underwriting suspense account. The net premiums for the year 1917 totalled $3,890,000, and interest to the amount of $245,000 was also received. Losses and claims paid totalled $1,465,000; after deducting this sum and other expenses the balance of $2,305,000, or about 60 per cent. of total premiums, remained. An interim dividend of $4.50 per share was declared, and also a bonus of 20 per cent. to contributors.

Over $2,000,000 of the assets are invested in British and foreign securities, payable in gold. Cash on hand totals $1,280,000 and leasehold property $1,263,000. There are also $350,000 of investments, repayable in silver, and balances due from debtors, including branch and agency balances, to the amount of $379,000. The company's capital is $450,000 (£90,000), reserve funds total $725,000, reinsurance fund $486,000, and underwriting suspense account $223,000. Provision is also made for fluctuations in exchange and in investment values by accounts having a total of $186,000 to their credit. The balance of the liabilities as shown by the balance sheet consists of the working accounts for 1916 and 1917, and amounts due to various creditors.

The general manager of this well-known company, which has completed fifty-two years of operations, is Mr. C. Montague Ede. The head office for Canada, at Toronto, is under the management of Mr. C. R. Drayton, and a branch in Vancouver is also maintained under the care of Mr. C. R. Elderton.

The Ogilvie Flour Mills Company, Limited

REPORTS and BALANCE SHEET

For year ended August 31st, 1918, presented to the Shareholders at the Seventeenth Annual Meeting, held at Montreal, Quebec, October 10th, 1918.

DIRECTORS' REPORT.

A Balance Sheet showing the Assets and Liabilities of the Company, also Profits for the year, is submitted.

The Company's accounts have been audited by Messrs. Creak, Cushing and Hodgson, Chartered Accountants, whose report is presented herewith.

The Company's Pension Fund now amounts to $253,644.91.

You will note that the amount of last year's Contingent Account has been transferred to Rest Account, and a Special Contingent Account established.

Provision has been made for the maintenance of the Company's various properties at the highest possible state of efficiency.

The usual quarterly dividends were paid during the year on the Preferred Stock, and four quarterly dividends of 3% were paid on the Common Stock, together with a bonus of 15%, which was paid on the 1st instant.

All of which is respectfully submitted.

CHAS. R. HOSMER, President.

VICE-PRESIDENT AND MANAGING DIRECTOR'S ADDRESS.

Addressing the Shareholders, Mr. W. A. Black, the Vice-President and Managing Director, said:—

It is with much pleasure that we present to our Shareholders another very satisfactory statement.

On account of our inability to secure sufficient wheat, the output of our flour mills during the past year was somewhat less than the previous year, the supply of wheat for all Canadian mills being under the control of the Food Board, which allotted to the mills a proportionate share of wheat that was available for the mills to grind.

The capacity of our cereal mills was increased during the year, the output being materially increased, and finding ready sale at satisfactory prices.

Our trading in grains and other commodities was large and profitable, and these profits, together with income from investments, give us nearly sixty per cent. of our total profits.

The turnover for the year was $56,657,117, of which $40,412,848 was on the sale of the products of our flour mills, the profits from the operation of which netted us $832,910.50, or only a shade over 2% (2.06%, to be exact), on the turnover, a figure which is, indeed, very low, and only possible of returning a reasonable profit on account of the very large amount involved. I have particularly drawn this matter to your attention because the impression seems to prevail with some that the flour profits are unduly large, which these figures clearly demonstrate is not the case.

Realizing that our business is much more subject to market changes than is generally the case, it has been the policy of your Directors to carry the large supplies required by our mills and the product of same, as also its investments, at a most safe and conservative figure, but owing to Government requirements, and feeling the advisability of our Shareholders realizing that proper provision has been made to take care of a sudden change in values, you will note that a Contingent Reserve Account has been established to provide against such a contingency. With flour and wheat from two to three times normal values, it is only natural that there should be some anxiety in the minds of our shareholders in this respect. This reserve, however, must be regarded as likely to be required for the purpose named. We profited by the advance to the present high prices, and as it is hardly possible for us to avoid some loss when normal values again prevail, and having in mind the different matters referred to in this connection, it is well that proper provision be made and shown.

We continue to contribute largely to the Income and Business Profits Taxes, our contribution this year again exceeding the dividends paid to the Shareholders of our ordinary stock. There has been practically no change in the holdings of our Shareholders during the year, the average holdings being 34 shares.

The outlook for this year is hardly as promising as last. Firstly, for the reason that the Government has felt it necessary to adopt the use of the same quantity of substitutes for flour as is used by our Allies, which means a reduction in the use of wheat flour in Canada by some 20 per cent. Secondly, the export outlook is not as bright as it was a year ago, but your Management feel confident of the maintenance of a satisfactory return to the Shareholders.

DIRECTORS AND OFFICERS.

The following gentlemen were elected Directors of the Company for the ensuing year:—

Sir Montagu Allan, C.V.O., Mr. W. A. Black, Mr. Charles Chaput, Mr. George E. Drummond, Sir Charles Gordon, G.B.E., Sir Herbert Holt, K.B., Mr. C. R. Hosmer, Sir Augustus Nanton, K.B., Mr. Shirley Ogilvie.

And Messrs. Creak, Cushing and Hodgson were appointed Auditors.

At a subsequent meeting of Directors, the following officers were appointed:—

Mr. C. R. Hosmer, President; Mr. W. A. Black, Vice-President and Managing Director; Mr. S. A. McMurry, Treasurer; Mr. G. A. Morris, Secretary.

BALANCE STATEMENT, AUGUST 31st, 1918.

AUDITORS' REPORT.

We have audited the books of the Company at Montreal, Fort William, Winnipeg and Medicine Hat for the year ending 31st August, 1918, and have obtained all the information and explanations we have required; and we certify that, in our opinion, the above Balance Sheet is properly drawn up, so as to exhibit a true and correct view of the state of the Company's affairs according to the best of our information and the explanations given to us and as shown by the books of the Company.

CREAK, CUSHING & HODGSON,
Chartered Accountants.

WORLD'S WHEAT CROP

On October 7th a cablegram was received by the Department of Agriculture at Ottawa, announcing the crop estimates for 1918 of the International Institute of Agriculture. They are as follows:—

England and Wales.

	1917.	1918.	Average of 5 yrs., 1912-16
Wheat	57,317,000	84,000,000	57,487,000
Barley	46,162,000	50,000,000	....
Oats	99,719,000	124,000,000	....
Potatoes	124,693,000	153,000,000	....

Spain.

	1917.	1918.	Average of 5 yrs., 1912-16
Wheat	142,676,000	127,983,000	125,981,000
Barley	77,957,000	84,464,000	....
Oats	31,115,000	29,113,000	....

Japan.

	1917.	1918.	Average of 5 yrs., 1912-16
Wheat	25,860,000	31,127,000	24,372,000
Barley	95,750,000	76,053,000	....

Egypt.

	1917.	1918.	Average of 5 yrs., 1912-16
Wheat	29,835,000	32,355,000	35,409,000
Barley	13,598,000	9,870,000	....

MONEY MARKETS

Messrs. Glazebrook and Cronyn, exchange and bond brokers, Toronto, report the following exchange rates to *The Monetary Times*:—

	Buyers.	Sellers.	Counter.

Demand	$4.85.40	$4.85.55	$4.87½
Cable transfers	4.86.55	4.86.70	4.88½

PRODUCTION OF BREAD IN CANADA

Slight Increase in Cost for Month of July—Statement of Costs

The reports of some 129 Canadian bakers, received by the Cost of Living Branch of the Department of Labor for July, show a small increase of 11 cents in the cost of wheat flour and flour substitutes, covering the Dominion at large, caused chiefly by the cost of substitute flours, varying in price and kind used, whether rye, corn or oat flours, the percentage used being about 90 per cent. wheat flour and 10 per cent. substitute flours.

The Dominion average cost per pound of bread for June stood at 6 73-100 cents per pound, while July figures out 6 92-100 cents, an increase of one-fifth of a cent per pound.

Analysing the distribution of costs, it is found that, owing to the decrease in quantity baked compared with June, the delivery charges have slightly increased at several points. Then, again, July is a difficult month for bakery operations, as there may be shrinkage of yield from excessive evaporation and other causes that do not influence other months and will not affect the months to follow.

Looking at the large centres of consumption the tables show slight increases of cost in the leading baking plants of Montreal, while the reports of a representative number of second capacity concerns show a fractional decrease. A similar comparison of the Toronto bakers presents about the same results.

The visible supply of excellent and approved substitute flours has increased and is selling at lower rates, so that the trade will be in a better position during the fall months to secure the needed supplies and at favorable prices, thus producing the bread supply at minimum of cost, notwithstanding the advance in wheat flour prices, caused by a higher wheat rate, advance in freight charges and a higher percentage of extraction in the milling.

Cost per Pound.

The following is an abstract statement showing the cost of flour per barrel and of producing one pound of bread for the month of July, in the leading cities of Canada:—

Locality.	Cost of flour per barrel.	Cost of 1 lb. of bread.
Halifax, Amherst, New Glasgow, Sydney and Truro	11.40	6.892
St. John, Milford and Woodstock	11.45	7.183
Montreal	11.32	7.735
Montreal (baking under 1,000 barrels)	11.16	6.905
Quebec	11.45	6.098
Sherbrooke and St. Hyacinthe	11.12	6.647
Ottawa	11.25	6.608
Toronto	11.02	6.828
Toronto (now reporting)	11.11	6.504
Kingston, Belleville, Napanee and Tweed	11.47	6.323
Iroquois and Martintown	11.34	6.441
Smiths' Falls, Pembroke and Cornwall	11.23	6.167
Sudbury and Goderich	11.68	6.814
Nattawa, New Liskeard and Copper Cliff	11.54	6.256
Barrie	11.00	6.045
Hamilton, Dundas and Beamsville	11.34	6.638
Brantford	11.13	6.556
St. Catharines, Niagara Falls and Grimsby	11.03	6.604
London, Preston and Mount Forest	10.86	6.445
St. Thomas, Chatham and Sandwich	10.96	6.647
Port Dover and Ridgetown	12.00	6.752
Windsor and Sarnia	10.77	6.459
Collingwood, Meaford and Owen Sound	10.80	6.514
Port Arthur and Kenora	10.89	6.723
Winnipeg	10.39	6.651
Medicine Hat and Lethbridge	10.30	6.644
Westminster, Victoria, Vancouver & Nelson	10.45	7.396
Dominion average	11.05	6.921

Mr. J. A. Fraser, treasurer of the Dominion Securities Corporation, has been in Prince Albert, Sask., in connection with the city's finances. Negotiations are not as yet completed between the bondholders and the city, but it is hoped that an equitable arrangement will be arrived at.

LOAN ORGANIZATION IN QUEBEC PROVINCE

Membership of Various Committees Who Will Handle Campaign in Province of Quebec

The following are the members of the provincial executive committee for the loan campaign in Quebec Province:—

Honorary chairmen for the province of Quebec, Sir Lomer Gouin, Lord Shaughnessy. Joint chairmen, A. P. Frigon, E. A. McNutt. Committee, Sir Olivier Taillon, Sir George Garneau, Sir Wm. Price, Hon. R. Dandurand, Hon. C. P. Beaubien, Hon. Geo. G. Foster, Hon. Dr. H. S. Beland, M.P., Hon. Rodolphe Lemieux, M.P., Hon. E. L. Patenaude, Hon. Geo. E. Amyot, Hon. Philippe Paradis, Arthur Sauve, M.P.P., Jos. Ainey, Alex. Bisset, Armand Chaput, P. P. Cowans, Emilien Daoust, E. M. Emery, J. H. Fortier, Edwin Hanson, H. Hudon, F. C. Laberge, J. M. Mackie, Alex. Maclaren, J. M. McCarthy, J. S. Mitchell, T. L. Morrisey, Jas. Peters, Alfred St. Cyr, J. W. Ross, H. O. Roy, N.P., Thibaudeau Rinfret, K.C., Edgar M. Smith, C. W. Tinling, P. M. Wickham. Joint secretaries, J. P. L. Stewart, L. Trepanier.

PUBLICITY COMMITTEE.

E. M. Emery, chairman; committee, G. Normand, Leon Lorrain, Raoul Clouthier, Ovide Denis; L. Trepanier, secretary.

FINANCE COMMITTEE.

A. P. Frigon, chairman: E. A. McNutt, J. W. Ross, A. H. B. Mackenzie, A. Bruneau, Edgar M. Smith, Rodolph Bedard; A. Cross, secretary.

BUSINESS COMMITTEE.

E. A. McNutt, chairman; A. P. Frigon, J. M. Mackie, A. D. Anderson, C. W. Tinling, T. L. Morrisey, A. J. Nesbitt; A. Cross, secretary.

ORGANIZATION COMMITTEE.

E. A. McNutt, chairman; A. P. Frigon, Edwin Hanson, P. P. Cowans, J. M. Mackie, R. T. Leclerc; J. P. L. Stewart, secretary.

TRANSPORTATION COMMITTEE.

A. P. Frigon, chairman; E. A. McNutt, C. W. Johnston, R. P. Niven, Wm. Hanson, H. R. Swenerton, H. R. Wood, F. W. Tofield, C. E. Arpin, F. Saint-Pierre, C. B. Hibbard, J. B. How, R. Dupont; J. P. L. Stewart, secretary.

DISTRIBUTION COMMITTEE.

Jas. Peters, H. Hudon, joint chairmen; G. Desrosiers, W. B. Tingle, H. Bernard, L. Michaud, U. Genereux, J. Love, L. J. Bastien, H. Fortier, C. Fortier, E. DeChantigny, A. Courville.

GREAT AMERICAN INSURANCE COMPANY

The capital stock of the Great American Insurance Company, of New York, has been increased from $2,000,000 to $5,000,000. The additional stock has been subscribed at $150 per $100 share, so that a total of $4,500,000 was realized. It is understood that the increase up to the total authorized by the charter is made owing to the provision limiting the amount of a single risk to 10 per cent. of the paid-up capital. Three-quarters of the new funds secured, that is, $3,375,000, were subscribed to the fourth Liberty Loan.

FURTHER CANADIAN PACIFIC APPOINTMENTS

The following appointments have been announced by the Canadian Pacific Railway:—

Mr. Allen Purvis, formerly general superintendent of the Quebec district at Montreal, has been appointed general superintendent of the Ontario district, with headquarters at Toronto.

Mr. J. K. Savage, formerly superintendent at Smith's Falls, has been appointed assistant general superintendent.

Mr. R. W. Scott, formerly assistant superintendent at Montreal, has been appointed superintendent of the Trenton division, with headquarters at Toronto.

DIVIDENDS AND NOTICES

THE CONSUMERS' GAS COMPANY OF TORONTO

NOTICE OF ANNUAL MEETING

The Annual general meeting of the Shareholders of the Consumers' Gas Company of Toronto, to receive the report of the Directors, and for the election of the Directors for the ensuing year, will be held in the Company's Board Room, 17 Toronto Street, Monday, the 28th day of October, 1918, at 12 o'clock noon.

ARTHUR HEWITT,
General Manager.

THE MERCHANTS BANK OF CANADA

QUARTERLY DIVIDEND

Notice is hereby given that a dividend of **Two and one-Half** per cent. for the current quarter, being at the rate of **Ten** per cent. per annum, upon the Paid-up Capital Stock of this Institution, has been declared, and will be payable at its Banking House in this city and at its Branches, on and after the 1st day of November next to Shareholders of record at the close of business on the 15th day of October.

By order of the Board.
D. C. MACAROW,
General Manager.
Montreal, 24th September, 1918.

McINTYRE PORCUPINE MINES, LIMITED

(No Personal Liability.)

DIVIDEND No. 6

Notice is hereby given that a dividend of 5 per cent. (5%) on the issued Capital Stock of the Company will be paid on the 30th day of November, 1918, to Shareholders of record at the close of business on November 14th, 1918. Books closed November 15th to 30th inclusive.

By Order of the Board.
M. P. VAN DER VOORT,
Secretary-Treasurer.
Dated at Toronto, October 11th, 1918.

INSURANCE MEETING CANCELLED

The Insurance Institute of Toronto has been obliged to cancel its first meeting of the season, which was to take place on the 17th instant. This is owing to the request of the medical health officer of Toronto that such meetings be cancelled. The principal features of the meeting were to be the inaugural address of the new president, Mr. H. W. Crossin, and an address by Mr. G. D. Finlayson. It is expected that Mr. Finlayson will address the institute later in the season, probably in December.

SASKATCHEWAN THOROUGHLY ORGANIZED

In Spite of Bad Crops in Some Sections, Province Hopes to Average Better Than Last Year

Saskatchewan can be depended upon to go over the top if the enthusiasm with which people everywhere are entering into the campaign is any indication of the ultimate results. Canada's big wheat growing province accomplished wonders last year. Her leading citizens in charge of the Victory Loan organization promise even bigger things this year.

Under the energetic leadership of such men as Hon. C. A. Dunning, chairman of the provincial committee, and D. M. Balfour, vice-chairman, the movement is spreading to all points of the vast prairie stretches with the rapidity of the typical prairie fire. S. W. Harris, of Regina, is secretary, and E. G. Read, assistant secretary of the provincial organization. H. W. Givins is treasurer. The provincial publicity committee is in capable hands, with J. F. Bole, ex. M.L.A., as chairman, while E. S. Miller is chairman of the special subscriptions committee. The provincial committee consists of the outstanding business and professional men of the province as a whole.

Saskatchewan, for the purposes of the campaign, has been divided into eight divisions. These divisions have been further divided into 124 sub-divisions. The campaign will be undertaken by approximately 3,000 canvassers. A vast machine is being created in the province to put the loan over and no stones are being left unturned to assure every last dollar being subscribed.

The record of the great prairie province last year in the Victory Loan campaign was remarkable, Saskatchewan standing fourth among the provinces of the Dominion. No less than $21,401,550 was subscribed to the loan by 74,580 individuals. In a country of such vast distances, and scattered settlements, the fact that one out of every eight persons subscribed to the loan was considered a splendid showing.

This year, however, the provincial committee are aiming at bigger game, and are placing the objective at one subscriber out of every five persons.

Some Parts Had Bad Harvest.

All divisional and sub-divisional committees have already been established and organization of the local committees have also been established in all the smaller centres of the province. While officials are optimistic of the results, they are not losing sight of the fact that in many parts of the province this year the crops were poor, and this will have a serious effect on the campaign in those districts. Consequently the districts which have suffered in this way cannot be expected to increase their last year's subscriptions by any large margin. In fact, it is conceded that if some portions of the province equal last year's totals, they will indeed be performing a remarkable feat.

On the other hand, other portions of the province experienced bountiful harvests this year, and these districts are expected to more than make up for the uphill fight in the drought areas, in the south-west and north-west.

The Regina and Moose Jaw divisional organizations are located in areas where the crops were, on the whole, satisfactory, and there will be keen rivalry between these two divisions.

Regina city is expected to put up a big fight to increase her last year's subscriptions. A very strong organization has been formed in the city with L. A. Thornton, city commissioner, as chairman of the executive, and backed up by many of the most prominent men in the city.

One of the most enthusiastic men in the campaign, and his enthusiasm is bounded only by his generous proportions, is R. G. McCuish, chairman of the Regina divisional organization. Mr. McCuish is one of the busiest men in the city these days, and is out all over the province addressing public meetings in the interests of the campaign.

A feature of the fight in Saskatchewan will be the publicity campaign which is backed to the hilt by all the newspapers in the province.

The Department of Finance at Ottawa has issued a blue book containing a list of the unclaimed bonds of the last Victory Loan. It is being forwarded to all branch banks and financial houses to assist in properly locating the missing securities.

SASKATCHEWAN CROP ESTIMATES

Acreage Under Wheat Has Increased by Twelve Per Cent. Over Last Year

The Bureau of Statistics of the Provincial Department of Agriculture, in co-operation with the Dominion Bureau of Statistics, have now completed their final estimates of crop acreage and livestock in Saskatchewan. The method adopted to obtain these returns was the same as followed last year—viz., cards containing questions relating to grain crops and livestock were sent to teachers in rural school districts, who, in turn handed them to the scholars, with the request that they ask their parents to answer the questions. In all 100,000 cards were distributed and about 50 per cent. were returned to the Bureau of Statistics. These cards were then arranged into crop districts and forwarded to Ottawa for compilation, and the foregoing estimates, after having been checked from the census returns of 1916 and by the Provincial Bureau of Statistics, are believed to be as nearly correct as it is possible to obtain by voluntary co-operation of the farmers of the province.

Several interesting comparisons are to be noted in these returns. The acreage under wheat has been increased from 8,273,253 acres in 1917 to 9,249,260 acres seeded this year, an increase of almost 1,000,000. In view of the fact that labor shortage has been most acute for the last two years this large increase speaks well for the way in which the farmers responded to the call for greater production. Nor have their efforts stopped during this year as the figures for new breaking testify, a total of 614,980 acres of prairie having been broken during the past season, as against 431,698 acres in 1917, and had the season been more favorable for plowing doubtless this amount would have been greatly increased. Unfortunately, the unusually dry weather experienced in June (the month that breaking is done) prevented many farmers doing as much as they intended.

It will be observed that rye is becoming more and more a standard crop each year. A few years ago the acreage sown was so small that the amount could hardly be estimated, but this year it is estimated that no less than 123,500 acres have been seeded to this valuable cereal.

The total acreage under wheat in Saskatchewan in 1918 was 9,249,260; oats, 4,988,499; barley, 699,296; flax, 840,957; rye, 123,500; peas, 4,251; beans, 861; buckwheat, 1,207; mixed grains, 23,449; other grains, 27,347. In root crops there were: Potatoes, 59,793 acres; turnips, 5,622; mangolds, 1,806; other roots, 2,332. In feed crops there were: In corn, 11,186 acres; hay, 315,117 acres; and pasture, 933,862; alfalfa, 6,943; and other crops, 40,504. The total summer fallow was 4,060,801 and new breaking 614,980. This gives a total acreage under cultivation of 22,016,139.

Mixed Farming is Increasing.

Not only in crop acreages is a remarkable increase shown, but the figures on livestock also show a most satisfactory increase, clearly indicating that while grain is still the chief source of income the farmer is turning his attention more to mixed farming than ever before.

The following estimates show the number of livestock in 1918 as compared with 1917:—

	1918.	1917.
Horses:		
Stallions	13,624	13,486
Mares	400,786	352,199
Geldings	383,377	360,640
Colts and fillies	192,222	153,976
Mules	10,067	8,371
Total horses and mules	1,000,076	888,672
Cattle:		
Bulls	20,600	17,077
Milch cows	352,989	354,403
Calves	332,040	283,371
Steers	131,943	129,787
All other cattle	441,759	426,452
Total cattle	1,279,331	1,211,090
Sheep	134,177	127,892
Swine	521,240	573,938
Poultry:		
Hens	3,882,070	3,605,514
Chicken	3,609,622	3,787,203
Turkeys	208,125	204,322
Geese	113,493	93,780
Ducks	187,059	156,922
Total poultry	8,000,369	7,847,741

BANK TRANSFER COMPLETED

On Tuesday, the 15th instant, the absorption of the Bank of British North America by the Bank of Montreal was completed. On that day the former branches of the Bank of British North America opened as branches of the Bank of Montreal. The existing management and staff were retained, excepting at a few duplicating points where two banks were close together and no useful purpose would be served by continuing both. The Bank of Montreal issued a circular letter to its new clients, stating that it was desirous of continuing their business, whether the accounts were large or small.

NEW BRUNSWICK ENQUIRY

An investigation is being conducted in New Brunswick into the financial operations of the former provincial government. On the 9th instant important evidence was given by Mr. W. B. Tennant, of St. John. A purchase of potatoes had been sent by the provincial government as a gift for the Belgian refugees. It is reported that more were purchased than were required, and the government disposed of the surplus at a loss of $32,861. The witness stated that rather than admit the loss the government decided to make good the amount, and did so through the assistance of some friends, including Mr Tennant himself. The witness is a contractor, and contributed the sum of $61,500 in return for the promise of a contract for the St. John Valley Railway. About the same time he received $100,000 of advance profits in connection with his contract.

Save! Don't take long chances on continued prosperity.

The Making of Your Will and The Choice of Your Executors are of Paramount Importance.

The proper care and distribution of your savings of a lifetime are dependent on your having a carefully drawn will and competent and responsible Executors.

It does not matter how much wealth you leave behind you, if it is not honestly and wisely administered by your Executors.

Our officials will be glad to consult and advise with you on these matters. It is the chief business of this Company to administer estates, and our advice and services will be of assistance to you.

Consultation with any of our officials places you under no obligation. Please write or phone for appointment.

"I Wish I Had Taken Twice As Much!"

Nothing is more often repeated in letters received at our office than the expression "I wish I had taken twice as much insurance while I was about it." When endowments, dividends or cash settlements are paid, the assured very often acknowledges the remittance with that remark The truth is very few men take as much Life Insurance as they can reasonably carry—and repentance often comes when additional Insurance is not procurable. Probably every reader of this paper believes in Life Insurance and carries more or less of it but one should ask himself the question, **Am I Carrying as Much Insurance as I Can Afford?** If the policyholders who are now entering the Company could read the evidence of gratified policyholders and beneficiaries, they would make a great effort to increase the amount applied for—and existing policy holders would double the amount of their protection. "One word more":— What income would your present insurance yield the beneficiary at say 6%?

The Monetary Times' Weekly Register of Fire Losses and Insurance

Belleville, Ont.—October 1—The Albert College was damaged.

Brantford, Ont.—October 4—Barns and contents of J. Nightingale were destroyed. Estimated loss, $10,000.

Chatham, Ont.—October 1—Home of B. Leeson was destroyed.

Clinton, Ont.—October 7—Warehouse of Harland Brothers and storehouse of Ball and Atkinson were destroyed.

Florence, Ont.—October 3—Residence of Mr. and Mrs. B. S[illegible] was destroyed.

Glace Bay, N.S.—October 9—Unoccupied house on Mitchell Avenue was destroyed.

Hanover, Ont.—October 6—Barn of Chas. Mauer was destroyed.

Ingersoll, Ont.—October 8—Plant of the M. T. Buchanan Company was damaged.

Kingsclear, Ont.—October 8—Barns and contents of C. Anderson were destroyed.

New Westminster, B.C.—October 12—Barn and crops of G. Filman were damaged. Estimated loss, $5,000.

Niagara Falls, Ont.—October 2—The Victoria Theatre was damaged. Estimated loss, $2,000.

Ridgetown, Ont.—October 10—The Michigan Central Railway freight sheds were damaged. Estimated loss, $10,000.

St. Catharines, Ont.—October 8—Wipper's confectionery establishment was damaged. Caused by natural gas explosion. Estimated loss, $20,000.

Thetford Mines, Que.—October 1—Home of Mr. Grenier was destroyed.

Toronto, Ont.—October 1—Drying kiln of the Dunlop Rubber Company, Booth Avenue, was damaged. Estimated loss, $1,300.

October 5—Plant of the Cluff Ammunition Company, 2[illegible] St. Clair Avenue, was damaged. Estimated loss, $500.

Trenton, Ont.—October 14—The explosives plant of the Imperial Munitions Board, operated as the British Explosives, Limited, was destroyed. Thirteen or fourteen explosions following in rapid succession the first explosion, practically levelled the extensive plant and fire did the rest. The amount of loss is not known yet.

Vancouver, B.C.—October 3—The Albany rooms, 1046 Granville Street, were damaged. Estimated loss, $1,000.

Waterdown, Ont.—October 1—Drug store of W. Cummings and stores of O. B. Griffin and S. H. Gallegher were damaged.

Windsor, Ont.—October 7—Residence of C. J. Keeley, [illegible] Howard Avenue, was damaged. Estimated loss, $1,200.

ADDITIONAL INFORMATION CONCERNING FIRES ALREADY REPORTED

Victoria, B.C.—Fire Chief Davis submits the following report for the month of September to *The Monetary Times*:—

Loss by fire on buildings, $488; loss by fire on contents, $214. Total loss by fire on buildings and contents, $[illegible]. Insurance on buildings, $1,7[illegible]; insurance on contents, $2,[illegible]. Total insurance on buildings and contents, $[illegible]. Amount of property at risk by fire, $105,800.

Vancouver, B.C.—Fire Chief Carlisle submits the following report for the month of September to *The Monetary Times*:—

The estimated total damage resulting from fire for that period, excluding figures in connection with the "University Club" loss of September [illegible]th, which has not as yet been adjusted, amounted to $[illegible] of which amount $[illegible],384 was covered by insurance, leaving a property loss above insurance at $[illegible]. The "University Club" loss (to building only) will amount to approximately $200 and is fully covered. The total value of the property involved by fire for the month was $1,535,600.

The following shows the cause of fires for the month: Backfire (carburetter) 1, carelessness with cigarettes, matches, etc., 4, chimney fires 9, cleaning auto engine with gasoline with lighted candle too near 1, coal oil stove exploding 1, electrical origin (short circuiting, defective wiring) 8, fire breaking out again 1, firewood drying on top of furnace, catching fire 1, flying sparks (engines, chimneys and smoke-stacks) 8, gasoline stove near curtain 1, hot ashes from stove falling on wooden floor 1, hot coals falling from engine 1, overheated dry kiln 1, overheated kitchen ranges 2, overheated stovepipes 1, parafine wax on stove catching fire 1, spontaneous combustion 5.

COBALT ORE SHIPMENTS

The following is a statement of shipments in ore, in pounds, for the week ended October 11th, 1918:—

La Rose Mines, 73,634; Tretheway, 86,000; Dominion Reduction, 66,800; Mining Corporation, 65,493; McKinley Darragh, 75,435; Coniagas, 83,515; Nipissing, 301,835; total, 752,712.

The total shipments since January 1st now amount to 23,620,147 pounds, or 11,810 tons.

RAILROAD EARNINGS

The following are the earnings of Canada's transcontinental railways for the first week in October:—

Canadian Pacific Railway.

	1917.	1918.	Inc. or dec.
Oct. 7	$2,842,000	$3,458,000	+ $616,000

Grand Trunk Railway.

Oct 7	$1,014,812	$1,460,738	+ $445,926

Canadian Northern Railway.

Oct. 7	$ 758,500	$1,072,900	+ $314,400

FIRE PREVENTION IN BRITISH COLUMBIA

Organization of a Provincial Body Completed at Representative Meeting—Appoint Officers Later

The campaign against fire, the needless cause of a great economic and industrial loss annually in British Columbia, gained further impetus when at a meeting held in the Board of Trade Rooms, on Wednesday afternoon, October 2nd, "The British Columbia Fire Prevention League" was successfully launched. The meeting was a representative one, delegates being present from not only the city but from other centres of the mainland and also from Vancouver Island.

Hon. J. W. deB. Farris, attorney-general, occupied the chair and in the course of his remarks stated that while the government was seeking to curtail the necessary expenditures they also realized the need for increasing rather than diminishing the activities to prevent fire loss. Never was there a time, he said, when such a course was so essential. Mr. Farris paid tribute to the board of underwriters for stimulating the activities of the government along these lines and for giving every possible assistance to the government to prevent fire loss. So far as the government was concerned, the chairman did not want this movement to be too much under the control of the provincial authorities. He did not think it was right for the men interested in the scheme to lay all the burden of the working out of it upon the government.

Top-Heavy with Machinery.

There was plenty of machinery with which to work out the fire prevention campaign, he thought. In fact, Mr. Farris stated that the trouble with the province was that it was top-heavy with machinery. It had a small population but machinery enough for many times the number of people. He also referred to the fact that Ontario had started a movement similar to the local one.

That a large percentage of the annual fire loss in the province was attributed to sheer carelessness was the opinion expressed by H. G. Garrett, superintendent of insurance. The critical stage had been reached and steps must be taken to arrest the severe drainage on the resources of the province through this loss. He believed that it was largely a psychological problem and therefore the solution was to stir up the minds of the people.

R. J. Douglas, of the Vancouver Board of Trade, in the course of his address, stated that the government would do just as much as the people demanded it. The first question, he said, that the people asked when they read of a big store or factory being burned: "Is it insured?" They forgot that they themselves were indirectly called upon to pay the insurance.

Annual Loss Very Heavy.

Steps were being taken by the government to conserve the food supplies and commodities of the country, declared J. L. Noble, secretary of the Vancouver Island Fire Underwriters' Association, but nothing had been done to prevent the great loss from fire. Mr. Noble quoted figures showing that the annual loss in the Dominion ran into many millions of dollars while in the United States the loss was away up in the billions. Increased and more efficient fire departments was not the remedy, he said. neither were the fire insurance companies doing the work; but it could alone be done by a general instruction of the public along fire prevention lines. There was a great contrast between Canada and the European countries. Here, a fire was thought to be merely a misfortune, there it was a crime. In Canada, the people tried to extinguish a fire, in Europe they labored to prevent it. In the United States there had been formed the National Council of Defence recently to combat the loss by fire. Mr. Noble said that of the total number of fires in the Dominion, 90 per cent. were due to carelessness. The government, he stated, would have to be behind any movement that was started to combat fire loss and the authorities would have to back up anything that the league brought before the people.

Would Cut Insurance Rates.

Some of the delegates expressed the belief that there should be a reorganization of the present insurance system. C. G. Palmer, representing North Cowichan, thought that something new should be started. Fifty per cent. of the money collected on insurance went to pay expenses, while the balance went into the treasury to pay losses. The people should be interested in the movement and it should be pointed out to them that by being careful they would then have to pay a lower insurance rate. Mr. Palmer would make fire insurance a municipal matter putting the business in the hands of municipalities and doing away with insurance companies and expense. Thos. Turnbull, New Westminster, declared that insurance companies were a monopoly. The public had no control with regard to insurance rates and he thought that any city or municipality that spent so much on fire fighting apparatus and equipment should have something to say with regard to the amount of the rates. Mr. Turnbull suggested that the insurance companies should be combined into one organization and come under the class of public utilities.

Organization Resolution.

The following resolution for the formation of the league was passed upon motion of F. A. Brodie, of the British Columbia Manufacturers' Association, and C. G. Palmer, of North Cowichan: "Whereas for some years past there has been a great loss of life and property by fire in this province, involving needless waste of our resources, and a continuance of such loss is a matter of the gravest concern, particularly at the present juncture, when food, material and supplies of every kind are necessary for the successful prosecution of the war: Be it resolved that an organization be created under the title of the British Columbia Fire Prevention League, whose objects shall be: To awaken the people of the province to the serious waste and loss caused by fire; to prevent the occurrence of fire; to inculcate the necessity for more careful habits on the part of the public; to generally adopt any means for the attainments of these ends."

Committee to Choose Officers.

When the question of election of officers arose it was decided to leave this in the hands of a committee composed of Hon. Mr. Farris, who was chosen as hon. president; H. G. Garrett, superintendent of insurance; J. L. Noble, R. J. Douglas and P. G. Shallcross, president of the Vancouver Board of Trade. This committee will also name the eight members of the executive committee and it was decided also to leave with the executive the question of financing the league's activities.

Among those present at the convention were the following: W. L. Foster, Mainland Fire Underwriters; Robt. B Spears, Rotary Club, Victoria; W. F. Stewart, vice-president of the Mutual Fire Insurance; Wm. Townley, manager of the same company; Chris Spencer, of Spencer's, Limited; A. R. Wright, of the Ladysmith Fire Department; D. Gardiner of the North Vancouver Fire Department; James Plester, Rossland; J. R. Algar, New Westminster; Mrs. R. C. Stoddard, Local Council of Women; A. W. Woodard, vice-president of the Mainland Fire Underwriters; W. F. Ing, New Westminster; A. N. Wolverton, secretary of the Vancouver Apartment House Owners' Association; Mrs. T. H. Wright, W.C.T.U., of British Columbia; Mrs. W. A. Clark, of the Women's Canadian Club; Chas. S. Richmond, Burnaby; Thos. Turnbull, New Westminster; J. H. Watson, New Westminster fire chief; John Parkins, Nanaimo fire chief; Alderman W. J. Ferguson, of Nanaimo; J. F. Moffatt, the fire chief of Vernon; and Fred. A. Burgess, president of the Mainland Board of Underwriters. A. E. Goodman is acting as secretary of the newly formed league.

Agents, Are You Satisfied?

SCHOOL CHILDREN LEARN TO PREVENT FIRE

Saskatchewan's Programme Provides for Teaching of This Kind in Schools

For the first time in the history of Saskatchewan, time has been devoted during school hours, under the permission of the department of education, for lectures on fire prevention. This was during October 7th or 8th, just before Fire Prevention Day, October 9th. Arthur E. Fisher, fire commissioner of Saskatchewan made a request to the department of education for co-operation along this line with the above results. Special bulletins were prepared for the teachers.

The following circular was sent out:—

"Wednesday, October 9th, 1918, has been named as Fire Prevention Day. Its purpose is to reduce the fire loss of this province, specially that which is directly due to carelessness and avoidable causes.

"The department of education, at the request of the fire commissioner, has very kindly decided to allow the teachers of this province to take up the question of fire prevention with their pupils during the last hour of either the morning or afternoon session of October 7th or 8th. Impress upon your pupils the necessity of telling the folk at home the subject discussed at school.

Facts to be Presented to the Pupils.

(a) A few reasons for fire prevention:—

"(1) In 1917 our fire loss was $2,750,000. During the first six months of 1918, it was $1,250,000. Property destroyed by fire is absolutely lost.

"(2) In 1917 twenty-three lives were lost and fifteen severely burned. During the first six months of 1918, twenty-three were burned to death and ten severely burned. Impress the awfulness of being awakened by the house on fire, with its consequent danger to human life.

"(3) Necessity of conserving foodstuffs. Destruction of food by fire lessens the supply. Our soldiers at the front must be supplied with food.

"(4) Buildings destroyed are generally replaced. Materials cost more than formerly.

"(5) It is our own money paid in premiums that the insurance companies use to pay losses. We all help to pay our neighbor's loss. Save money.

"A few of the most common precautions to prevent fire:—

"(1) Remove all rubbish and trash that may have accumulated around the premises.

"(2) Look over the heating apparatus. See that the stove pipes and chimneys are in good condition. Do not leave stove pipes too close to partitions without protecting the woodwork. Show the danger of pipes passing unprotected through partitions under stoves from falling ashes.

"(3) Show danger of dumping ashes near wood or where live coals can be blown about.

"(4) Discuss the dangers of children playing with matches.

"(5) Show the danger of fire from overheated stoves and also from leaving hot fires unguarded.

"(6) Make clear the danger of permitting smoking around barns, granaries and stacks. Watch where stubs of cigarettes and cigars are thrown away as well as pipe ashes.

"(7) Oily rags and waste left lying around in barns ignite spontaneously. Burn them at once.

"(8) Gasoline should not be kept in the house nor in the barn. Keep it 25 feet away from any building.

"(9) Oil stoves and lamps should be filled only in daylight and never near an open light or fire. Keep oil stoves well cleaned and watch for leaks.

"(10) Never fill the tank of an auto or tractor with gasoline except in daylight and never near an open light or fire.

"(11) Plow fireguards around the buildings and the granaries.

"Our records show these to be the most common causes of fires due to carelessness. Dwell upon each topic showing the effect of each particular case of carelessness. Use your blackboard so that the facts presented may be considered by the pupil both orally and visually.

"Ask the pupils to inspect their own homes and premises and endeavor to persuade their parents to remedy conditions from a fire prevention standpoint. Have them make a report to you. Suggest the remedying of unfavorable conditions on October 9th, 'Fire Prevention Day.'

"It is a patriotic duty of every citizen of Saskatchewan to prevent fires. Canada at war needs every ounce of her energy and resources, the latter of which fire will absolutely destroy.

"Your co-operation in this great movement is earnestly requested. Think how far-reaching your influence will be and 'do your bit.'

"Kindly advise this office by letter how the discussion was received by the pupils and of any action taken by either pupils or parents.—Arthur E. Fisher, fire commissioner."

OGILVIE FLOUR MILLS COMPANY

The profits of this company for the year ended August 31st, 1918, are the largest on record so far—namely, $1,955,414, or $600,000 more than the profits for 1917. This amounts to 72½ per cent. upon the common stock, after the preferred dividend has been deducted. The statement is as follows:—

Milling profits	$ 832,910
Other profits	1,122,504
Total net profit	$1,955,414
Preferred dividend	140,000
Available for the common stock	$1,815,414
Common dividend	675,000
Surplus for year	$1,140,414
Previous surplus	190,177
Total surplus	$1,330,592

The former contingent account has been appropriated for the creation of a new rest account, and a new contingent account, amounting to $1,596,407, has been opened; the latter sum did not apparently pass through the private account, and, if added to the profits, would make a total of $3,411,821. The usual quarterly dividend at the rate of 7 per cent. upon the preferred and a common stock dividend of 12 per cent. per annum were paid. There was also a bonus of 15 per cent. upon the common stock.

The margin of profit upon the company's turnover was approximately 2 per cent., the total business handled being $56,657,117, of which $40,000,000 consisted of the sale of the products of the flour mills. Business was good for the year, although at times it was difficult to secure sufficient wheat as a result of the control established through the Canada Food Board. The action of the government and the state of the wheat market, are also accounted for as being responsible for the creation of the contingent reserve account. As the continuation of the present high prices cannot be permanent, it may naturally be expected that some loss will be incurred when prices fall again.

It is as much your duty to save as it is the duty of the soldier to fight.

Fuel Problem Grows More Acute

Permanent as Well as Temporary Solution of Canada's Fuel Problem Must Be Found—Present Shortage Is Warning of What May Be Expected to Recur Later—Owing to Canada's Position, International Relations Are Affected

SINCE 1914, the problem of supplying Manitoba, Ontario and Quebec with an adequate coal supply has been increasingly difficult. In spite of a rapid increase in the price of coal, amounting to around one hundred per cent. in the last eight years, the supply is now more than ever behind the demand. We have, wherever possible, substituted Nova Scotia and Alberta coal in place of our regular supply; we have appointed fuel controllers, have restricted the use of coal in non-essential industries, and have made some attempts to secure increased quantities of hydro-electric power, and to curtail wasteful uses of the same. We have also sought for other fuels, such as wood, oil, etc., to supply our domestic fuel demands. Most of these efforts have been eminently unsuccessful, and, in so far as they have been successful, the present situation merely emphasizes by so much more the seriousness of the question with which we are confronted.

Canada's coal problem may not at first glance appear to be the national one it actualy is. British Columbia, Alberta and the Maritime Provinces happily possess coal resources which are as permanent an asset as coal supplies can be—considering the fact that the development of the coal mining industry does not mean the creation of a permanent source of supply, but rather the using up of capital resources which cannot be replaced. If the briquetting experiments in Saskatchewan are successful, part or all of Manitoba and Saskatchewan's supply will be assured for a considerable time. But Ontario and Western Quebec, at present, are absolutely dependent upon the United States. This is the great industrial district of Canada. And, moreover, it is just here that we perceive the international significance of the situation.

This dependence with respect to coal, places an immense bartering power in the hands of the United States. The present war has amply demonstrated how nations in the possession of this power have been compelled to exercise it on behalf of the absolute needs of their own citizens. This fact is well emphasized by the statements of Mr. Arthur V. White in his article, "Coal Problem of Canada Demands National Action," which recently appeared in these columns. Mr. White states:—

"Countries like Norway and Sweden, Denmark, Holland and Switzerland—countries, indeed, which are neutral—are practically dependent upon the warring nations for coal, and have found themselves seriously curtailed in obtaining this commodity. They have been forced to recognize the momentous fact that the countries which possess coal are able, absolutely, to dictate the terms upon which coal will be supplied to others.

"Norway and Sweden are short of coal. Both Great Britain and Germany have released coal to these countries in exchange for food. Britain has required European neutral ships calling for coal to bring cargoes of foodstuffs or other desirable commodities. Holland must get its coal from Germany, which consents to supply it only in return for large quantities of food, especially vegetables and meat raised on Dutch soil. Holland at present has open to her no other market in which to secure coal. From Switzerland, Germany demands cash at the rate of 40,000,000 francs monthly for nine months at five per cent. in return for a monthly delivery of 200,000 tons of coal; and within the last month it has been reported that Germany has liberated some hundreds of agents instructed to secure control of the hydro-electric resources in Switzerland, so that, with these under their direction, and in control also of the coal supply, Germany would more completely dominate Switzerland. One of the chief factors which has existed in connection with Alsace-Lorraine has been that Germany wishes to maintain this outlet for her coal, and in return derive from these areas the supply of iron which she herself lacks. The necessities of life—not the precious metals—are the real arbiters of exchange."

Suppose that under the necessity of ensuring a coal supply for Ontario and Quebec, concessions should be demanded which might seriously affect any or all parts of the Dominion, where would Canadians be under such circumstances?

The United States, perceiving that its own resources have a limited though indefinite lifetime, will surely endeavor to conserve those resources as far as possible in consideration of the immense industries which are dependent upon them. Under the stress of war conditions coal has become temporarily scarce in the United States. In spite of this Canada has been treated by the United States fuel authorities as though she were one of the States of the Union. Can we expect more, or even as much, when the anticipated permanent shortage materializes, as it surely will if present indications are any guide?

Obviously, there can scarcely be a greater national economic problem than that of the supply of fuel, upon which our whole industrial and economic structure relies. No national solution of the problem has been reached. Some of the energetic municipalities in the industrial section of Western Ontario have taken a lead in trying to meet the present fuel exigencies. Advantage was taken of "fuelless Monday," February 11th, 1918, to hold a conference on the subject. Citizens like Mr. D. B. Detweiler, of Kitchener; Mr. C. Cook, of Brantford; Mayor Dakin and Mr. Hancock, of Galt; Mr. Weichel, of Waterloo; Mr. Hall, of Hespeller; Mr. Kelly, of Hamilton, and others, arranged for a meeting. This meeting was held in the council chamber at Galt, Ontario, and was attended by representatives of most of the surrounding cities and towns. The chairman, Mr. J. H. Hancock, who is president of the Galt Board of Trade, in calling the meeting to order, referred to the "seriousness of the fuel situation, urging the advisability of forming an organization to go carefully into the matter of solving the fuel problem, not for this year only, but also for next year, in order to prevent a recurrence of the experience we have just had."

The meeting was addressed by Mr. Arthur V. White, consulting engineer, and Mr. Clyde Leavitt, chief forester, both of the Commission of Conservation. Mr. White outlined the situation comprehensively in statements which are fully applicable to present conditions. He spoke as follows:—*

Address by Arthur V. White

"Any comments that may be made within the brief time at our disposal must largely be suggestive, and designed to permit a broad outlook upon the fuel problem.

"It is impossible to overestimate the gravity of this problem. Apart from the issues of the war as they affect the whole Empire, I believe there is nothing before the Canadian public to-day that is of such serious moment as this national fuel problem. We simply cannot live in this climate without an adequate supply of fuel. We have before us, of course, the exigency of the present winter, which will doubtless be met. "We will be able to scramble through somehow. Large sections of the United States, however, are already taking action for the winter of 1918-1919. They have evidently been advised by their own fuel administrator that they must conserve their own fuel supply for next winter Mr. Leavitt will refer to some of the activities that are now being instituted by various portions of the States to get ready for the coming winter. Some municipalities in Canada have already begun to take action in this respect. This fuel situation as *a national problem* has only been hastened by the present war, owing largely to increased coal demands and to the depletion of the reserves. Previous to the war, it was estimated that the anthracite coal fields in the United States would provide fuel supply for about one hundred years, but, because of the increased consumption, the United States Federal Government, doubtless, in the near future, will be compelled, in the interests of its own citizens, to place much more drastic restrictions upon the export of coal than before the war. Anything done by way of practical assistance by this Convention making for the alleviation of conditions which may be looked for next winter is effort that deserves every possible support.

Possible Sources of Relief

"Outlining possible sources of relief, I would set out:—

"*First.*—The obtaining from the United States of the largest possible coal supply. What that supply will be will probably be impossible to determine until the stress of present circumstances connected with the supply for this winter is overcome. The United States sends to Canada a considerable supply of coal—over fifty per cent. of our consumption; ninety-eight and one-half per cent. of all the oil we use comes from the United States, and the United States is helping Canada to finance. Therefore, we must be careful to maintain our good neighborly attitude towards the United States, remembering in how many ways each country is indebted to the other for material commodities. Those countries that possess coal, like Britain, the United States and Germany, have, during the last three years, recognized as never before that coal is really one of the most important products of the commerce of the nations. Germany dictates to Holland what supplies she must send over her border in exchange for coal. Switzerland has got to send to Germany 40,000,000 francs for 200,000 tons of coal per month. Great Britain requires that certain ships touching her shores for coal must bring foodstuffs. Where would Canada stand under corresponding demands?

"With respect to present allotments, we may firmly trust the efforts made by our Dominion fuel controller, Mr. C. A. Magrath. He has a good hearing in Washington, and his efforts there are held in the very best esteem. No doubt, just as soon as circumstances are fitting, he will receive some declaration from the United States authorities respecting the extent to which we may expect coal from the States for next winter. Then more definite information can be given to the public.

"*Second.*—Our fuel supplies in the east and the west. We know something about the difficulty experienced in getting coal out of the mines, due to strikes, car shortage, etc. There must be some authoritative action taken with regard to mining in the west so that there shall be a wider distribution of western coal, causing it to be distributed as far east as it is possible to convey it, in order to serve areas now supplied with coal from Pennsylvania.

"In Nova Scotia a very serious shortage of labor has already been experienced, and, owing to curtailed means of transportation, the supply of coal available from that source cannot in the near future be transported to the west.

"*Third.*—With respect to the peat: I believe as soon as the government will clearly show that peat fuel may economically be delivered from the peat beds to the consumers' cellars, there are available energetic men with private capital, if so needed, to take the matter up as a commercial proposition.

"*Fourth.*—Hydro-electric power. With respect to hydro-electric power, there is a serious shortage. There is also the fact that the Hydro-Electric Power Commission of Ontario expects to be able by about October, 1918, to deliver an extra 50,000 horse-power. This depends upon the completion of the work now in progress at Niagara Falls. The Chippawa plant under way will probably not be available for a period of at least some three years or more. In this connection an important point that has not received the emphasis to which it is entitled, is that citizens of Canada need never expect to find the solution of the heating problem through the utilization of electrical energy for *heat*. The reason is clear and may easily be understood by a few sentences. It is profitable here to make this point clear so that this source of misapprehension may be entirely removed. Now, out of one horse-power-hour of electrical energy only 2,545 heat units can be secured, while in one pound of good coal there are about 13,500 heat units. We are importing yearly from the United States about 4,500,000 tons of anthracite coal, while we export to the United States about 200,000 horse-power of electrical energy. These two quantities on a reasonable basis of comparison are practically equivalent, but if you were to get this coal into Canada, and turn it into electrical power, and then use that power for the generation of *heat* you would only get the heat equivalent of about 450,000 tons, or 10 per cent. When electrical energy gets substantially cheaper,—if it ever does,—it is possible that we will be using more of it for heating, but it is impossible to heat this country with electrical energy, even if all the country's hydro-electric power was available for such purpose. This is because basic physical elements inherent in the problem make it impossible.*

---

*The addresses and other information regarding the meeting are derived from the official report.

"*Fifth.*—Let us next refer to wood fuel. Now, what can the municipalities, such as are represented here, do with regard to next year's fuel supply? There seems to be nothing to give immediate local attention to, except wood. It will be necessary to ascertain what quantities of wood can be obtained locally, what local means of transportation, such as motor trucks, suburban railways, etc., can be employed to deliver the wood to suitable centres. Steam railways are bound to be overtaxed. Local supplies, as far as possible, should, in times of stress, be handled locally by local transportation. If the local sources for wood supply are insufficient, it may be necessary for the government to open up wooded tracts. The farmers were the last to use anthracite coal, and will, I expect, be the first to suffer from curtailment of supply; hence they should be fully alive to the seriousness of the situation in order that they may look to the resources of wood in their immediate vicinity, because it will be questionable to what extent the railways will be able to provide cars for sending coal, as heretofore, to the more out-of-the-way country sidings.

The Labor Problem

"With respect to co-operation, there will have to be some active agency instituted, comprising representatives of county councils, farmers' institutes, municipalities, and fuel dealers, qualified to take charge of the distribution. If such committees be appointed, locally, in order to induce to the greatest possible extent individual activity, probably the first difficulty that will be encountered will be the labor problem. There is a shortage of labor on the farms already. In many localities farmers are even disposing of their stock and reducing the acreage of cultivated land because they cannot secure labor. If this condition existed in a European country there would be no difficulty about providing labor. Citizens would be compelled to labor.

"There are large detention camps, also a large alien population in Canada. If it is a case of compulsory action to keep people from freezing to death, some means can surely be found by which to conscript, if necessary, alien labor. Why not secure from detention camps men accustomed to the axe and the crosscut saw? They can be housed in suitable institutions, and, where necessary, placed under armed guards, to be supplied by the militia from soldiers back from the front and unable to perform more strenuous exercise. I make these suggestions with regard to labor, because the problem for 1918-1919 already looks serious; and if it is a question of whether we are to get along or not, without more labor, and labor can be made available from the sources indicated, then full advantage should be taken of it."

Address by Mr. Clyde Leavitt

The chairman then called upon Mr. Clyde Leavitt, who, dealing with the importance of increasing production of wood, stated as follows:—

"Increased production of wood as a substitute for coal: Substitutes seem to be the order of the day for various articles required for war purposes, direct and indirect. The question of wood has not been considered much. Generally, it requires a reorganization of ideas in order to get back to wood. The question to be considered is what to do for the situation next winter. It is very essential that we look ahead right now as to what can be done next winter. Wood needs to be cut long enough in advance to have a chance to season, so far as is at all possible, and it should be cut during the balance of the winter and during the summer so that the results will be available for use next fall and winter. If wood is used during the fall and spring, it can be made to supplement the use of coal and relieve the demand for it. According to the best advice it is a serious problem, and the only thing to be done is to prepare for what may happen. Every good citizen should relieve the demand for coal by substituting other things, which would provide more coal available for war purposes and relieve the congestion of railways to a very notable extent, and also relieve some of the great trouble experienced with car shortage. It is going to require the investment of capital and thorough organization. Wood cannot be secured by simply talking about it. Someone has to invest money, which will be tied up for a considerable period of time. People may feel that this is the duty of the dealers. No doubt they will do the best that they can to handle the situation to a certain extent, but it cannot be expected that dealers, without any assistance from the people, can handle the whole situation. Many dealers do not feel justified in tieing up the large amounts of money involved in laying in sufficient reserves of wood for next winter, and besides, they cannot tell what price they will be able to get next winter. Whatever the dealers are able to do, it must be supplemented by action through governmental authority. Action by city and municipal governments as to this question is being taken in a number of cases already. The city of Ottawa has just voted to buy wood as a relief for next year, and the contract has been let in the Gatineau valley for 14,000 cords of wood at a price of $5.75 per cord, delivered on railway tracks, to which amount must be added transportation charges and costs of sawing same into stove sizes.

"The city of Winnipeg purchased a supply of 14,000 cords, and the mayor reported that the reserve supply of wood had already proved a big factor in avoiding a fuel famine.

"Brockville reports that they are using some of the Forestry troops' services in cutting wood, which is suggestive to other municipalities that have either gone into the wood question or are considering doing so. What is needed to handle the situation in a broad way, is an organization extending right down through from the Dominion to provincial, and thence down to the municipal governments in the provinces of Ontario and Quebec. The province of Quebec is already going into the question and making a local survey of the wood requirements to ascertain what the situation is, and the Forest service is getting information to find out what can be done to furnish wood in each case. Something of the kind should be done also in the province of Ontario to

---

*[NOTE.—For a fuller elaboration of this subject see letter "Electricity will not replace Coal," by Arthur V. White, in *The Monetary Times* of March 1st, 1918; also the article by the same author, entitled "Electricity will not replace Coal," in *Industrial Canada*, for April, 1918.—EDITOR.]

ensure that the question will be handled in an adequate way.

Methods Used in United States

It is so evidently serious in the United States that they have organized, in a broad way, to stimulate the production of wood, and, if necessary, to fall back on wood fuel to relieve the demand for coal. In view of the United States being compelled to take action to produce more wood, it is no less necessary that Canada should also take steps, in view of the fact that we have to get our anthracite coal from the United States. The United States have a federal fuel administrator and State fuel administrators. Under each State fuel committee they have local fuel committees in different cities and municipalities. In some cases the cities or towns have gone into the wood business direct, while in other cases they are having the matter provided for by each farmer cutting more wood and bringing it in for local storage, and later for use. Action is being taken with a view to saving on railway transportation, or, in other words, they are trying to get the farmers who have the wood supplies close at hand to depend on their own wood supplies instead of going to the nearest city for coal. The same thing applies to smaller towns where wood can be secured in the vicinity, depending on teams to haul instead of railways. This will have a great effect in relieving the car shortage, which at the present time is serious. There are a number of cases where the situation might be handled locally along these lines in our Canadian towns and municipalities. The use of machinery to relieve the demand for labor must be encouraged, also the use of power saws instead of hand labor for chopping and sawing wood. Two men could do the work of five or six by the use of machinery, and in some places motor trucks could haul wood during the summer when the roads are good. People ought to be encouraged to lay in a reserve supply of wood during the summer months when transportation can be secured instead of waiting till winter comes and delivery becomes difficult. In some cases it may be perfectly feasible for someone to buy stumpage on a block of bush and arrange for labor to cut and deliver it. There are a great many ways to work the matter out. No one can come in from the outside without having made a careful study of all conditions and advise just as to what one ought to do. The people in each locality know best their own conditions, and know what best to do under those circumstances. They must be made to realize at once the seriousness of the situation and make provision for next winter. In some cases it may be feasible to get wood from Crown lands, but it will be found that the Crown timber lands are so far away from most places that the freight charges would be prohibitive, and hence it would be more feasible, as a rule, to depend on local supplies of wood. With reference to wood being secured from Algonquin Park, the government offers free stumpage, but it would probably be more feasible in many cases to get wood cut in the vicinities of the cities or towns.

"In closing I would emphasize that some action should be taken to bring about the formation of a special organization from the Dominion down through the provincial to the municipal governments. Such an organization would be in a position to study local conditions, and then a further meeting might be held with a view to getting together representatives from all over the province and arousing the interest of the citizens to the necessity of preparing so as not to suffer severely next winter."

(To be Continued.)

PERSONAL NOTES

Mr. R. Bodell, who was supervisor of the Great North-West Telegraph Company, died recently at his home, 28 Kennedy Avenue, Toronto.

Mr. F. C. Wade, K.C., recently appointed agent-general for British Columbia in London, England, has left Vancouver to take up his new duties.

Mr. A. E. Warren has been appointed to the position of general manager of western lines of the Canadian Northern with headquarters in Winnipeg.

Mr. Wm. A. Menton, a prominent Toronto lawyer, died on the 17th inst. He was formerly a member of the firm of Callahan and Menton, barristers.

Major J. M. Davison who, for some years has been in the insurance business, has become associated with the Fidelity Agency Corporation, Limited, Toronto.

Mr. M. H. MacLeod, who, for a number of years has been general manager of Canadian Northern lines west of Port Arthur, has been appointed vice-president of the entire system. His headquarters will be in Toronto.

Mr. Victor L. W. Harber, assistant manager of the Financial News Bureau in Toronto, died with pneumonia. Mr. Harber was with the news bureau for many years, starting with the firm soon after the service was inaugurated in Toronto.

Mr. P. G. Mignault, K.C., of Montreal, has been appointed to the bench of the supreme court of Canada, in succession to Sir Louis Davies. Mr. Mignault, in consequence, has resigned as a member of the International Waterways Commission.

Mr. A. B. Clabon, chairman of the Vancouver Chamber of Mines, who has been interested in the deal whereby the Wolsely claims have been taken over by the Eastern Syndicate, was instantly killed on October 16th, by falling over a precipice at Silver Creek.

Sir Charles Fitzpatrick has resigned the Chief Justiceship of the Supreme Court of Canada, and has been appointed Lieutenant-Governor of Quebec, in succession to the late Sir Pierre Evariste Leblanc. The vacancy in the Chief Justiceship has been filled by the appointment of Sir Louis Davies, whose promotion will necessitate an early appointment to the Bench of the Supreme Court. In accordance with the provisions of the British North America Act, this vacancy will be filled from the province of Quebec, which requires that at least two members of the Supreme Court shall be appointed from among the judges or barristers or advocates of that province.

MR. F. R. GRAHAM,

of Graham, Sanson and Company, Toronto, who has been elected a member of the Toronto Stock Exchange.

WAR LOANS AND THE MONEY MARKET

The seventh war loan of the Australian Commonwealth closed on the 15th instant, and it is understood that the total requested, namely, £40,000,000, was secured. Success was attained, however, only after a very strenuous campaign, in which every element of moral pressure which could be utilized was brought to bear upon possible subscribers. The bonds offered for sale by the Australian Commonwealth compare unfavorably with those sold in Canada. They carry interest at 5 per cent., are sold at par, and are subject to taxation. The maturity of the present issue, moreover, is just five years, and in Canada our experience has been that the bonds running for a longer term are more favored. In spite of these relative disadvantages, Australia obtained for war purposes up to June 30th of this year a total of £230,500,000, of which £149,000,000 was raised by the six war loans and war saving certificates, £47,500,000 was borrowed from the British government and £38,000,000 was due to the British government for war disbursements on Australian account.

The Commonwealth has aimed at financing the war by borrowing, but recently measures were adopted to increase the scale of taxation. The difficulty of raising money at rates below the market has been more and more realized, and the nation now wavers between the two alternatives of utilizing taxation, supplemented by borrowing at a higher rate, or of making subscriptions to the loan compulsory. On the 14th of this month a bill, making war loan subscriptions compulsory, was introduced for its second reading in the Australian House of Representatives. The measure applies to the present and future loans to the extent of any shortage in voluntary subscriptions. Those whose taxable incomes are under £250 are exempt, as are also soldiers and sailors who have served outside of Australia. The amount a person may be required to subscribe to loans in any year is not to exceed six times his yearly average income tax for three preceding years. Penalties are provided for failure to subscribe voluntarily, but payment of the penalty does not relieve the obligation for subscription. Other means of forcing funds into the channel of the war bonds were recently announced; the Australian treasurer must consent to all construction of buildings, tramways and markets before such works can be proceeded with.

The experience of the United States in its fourth Liberty Loan campaign is also a suggestive commentary upon the difficulty of borrowing below the market. The United States Liberty Loan is offered at par yielding 4¼ per cent., and they are only partially exempt from taxation. Money rates have continually been somewhat lower, both in the United States and Australia, than in Canada, but the difference has not been as wide as that between the terms upon which the Canadian loans are offered as compared with those of these two countries. In the United States the element of patriotism has been first of all relied upon to ensure the success of the campaigns, the rate of interest paid being fixed at what is considered as a fair return. In Canada market conditions are the first thing considered, the element of patriotism being a secondary matter, which enables the government to borrow at a small discount below what its ordinary credit would determine. The consequence is that the Canadian loans have each been a success, and will continue to be so because the government will pay such a rate as will ensure successful competition with other borrowings, restricted as the latter are by the regulations which have been passed.

We are of the opinion that no fixed rate can be settled, but that governments must always take into consideration new conditions in the financial market and adjust the terms of their loans accordingly. Borrowing below the market rate discriminates against the subscriber, while to pay the market rate is to equitably distribute the cost of the war through the machinery of taxation.

CHURCH INSURANCE

The Methodist Church of Canada should think carefully before adopting a system of self-insurance or mutual insurance, for this path is already strewn with innumerable wrecks of similar schemes. The finance committee of the Church has already prepared a report before the general conference in Hamilton.

There are fundamental weaknesses in insurance of this kind. A strong industrial corporation, with its property in small units, scattered over a wide field, has weighty reasons for carrying its own risks, and thus saving the whole expense of underwriting and adjustments. But in the case in question the Church, as a whole, will not carry the risks, but will act merely as organizer of a mutual system of insurance. No capital is to be invested, losses being met by an assessment at the end of regular periods. Security will be required, however, from member churches in the form of a premium note at regular commercial rates.

One defect is that the risks are all of the same class. This is, however, not so serious a fault as is involved in a municipal insurance scheme, where the risks are varied, but all located within a small area The whole field is, however, small, and even if every Methodist church in Canada adopted it, the business would not be a large one; consequently, losses would show considerable variation, and assessments would vary accordingly, which would be very unsatisfactory to the average church budget.

A more important point is that the whole machinery of fire insurance will have to be erected, including provision for valuation, inspection and adjustment. It is scarcely possible that the Church can carry this out more economically than can the companies. The field is too large in area, and the benefit of experience and of the fire underwriters' organizations is lacking. The cost of management may, therefore, more than counterbalance any difference between the assessments and the ordinary commercial rate. Whether the expenses of management are included in the assessments or are borne by the Church as a whole does not ultimately make any difference. Company insurance rests upon a sounder economic basis, in addition to which the insurer has the benefit of capital investments and accumulated assets.

UNITED STATES OBTAINS ITS OBJECTIVE

Early in the week the welcome news arrived that the United States had succeeded in over-subscribing its $6,000,000,000 Liberty Loan to the extent of about $150,000,000. This is the fourth Liberty Loan floated by the United States since its entrance into the war in the spring of 1917. A total of $16,128,775,800 has been raised for war purposes, and large loans have been made to other allied countries. These facts must be kept in mind in a comparison of the financial achievements of the United States with those of the Canadian people.

The present campaign was seriously affected by the epidemic which prevailed throughout the country during most of the period. As a result it was practically impossible to hold the public meetings which have in the past been so relied upon to stimulate popular enthusiasm. The closing of the theatres and other places of amusement and the general absence of the people from public places had the same effect. The total asked this time was double what was asked in the case of the third Liberty Loan, and the total received was almost 50 per cent. greater. The number of subscribers has been roughly estimated at 25,000,000, which is almost one out of four of the population.

This achievement on the other side of the line is one which Canada may well emulate, and, if possible, surpass. The population of the United States is approximately fourteen times that of Canada, and, calculated on this basis, we should subscribe almost $500,000,000 to our coming Victory Loan. It must, however, be remembered that it is practically a year since our last loan was placed upon the market, and that the United States have floated two loans during this period. We should, therefore, to do equally well with the United States, subscribe considerably over the half million. One out of four of our population would be about 1,800,000, which is more than double the number of subscribers to the previous loan. There is no doubt but what the number of subscribers to our loans can be still further greatly increased.

IMPORTS FROM GREAT BRITAIN

The War Trade Board announces the issue of General Import License No. 2, covering importation from the United Kingdom of a wide range of commodities. The effect of the new general license is to place the United Kingdom and the United States on the same basis so far as import restrictions are concerned. These regulations extend also to Newfoundland and the islands of St. Pierre and Miquelon.

The list of commodities now requiring individual import license from the United Kingdom the United States, Newfoundland and the islands of St. Pierre and Miquelon may be summarized in general terms as follows:

Ale, porter, beer, lager, and ginger ale; art works, including pictures and drawings; automobiles valued at over $1,200; games, tables and accessories, dice and poker chips; baskets; beads and ornaments; bells; boats; breadstuffs and other edible substances; collections of coins, medals and postage stamps; candy and confectionery; dogs, for improvement of stock; electric lamps; certain electro-plated ware and gilt wares; fireworks and torpedoes; feathers, including artificial; fish hooks, rods, reels and artificial bait; certain fruits; furniture; manufactures of gold and silver, including jewelry; firearms and accessories, and ammunition if not for war purposes; animal ivory and its manufactures; lime and fruit juices; marble and its manufactures; matches; meerschaum and its manufactures; musical instruments and parts; nuts, not including cocoanuts and acorns; oilcake; perfumery and toilet preparations; phonographs, etc., and parts; photographic goods; pipes and smokers' articles; crude rubber; silverware; skates and parts; soap; sugar; toys; certain vegetables; wheat and wheat flour.

An importer's handbook, giving details regarding the restricted imports from all countries, and explaining procedure relative to obtaining import licenses, has been compiled by the War Trade Board, and will be mailed to any importer who applies for a copy.

Maximum prices have been fixed by the Canada Food Board for winter caught fish taken through the ice from lakes, rivers and other waters in Manitoba, Saskatchewan and Alberta delivered f.o.b. at primary rail shipping points. Whitefish and trout from Lake Winnipeg, Lake Manitoba and districts are fixed at 8 cents per lb., and at Lake Winnipegosis and The Pas 7½ cents. Whitefish and trout dressed are fixed at 8½ cents and pickerel at the same price.

PROGRESS IN MANITOBA

There is every reason to believe that Manitoba is going to do its duty, if not perfectly or fully, at least very well, this autumn.

What the experts say is that the number of buyers will be larger and that the total subscription will be increased in the neighborhood of ten million dollars.

This is a very large sum and no chagrin need be experienced if it is not reached in Manitoba. It is, however, known that what are spoken of as big interests will be in this coming loan more largely than they were in the last, and the rank and file will be quite as well represented. The institutions have a growing conviction that the purchase of these bonds is very fine business for them, and it is no doubt pretty near as good for the average citizen.

SIR AUGUSTUS NANTON,
Chairman, Manitoba Victory Loan Committee.

SASKATCHEWAN PUBLICITY

The Saskatchewan publicity committee is composed of the following gentlemen:—J. F. Bole, chairman; G. M. Bell, H. G. Smith and W. F. Kerr, with Gaston J. Johnson as secretary.

The publicity managers for each of the divisions of the province are as follows:—Regina division, C. M. Blewett; Moose Jaw, E. P. Field; Saskatoon, F. R. McMillan; Swift Current, A. S. Bennett; Weyburn, J. C. Martin; Prince Albert, W. C. McDougall; Yorkton, S. N. Wynn; North Battleford, F. Wright.

The various Victory Loan committees for Halifax city are meeting daily, perfecting the organization for the opening of the campaign. All matters in connection with the thorough canvass of the city are now swinging into splendid shape.

LOAN CAMPAIGN NOT POSTPONED

Last week there were rumors that the 1918 Victory Loan might be postponed, owing to the prevalence of the grip and pneumonia epidemic throughout Canada. This condition has resulted in restrictions upon the public meetings which are an important part of the campaign. Many of the workers are ill, and there will also be a disposition in some places to close houses against the canvasser. The matter was carefully considered all week, and a general meeting of the Dominion Executive was held in Toronto on Monday, October 21st. After taking into consideration the success of the United States Liberty Loan, the inconvenience in connection with a postponement, and the probability that the epidemic will be over at least before the end of the campaign, it was decided to go on in accordance with the programme.

The chairman, Mr. E. R. Wood, reported that he had telegraphed every province asking for a survey of the situation from a medical standpoint with an expression of opinion from the health officers as to when conditions might be expected to be better than at present. In some localities where the epidemic has been worst the last few days has produced a noticeable improvement.

Reports received by telegraph from nearly every province were unanimously in favor of going on with the drive as scheduled. Even one or two of the few who had previously suggested postponement declared that conditions were brightening and that they now favored proceeding full steam ahead.

HON. C. A. DUNNING,
Chairman, Saskatchewan Victory Loan Committee.

The city of Regina council voted to invest $250,000 in the Victory Loan. In 1917 the city took $110,000 of the loan.

Arrangements have been made by Victory Loan canvassers in Haileybury, the county seat of the district of Timiskaming, to donate all commissions to the Children's Aid Society of Timiskaming.

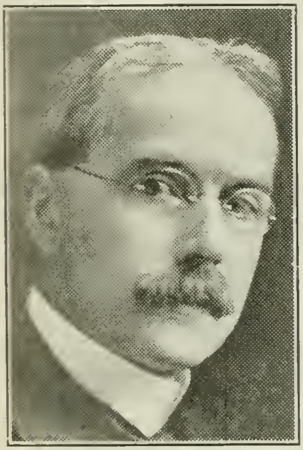
MEETINGS PERMITTED IN ONTARIO

Meetings of workers in connection with the approaching Victory Loan campaign are to be permitted throughout the province, notwithstanding the ban placed on public gatherings in some centres because of the influenza epidemic. The provincial secretary issued instructions to all medical health officers to this effect on October 22nd, as the result of representations made to the provincial treasurer, Hon. T. W. McGarry, on Monday, by Messrs. E. R. Wood, A. E. Ames and G. H. Wood, of the Dominion Executive Committee for the Victory Loan.

"The extreme importance of the Victory Loan campaign necessitates that no interference with the conferences, organization or committee meetings be made by the local boards of health," said the message which was sent to the local medical health officers by Dr. J. W. S. McCullough last night on instructions from Hon. Mr. McPherson. "It is the desire of the government that every municipality as far as possible facilitate the efforts of the local workers and that their meetings be allowed in all cases."



W. H. MALKIN,
Chairman, British Columbia Victory Loan Committee.

TORONTO READY FOR DRIVE

The Toronto 1918 Victory Loan Campaign Organization is now complete. An honorary committee has been formed with Sir Edmund Osler as chairman, and Sir John Eaton as vice-chairman, having a membership of over 200 prominent citizens. Then follows an executive committee of about 20 representative men, which determines the general policy for the campaign. Among its personnel will be the chairmen and vice-chairmen of the various other committees, such as publicity, finance, business, and employees' organization. Of the publicity committee, Sir John Eaton is honorary chairman, J. E. Ganong, chairman; E. L. Ruddy and Ralph Connable, vice-chairmen. The duties will be to look after advertising, posters, meetings, speakers, parades, etc.

For canvassing, the city has been divided into five main districts, each having a proper proportion of the business, industrial and residential areas. The city sales organization will consist of five district chairmen, each with a vice-chairman and sixteen captains, and under each captain will be a team of ten members, making in all 330 authorized canvassers.

Commissioner Gillespie, of South Vancouver, has been busy for several days canvassing for the loan and stated that it is his ambition to be able to send a wire to Ottawa on the morning that the loan drive starts stating that South Vancouver has subscribed its quota.

OBJECTIVE OF REGINA DIVISION $6,500,000

The objective for the Regina division in the forthcoming Victory Loan is $6,500,000. This is an increase of $2,500,000 over the objective for last year, although the division actually raised last year the sum of $6,300,000. The objective for Regina has been placed at $2,000,000 as compared with $1,500,000 last year. The distribution of the objective of $6,500,000 among the subdivisions is as follows:—

Regina city	$2,000,000
Regina subdivision	1,650,000
Moosomin subdivision	500,000
Strassburg subdivision	675,000
Balcarres subdivision	425,000
Davidson subdivision	400,000
Wolseley subdivision	400,000
Wawota subdivision	300,000
Broadview subdivision	150,000
Total for division	$6,500,000

NANAIMO SETS QUOTA AT HALF A MILLION

At a meeting of representative citizens of Nanaimo, B.C., held on October 11th, the initial steps were taken in the organization of a committee to carry on a campaign in Nanaimo district for the sale of bonds in connection with Canada's second Victory Loan. The meeting adopted as its slogan "Half a Million for Nanaimo," and no stone will be left unturned until the goal is reached.

Mr. John M. Rudd is chairman of the local committee and Mr. Thomas B. Booth secretary, a publicity committee being appointed by the meeting as follows:—Mr. John C. Dakin, Mr. Fred. Jepson, Mr. George A. Beattie, Mr. Harvey Murphy and Mr. Cyril A. Bate.

It is the intention of the committee to make a thorough canvass of every home and business house in the district, Nanaimo's territory extending from Nanoose Bay on the north to Granby Mines on the south, taking in Gabriola Island, the other islands of the Gulf being covered by Victoria.

HON. C. R. MITCHELL,
Chairman, Alberta Victory Loan Committee.

CANVASSERS' COMMISSIONS IN REGINA

At a meeting of the Regina city executive of the Victory Loan, it was decided by motion that credits and commissions should go to canvassers who get the subscriptions provided the subscriptions are solicited in their own allotted district. Captains are being appointed for the various districts and organization for the campaign completed as soon as possible. It was decided to make use of the canvassers offered by the commercial travellers, the Elks, the K. of C., the Rotary Club, and all other organizations who see fit to offer their services.

NORTHERN ALBERTA ORGANIZATION

The following is the personnel of the Northern Alberta committees:—

Executive Committee.—Hon. Chas. R. Mitchell, provincial chairman for Alberta; James Ramsey, chairman; A. M. Frith, vice-chairman; W. Ross Alger, secretary; G. R. Peden, treasurer; Julian Garrett, chairman of statistics; M. R. Jennings, chairman of press committee; M. J. Hutchinson, chairman of publicity committee; B. F. Blackburn, divisional chairman; H. Milton Martin, divisional chairman; F. B. Matthews, divisional chairman; E. F. Racey, divisional chairman; H. D. Heaney, divisional chairman; J. J. Duggan, divisional chairman; Chas. E. Darby, divisional chairman; N. A. Kilburn, divisional chairman.

General Committee.—R. L. Greene, E. C. Pardee, J. E. Brown, John Blue, A. U. G. Bury, Chas. W. MacKelvie, Prof. F. W. Sheldon, Dr. H. L. Collins, John W. Wood, J. A. Kinney, C. G. Scarth, W. L. McBeth.

Finance Committee.—A. E. Scrase, chairman; Geo. H. Gowan, E. C. Pardee, W. Ross Alger; Hon. Chas. R. Mitchell (ex-officio).

Publicity Committee.—M. J. Hutchinson, chairman; M. R. Jennings, E. Benson, B. F. Blackburn, L. M. Treffry, J. Michaels, F. G. McDermid, M. Brown, H. P. Brown, John Blue.

Special Subscriptions Committee for Edmonton.—Mr. James Ramsey, chairman; Mr. A. M. Frith, Mr. B. F. Blackburn, Mr. Percy W. Abbott, Mr. J. A. Brookbank, Mr. C. H. Bradley, Dr. R. B. Wells.

MOOSE JAW ORGANIZATION

"Victory Loan 1918" is making rapid progress to the centre of the stage in the Moose Jaw division (which occupies about 15 per cent. of the area of the province). In another ten days the spot light of public interest will be turned on this absorbing, and, as yet, novel feature of economics.

Mr. Saskatchewan Farmer as a bond buyer is looming up. Last year he bought sparingly and cautiously, for this game was new to him, and in most cases he would not have indulged in the bonds to any extent had it not been for the patriotic side of the case. By the way, it must be borne in mind that 5½ per cent, return on money does not create the sensation in the west where rates have been high, as it would nearer the Atlantic. On the first of June, however, Mr. Western Farmer experienced the pleasurable sensation of wielding the scissors on coupons, and, as a result, the effort on the part of the Victory Loan executive to gain his attention are not so strenuous. The response the organization has met with so far has been quick and warm. If the actualities back up the appearances, the Moose Jaw division should go "over the top," as a great part of the territory has been favored with good crops. There are many instances of yields of 40 bushels to the acre or more, and some of the grain growers will have upwards of $50,000 to sell from this year's yield.

The officers of the Moose Jaw division are as follows:—J. H. Kern, Sr., chairman; H. F. Stirk, vice-chairman; E. J. McMillan, secretary.

The executive committee are:—Messrs. J. H. Kern, Sr., Moose Jaw; H. F. Stirk, Moose Jaw; A. W. Jones, Moose Jaw; W. G. Baker, Moose Jaw; A. W. Mayberry, Moose Jaw; W. F. McBean, Moose Jaw; J. A. Caulder, Moose Jaw; W. F. Dunn, Moose Jaw; A. H. Dion, Moose Jaw; A. Halkett, Moose Jaw; J. G. Ogilvy, Moose Jaw; J. A. Simington, Moose Jaw; Thos. Miller, Moose Jaw; E. J. McMillan, Moose Jaw; J. P. Kennedy, Outlook; J. J. Fallis, Elbow; F. T. Hill, Riverhurst; J. T. Pomeroy, Gilroy; Geo. A. Turner, Tugaske; N. McDonald, Eyebrow; W. J. Richardson, Brownlee; Geo. Dewey, Morse; Jack Byers, Chaplin; Mr. Bradley, Mortlach; Gordon Ross, Moose Jaw District; A. E. Westbrook, Rouleau; A. McLelland, Avonlea; C. C. Shattuck, Mossbank; A. G. McNaughton, Mazenod; J. A. Forcier, Gravelbourg; Mr. Menzies (Kincaid), Meyronne; Thos. Murphy, Lafleche; W. E. Demminsson, Assiniboia; Mr. Parks, Verwood; Mr. Balfour, Willow Bunch; Fred Shanley, Wood Mountain; J. D. Turner, Central Butte.

Save! Remember that the 425,000 men who have gone overseas can't get home for a while, and they must be kept

VICTORY LOAN AT THE COAST

British Columbia Organization Includes Representatives of all Classes

From various points in British Columbia comes the word that the new Victory Loan will be enthusiastically received. At Kamloops, Merritt, Salmon Arm and Chase, organizations are completed, according to reports from E. A. Earle, who has had that district in charge, and all committees have been appointed at those points.

From up-coast points comes the same word from logging and timber camps where visits have been paid by local organizers and from the mining camps already there is a disposition shown to welcome the chance to assist the government in this, its second drive for funds to carry on the war.

At Nelson reports come from Fred. Sterling, organizer of that district, that there was a splendid meeting held in Nelson Thursday, and that all committees were struck and started work immediately with Mayor M. R. McQuarrie as chairman, Alex. Leith, vice-chairman, and G. A. Hunter, secretary. From every district comes word that the present financial conditions thoroughly warrant an optimistic outlook.

At Rossland, R. D. Mitchell, former president of the Miners' Union, has been appointed organizer for the mining camps at Rossland, Fernie, Kimberley, Trail, Cranbrook, Phoenix and Greenwood.

Unless members of a committee are appointed between now and Monday by the labor unions there will be no labor representation at the meeting. This, it is believed, will be but temporary, as it is expected that the various trades organizations will act upon the suggestion of the Trades and Labor Council to appoint members from each union at an early date.

Personnel Big Executive.

The committees as now constituted, with particular reference to Vancouver and environs, and who are expected to be present at Monday's meeting, follow:—

Executive Committee.—Mr. W. H. Malkin, chairman; L. Makovski, secretary; Stanley Burke, George Buscombe, William Farrell, George Kidd, John Nelson, F. W. March, William McNeill, J. P. Nicholls, F. W. Rounsefell, P. G. Shallcross, H. H. Watson, E. Frank Parsons.

General Committee.—A. E. Austin, C. S. Battle, E. H. Beazley, E. Stanley Burke, H. R. Budd, George Buscombe, George Bushby, B. A. Cunliffe, J. A. Cunningham, J. D. Byrne, William Farrell, T. W. Fletcher, J. Ellis, Julius H. Griffith, R. H. Gale, J. E. Hall, R. Kerr Houlgate, H. W. Dyson, T. H. Kirk, Ernest Evans, E. C. Knight, W. H. Leckie, T. W. B. London, Edward Lipsett, J. J. Coughlan, E. W. Hamber, Robert Kelly, W. G. Murrin, George Kidd, John Nelson, F. W. Marsh, William McNeill, J. P. Nicolls, Captain C. H. Nicholson, E. Odlum, Tate McEwen, Robertson, F. W. Rounsefell, Jonathan Rogers, J. Fyfe-Smith, Chris. Spencer, Campbell Sweeny, P. G. Shallcross, George Smellie, J. A. Tepoorten, C. E. Tisdall, W. Blake Wilson, H. H. Watson, R. V. Winch, F. Wesbrook, Gilbert Blair, E. F. Parsons.

Consuls Are Included.

Consuls of all the belligerent countries at war with the Central Powers, residing in Vancouver, have been added to the general committee, including United States of America, Hon. G. N. West; Belgium, J. M. Whitehead; Brazil, S. J. Emanuels; China, Lingo Wang; France, E. Chevalier; Honduras, R. Maitland; Italy, N. Masi; Japan, S. Ukita; Peru, H. G. White; Russia, C. Ragosin; Greece, P. Bancroft.

Speakers' Committee.—J. N. Ellis, chairman.

City Committee.—Mayor Gale, chairman; Frank Parsons, vice-chairman.

Finance Committee.—F. W. Rounsefell, chairman; J. P. Nicholls.

Business Committee.—H. H. Watson, chairman.

Publicity Committee.—F. W. Marsh, chairman; John Nelson, James Lightbody.

Provincial Organization.—P. C. Shallcross, chairman; John Kearns.

Index Committee.—Ashworth Anderson, chairman; J. R. Sutherland, Jonathan Rogers.

News and Press Feature Committee.—John Nelson, chairman; D. C. Jenkins, secretary.

COMPANY LAW IN CANADA

Recent Decisions Are Reviewed in Address Before Convention of Dominion Association of Chartered Accountants at Montreal

BY THOMAS MULVEY,
Under-Secretary of State for Canada.

The Bonanza Creek Mining Company Case.

(Continued from last week.)

You will notice that their Lordships of the Privy Council have stated that a construction like that adopted by Lord Justice Blackburn is the true one. It is necessary, therefore, to refer again to the facts of Riche vs. Ashbury Carriage Company as dealt with in the Exchequer Chamber, and the conclusions arrived at by Lord Justice Blackburn. There is no question but that the contract in question was beyond the purposes or object of the company as set out in the memorandum of association. The contract was entered into by the directors without the concurrence of the shareholders, and litigation was subsequently commenced. Thereafter a compromise was arranged in which the shareholders at a central meeting approved of the action of the directors. The Lord Chancellor in the House of Lords questions this statement of fact, but these are the facts which Lord Justice Blackburn found and upon which he based his judgment. It was the approval of the shareholders of the particular contract which forms the essential basis of Lord Justice Blackburn's judgment. The Sutton Hospital case is followed. There is no question of this decision. It was given in the year 1612 and has been followed in many cases. It holds that a corporation created by Royal charter is not restricted in any way in the business it may carry on, and this whether the purposes or objects of the corporation may be set out in the charter or not. The judgment holds that such reference to purposes or objects is not any limitation of the capacity of the corporation, but in the nature of what may be termed a *quassi* contract between the corporation and the Crown. If the corporation extends its operations beyond what is set out in the charter, or otherwise infringes upon these terms then grounds may be given for the cancellation of the charter by the Crown, and that is the only effect of a corporation entered into a contract beyond the purposes or object set out in the charter.

Having, therefore, in mind the clear statement of their Lordships of the Judicial Committee that the construction laid down by Lord Justice Blackburn was the true one, there appears to be no doubt that when their Lordships decided that a Canadian company was a common law company, they had before them considerations of the capacity of the kind of company Lord Justice Blackburn had in mind, and made no reference to and dealt in no way with the authority of the directors, and if we go to the judgment of Lord Justice Blackburn we find that in adopting his construction the authority of directors is clearly dealt with, and it is held that in matters beyond the purposes or objects set out in the charter the directors must go to the shareholders for authority.

Decision in Edward vs. Blackmore.

Dealing now with the case Edward vs. Blackmore, which I have referred to, the decision appears to rest upon the following statements, that a common law company had almost unlimited capacity to contract; that statements in the charter defining the objects do not take away the unlimited capacity; that even express restrictions in the charter do not limit the capacity of the company, but raise questions to be dealt with between the Crown and the company. These principles are all incontestable. The further grounds are needed that the contract was entered into by the directors and that it was under the seal of the company that the goods had been delivered and the contract executed, and because the president and general manager had apparent authority to execute the contract. It is submitted for the reasons given above that these do not constitute grounds for the decision except, perhaps, the delivery of the goods, which raised other considerations entirely. This decision begs fully the question of the authority of the directors to act in matters beyond those set out in the purposes and objects of the company. The judgment states that the president and general manager has apparent authority to execute the contract. How that authority was apparent is not stated, and it is confidently submitted that this statement is erroneous. If the contract had been within the objects of the company, unquestionably the authority of the president and general manager would be apparent. Moreover, the statement that as the contract was under the seal of the company, it was binding, begs the question. The seal of a company renders the company binding only where the seal is attached with proper authority. A company can act only through an agent and only through an agent duly authorized for the purpose. If the agent assumes to go beyond the authority conferred, the company is not bound; in fact, it has been held that a document signed by the duly elected officers of a company and sealed with the company's seal was a forgery, when it was shown that the officers signing had no authority in the matter in question.

The conclusion may be summarized:—

1. The Bonanza Creek Mining Company case holds that Canadian companies have the nature of common law or chartered companies and that the purposes or objects are not limited by any statement thereof in the charter.
2. The Bonanza Creek Mining Company case made no reference to the authority of the directors to carry on the business of the company, but indicated in adopting the judgment of Lord Justice Blackburn in Riche vs. Ashbury Carriage Company in the Exchequer Chamber as the true construction to be followed.
3. The contract in question in Riche vs. Ashbury Carriage Company was beyond the purposes or objects of the company in its memorandum of association, but was upheld by Lord Justice Blackburn because it had been unanimously approved of by the shareholders. In reaching the conclusion, Lord Justice Blackburn appears to have relied upon this approval and he stated that there would be no harmful consequence in such a construction because in the application of it the approval of the unanimous shareholders would always be required in entering into a contract beyond the purposes or objects set out in the memorandum of association.
4. While this construction may not be in terms applicable to a Canadian company, because under the Interpretation Act a majority of the shareholders may bind the company, it must be considered in the application of the decision of the Bonanza Creek Mining Company case to Canadian companies.
5. The correct deduction to be taken from the Bonanza Creek Mining Company case is that while the capacity of Canadian companies is unlimited, that capacity may be exercised in matters beyond the purposes or objects set out in the charter, only with the approval of a majority of the shareholders.
6. In the dealings of Canadian companies the authority of the directors is limited to the purposes or objects set out in the charter, and transactions beyond the expressed purposes or objects are not within the authority of the directors as agents of the company.
7. While the doctrine of *ultra vires* is put at an end by the Bonanza Creek Mining Company case in its application to the capacity of Canadian companies, the case law on the subject is still applicable to the authority of the directors.
8. The case Edwards vs. Blackmore, while it may be upheld upon other grounds, is in error in holding that because the president and general manager entered into the contract and affixed the seal of the company it bound the company.
9. There was no consideration in this case of any differences in management of common law and Canadian companies, and the law formerly held applicable to the latter was taken to govern the former without any study or explanation of their essential differences.
10. The general application of the judgment in Edwards vs. Blackmore would undermine public confidence in company management, and if it is on further consideration held to be the law, legislation should be enacted for the purpose of defining and regulating the authority of company directors.

Building permits of some of the western cities for the month of September show a great improvement. In Winnipeg the total is $144,850, against $94,800 in the same month last year. The total permits for the nine months this year are less than that of the corresponding period last year, but in the latter case there was included $475,000 for the parliament buildings, which would more than account for the difference. In Regina the figures for the month of September, 1917, are almost trebled. In Calgary the permits for the nine months of this year have crossed the million mark for the first time since 1914

IRON AND STEEL SHORTAGE

Manufacturers Discuss Methods of Preventing Industry from Being Tied Up.

The deputation of iron and steel users in Ontario that recently conferred with the Dominion War Trade Board with reference to the acute condition of the industry owing to certain embargoes placed by the United States, which are affecting the output of war contracts, made their report on October 16th at a meeting in the offices of the Canadian Manufacturers' Association. Major Lawrence L. Anthes, president of the Toronto branch of the Canadian Manufacturers' Association, presided, and read the report.

Major Anthes explained that in view of the further embargoes of basic metallic materials, and the restrictions of Canadian priorities by the United States Government, and the inability of the Canadian producers of raw materials to meet the demands, the users of these materials were becoming alarmed, lest they should be compelled to cease operations and be left with idle plants on their hands. The Major stated that Vice-Chairman Jones of the Dominion War Trade Board represented to the deputation that everything possible was being done by the board to put into blast again a number of furnaces in Ontario that have been out of commission for some considerable time.

Putting Furnaces Into Commission.

They were informed that the furnace at Midland will resume operations some time this month, and that the furnace at Parry Sound is being overhauled and the docks there being put into shape, with every indication that iron will be turned out there early next spring. Steps have also been taken to have the furnace at Port Arthur put into commission again, it being held up for the time being owing to the fact that the United States Government had refused to supply coal for coke purposes.

As coking coal bi-products are greatly essential in the manufacture of explosives, this restriction having been placed by the United States. the United States War Trade Board claim they cannot consistently supply coal to Canadian ovens to be manufactured into coke. The matter was stated to be still under consideration with Washington. Outside of Ontario one company has erected a new stack. Major Anthes said Vice-Chairman Jones expressed the opinion that the Dominion War Trade Board believed Canadian manufactuerrs would obtain relief from the new sources of supply before long.

It was pointed out, however, that the country's normal requirements of 1,000,000 tons of iron and steel per annum had been increased to 2,000,000 tons per annum. Regarding steel scrap exportation this had been prohibited, with the result that a very large tonnage had accumulated in Canada. The country had been scoured for cast scrap and this had been used by foundrymen to such a large extent on account of their inability to secure pig iron that there was very little scrap left in Canada.

Deprecate "Cost Plus" Contracts.

Reference was made to the effect of awarding cost plus contracts to Canadian plants by the United States, and the view was expressed that this, if continued, would tend towards the utter demoralization of Canadian industrial conditions and ultimately unfitting Canadian manufacturers to meet the keen competition that will confront them after the war. The reason that the United States had placed so many shell contracts in Canada was because Canadian manufacturers of shells have made a great success of the business, whereas manufacturers in the United States had not, in some instances, reached the same standard set up by Canadian manufacturers. It was stated that the contracts emanating from the United States for shell orders did not affect the situation because the contracts had been accepted by Canadian manufacturers only on condition that the United States supply the materials which went into them.

Considerable discussion took place on the question of standardization, several manufacturers holding that many concerns attempted too great a variety of products. It was shown that the advantage of such standardization would tend to reduce the stocks and enable manufacturers to concentrate on fewer sizes reduce the cost of production and overhead charges. The conclusion reached was that the time was opportune for manufacturers to get into closer co-operation with the Dominion War Trade Board.

The meeting then resolved itself into a section under the auspices of the Canadian Manufacturers' Association, and appointed a committee to take up all questions affecting that section with the Dominion War Trade Board. The committee selected embraces Messrs. Major L. L. Anthes, of Toronto; A. Hutch, of Hamilton; H. Biggar, of Hamilton; C. G. McGhie, of St. Catharines; J. N. Shanston, of Toronto; Arthur White, of London; J. C. Notman, of St. Catharines; H. J. Waddie, of Hamilton; P. McMichael, of Toronto; W. H. Shapley, of Toronto; H. W. Fleury, of Aurora; R. Harmer, of Hamilton; W. W. Clare, of Preston; A. R. Page, of Hamilton, and W. E. Skelton, of Hamilton.

DOMINION FINANCES IN SEPTEMBER

Dominion revenues, while showing a decline for September, are in a substantial increase for the six months period. Revenue on consolidated fund account for the six months ending September 30 was $140,982,901, as compared with $127.477,904, the total for the six months ending September 30, 1917. Expenditure on the same account was: Six months ending September 30, 1918, $61,423,327; same period, 1917, $50,184,261.

War expenditure for September was $39.484,049, in comparison with $36,345,695 for September. 1917. For the six months' periods, war expenditure was respectively: 1918, $103,064,324; 1917, $87,772,857.

During September the net debt increased by approximately $28,000,000. On September 30 it stood at $1.224,227,892.

LIFE INSURANCE AND SAVING

The constructive influence of American life insurance as a product of free government and as a great teacher of thrift will be emphasized at the 12th annual convention of the Association of Life Insurance Presidents, which will be held at the Hotel Astor, New York, on Thursday and Friday, December 5th and 6th, 1918.

The theme of the meeting will be freedom and thrift in nation and world. It is expected that the program will develop a broad discussion along the line of indicating the national progress that is made possible under the influence of a free government in conjuction with an intelligent and voluntary practice of thrift. In this connection there will be a discussion of thrift agencies, including the important one of life insurance, which has found its greatest development in the United States. There will be a survey of what the various thrift agencies have contributed towards national progress in peace annd war times, with an attempt to visualize what may reasonably be expected from them in the important period of reconstruction. Representative men in other lines of business, as well as public officials, will be invited to join with the life insurance executives in discussing plans for further development of the nation's thrift agencies in preparation for the increased demands of the immediate future.

This thrift conference will also include a study of conservation of human resources, under which head there will be a discussion of recent developments of interest to public health reform. It is believed, for instance, that a substantial improvement in public health conditions could be obtained were it possible to apply the lessons of military sanitation to peace times. Another topic to be discussed will be the vocational retraining of maimed and disabled soldiers which is being undertaken by the United States Government.

The December meeting of the National Convention of Insurance Commissioners will be held in New York earlier the same week, as will also the annual meeting of the Association of Life Insurance Counsel. Those in attendance at both these conventions will, in accordance with custom, be invited to attend the Life Presidents' sessions.

EVERY six months, when you cut a coupon from a $50.00 Bond, the value of the Bond is still $50.00.

STRIKES AND LOCKOUTS PROHIBITED

Stringent Order in Council Passed by Dominion Government—For Duration of War

Provision having already been made for prompt and equitable settlement of all matters of dispute between employers and employees in industries affected by the Industrial Disputes Investigation Act, an order in Council was passed on October 11th, forbidding, for the duration of the war, strikes and lockouts, and imposing severe penalties for violation of the law.

Any person violating any of the regulations is made liable upon summary conviction to a penalty not exceeding $10,000, or to imprisonment for a period not exceeding six months, or to both fine and imprisonment.

Any male person, employee or employer, of military age, who violates any of the regulations, and any director of a company who, being of military age, acquiesces in violation by the company of any of the regulations, shall be deemed to be a soldier enlisted in the military forces of Canada and subject to military law for the duration of the war and of demobilization thereafter. He shall, furthermore, forfeit any exemption granted to him and any right to apply for or obtain exemption from military service under the Military Service Act.

Announcement of these important regulations was made by Sir George Foster, acting Prime Minister, following a meeting of the Cabinet.

The action taken may be regarded as the corollary of measures already enacted providing facilities for the equitable settlement of industrial disputes, but not penalizing those who fail to avail themselves of these facilities, or who refuse to be governed by the decision reached.

Absolute Prohibition Now.

In these various measures, guaranteeing employer and employee just and ready means for adjusting their differences, there has been no provision for enforcement of the orders and decisions of the board. Neither has there been prohibition of strikes or lockouts after report has been made by a Board of Conciliation.

The new regulations absolutely prohibit, during the continuance of the war, strikes and lockouts in connection with industries or railway operations which are essential to the efficient performance of Canada's duty in the prosecution of the war.

By the regulations it is unlawful for anyone, during the war, to order or participate in a lockout or strike, as defined in the Industrial Disputes Investigation Act, in any industry mentioned in that Act or in connection with the operation of Canadian railways, before, during or after an investigation by a Board of Conciliation, or by a Board of Appeal, or the Board of Adjusters. Any employer of labor is guilty of an offence and liable to the penalties above stated who, during the war, shall discharge or refuse to employ workers (other than those holding positions or employment which shall be, in the judgment of the Board of Appeal or the Board of Adjusters, determined to be incompatible with membership in a union), merely because they have membership in trade unions, or for legitimate trade union activities outside of working hours.

Every worker is guilty of an offense and liable to the above-mentioned penalties who, in the exercise of his right to organize, uses coercion or intimidation of any kind to influence any person to join his organization.

Decisions Made Binding.

Every decision or order of any Board of Conciliation will be binding if not appealed from within 30 days after it is rendered.

Every decision or order of the Board of Appeal or Board of Adjusters will be binding on all persons affected thereby.

Any person who, during the war, fails to comply with the orders of these boards, will be guilty of an offense and liable to the penalties already mentioned.

Senator Gideon Robertson was asked for a statement regarding the new order in Council. He said in part:

"The various means of adjustment provided have proven ample and satisfactory except to those who have refused to use them.

"In peace times no such order would be tolerated for a moment, nor will it be continued when the need of it shall have passed.

"Every employer of labor must now agree to a fair investigation, and cannot lock out or discriminate against workmen for legitimate trade union activities, and must accept and make effective findings made.

"When the end of the war is in sight and before demobilization occurs, I foresee a widespread attempt to reduce wages, which ought not to occur, at least until the cost of living has been greatly reduced.

"Employers are prevented by the Industrial Disputes Act from reducing wages except by mutual consent of employees affected, or until after the dispute has been the subject of reference to a board. This feature is bound to be distinctly advantageous to wage-earners.

"The order in Council will provoke much criticism from a portion of our people, but it will heartily be approved by the disinterested public.

"It should correct in part some of the grievances our Great War Veterans have respecting aliens resident in our country. It ought not to bring any disability to labor organizations, but it will assist in exercising proper control over our enemies at home during the remainder of the war.

"Sound-thinking labor men in Canada will know that the order is and can be but a temporary measure, and born of urgent need, which can not always be announced in advance or fully explained."

INSTITUTE OF ACCOUNTANTS

The annual general meeting of the Institute of Accountants and Auditors of the Province of Quebec was held on October 15th at La Chambre de Commerce du District de Montreal and the following officers were elected for the coming year: President, Mr. Georges Gonthier; 1st Vice-President, Mr. J. L. Apedaile; 2nd Vice-President, Mr. M. L. J. Lacasse; Treasurer, Mr. J. J. Robson; Secretary, Mr. Henri Viau. Members of the Council: Messrs H. J. Ross, A. W. Cole, L. A. Caron, of Montreal, and J. A. Larue, of Quebec.

SAVINGS BANK OF SOUTH AUSTRALIA

An annual report of the Savings Bank of South Australia for the year ended 30th June, 1918, indicates that recent banking experience in the Australian Commonwealth has been similar to that in Canada. Bank deposits and assets have, generally speaking, grown rapidly. The number of total transactions during the year was 1,205,339, or an increase of 58,914 as compared with last year. The amounts deposited total £6,666,433, an increase of £1,097,094. The total amount at the credit of depositors is now £11,587,442.

This bank has twenty-eight country and suburban branches and 278 country and suburban agencies. In addition to receiving current and saving deposits, it also operates a penny bank department.

HAMILTON SOLDIERS' INSURANCE

On Wednesday, October 16th, a deputation from the city of Hamilton, Ontario, waited on the Provincial Premier and Secretary, and asked what legislation the Government would sanction to enable them to take over city insurance on soldiers now being carried by insurance companies. The deputation included Mr. S. H. Kent, City Clerk; Mr. F. R. Waddell, K.C., City Solicitor, and members of the Board of Control. Sir William Hearst, the Premier, asked that he be furnished with a written statement of the matter with all statistics.

At the outbreak of the war the city of Hamilton undertook to insure its soldiers in insurance companies, taking out $500 policies on single men and $1,000 on married men, on the 20-year endowment basis. These premiums are still being paid. Later, however, the city passed a benefit by-law, undertaking to carry the insurance itself on the men who enlisted. As a result 8,300 men are insured under the benefit by-law and 1,700 in insurance companies. The city now wants to take over the insurance of all the men. The men insured in the companies were told that they could take over the payments on the policies when they returned, but few of them have so far accepted this offer.

The war expense does not end when the fighting stops. Save to meet it!

NEW SEED GRAIN LOAN SYSTEM

Banks Now Make Loans Upon Security of Crop and Homestead Entry

The entire system of supplying seed grain for needy settlers and of collecting therefor has this year been overhauled, and what is virtually a new system throughout has been put into effect. At the instance of Hon. Arthur Meighen, minister of the interior, a conference was held with the western provincial governments in the city of Regina and as a result arrangements have been completed for the fair division of responsibilities as between the Dominion and provincial authorities.

In 1914, when seed grain relief was necessary, the Government made advances directly to the settlers, bought the seed, shipped it to internal elevators, where it was cleaned and sacked and re-shipped to points of distribution. The cost of handling in consequence added considerably to the price of the seed. Owing to present conditions with the prevailing high price of seed, it was felt that the desired result could be effected more economically and more satisfactorily for the settler by a system that would enable him to purchase the seed locally. The Canadian Bankers' Association has agreed to co-operate, and arrangements have been completed with the banks whereby loans can be made to needy settlers on unpatented Dominion lands. The rate of interest on these advances will not be more than seven per cent.

Applies to Municipality.

A settler needing assistance must apply to the secretary-treasurer of the municipality in which he resides, or if the district be unorganized, to the provincial officer of the department of municipal affairs. The application having been verified by both the municipal and Dominion authorities, the bank makes the necessary loan, taking the usual seed grain security and a lien upon the unpatented entry. Payments are due on January 1, 1920.

As a result of the policy established, the settler can make his own arrangement in regard to the purchase of seed, although if there is none available locally the Department of Agriculture is arranging for shipments to be sold to the farmers at cost.

The Government guarantees the bank to the extent of principal and five per cent. interest only. Should the bank not collect the obligation, that is all it receives. On the collections actually made by the banks the Government pays a commission of one per cent. The minister is confident that this arrangement will effect an important saving in distribution and collection expenses, and that it will go far towards confining advances to actual needs, and will result as well in a quicker and more business-like discharge of obligations incurred.

An order-in-Council has been passed embodying the above arrangements, and the necessary machinery is being put in motion immediately by the Department of the Interior.

Farmers Not Repaying Loans.

It is reported to the interior department that a number of persons, who, following the crop failure of 1914, in parts of western Canada, received substantial assistance from the Dominion Government by way of seed grain, fodder and relief, are endeavoring to evade their responsibility and are not attempting to pay their indebtedness, even though they have good crops and are financially able.

They prefer to pay the low rate of interest, five per cent., which was charged by the Government on these advances and use their ready money for other purposes.

The collection staff of the department, it is announced, is visiting districts where it is reasonable to expect that collection may be effected without undue hardship and these collectors are being instructed, if necessary, to get the amount by seizure, where they are convinced that those indebted are endeavoring to evade their responsibility, although financially able to pay.

NEWSPRINT ORDER STANDS

But Commissioner Pringle Makes Other Recommendations Regarding Payments.

Pending the decision of the Newsprint Appeal Tribunal in the matter of the appeals of the publishers and also of the manufacturers from the recent order of Commissioner Pringle fixing new prices for newsprint, the order issued by the Commissioner will not be varied. This is the feature of a judgment given by Commissioner Pringle on October 10th, following a motion made by representatives of the publishers to have the increase in price stand in abeyance until the appeal tribunal has rendered a decision.

In regard to the retroactive feature of the order providing that the increased prices shall date from July 1, the Commissioner, in his judgment made a recommendation to the manufacturers that they should give publishers desiring such a privilege the right to make their payments during a period extending over three months.

In the proceedings before the Commissioner, the publishers were represented by Mr. P. D. Ross, of Ottawa, and Mr. J. E. Atkinson, of Toronto. Mr. Ross, in requesting the Commissioner to vary his order increasing the price of newsprint from $2.85 to $3.45 per hundred pounds, stated that it was the intention of the publishers to appeal and to push their appeal with all possible speed. He said that this suggestion would be in accordance with ordinary judicial procedure. Apart from this, however, many publishers were finding it difficult to meet the situation. These difficulties would be lightened if they were given a longer period in which to take the necessary steps to increase their own revenues.

Manufacturers' Counsel Objects.

Mr. George Montgomery, K.C., on behalf of the manufacturers, opposed the request of the publishers. The manufacturers, he said, were making newsprint at a price which yields them no profit. Some were selling at less than the cost of manufacture. He declared that the commissioner could not vary his order because the order in Council constituting the Appeal Tribunal provides that the commissioner's orders remain effective until appeals are disposed of.

Mr. J. F. Orde, K.C., on behalf of the E. B. Eddy Company, said that as the manufacturers as well as the publishers were entering appeals, it would be advisable to let matters take their course.

Publishers Stand Firm.

A long and somewhat informal discussion ensued in which the suggestion was made by the Commissioner that the representatives of the manufacturers and publishers present might come to an amicable agreement as to the terms and conditions for the payment of the sum due to the former owing to the retroactive features of the order.

Mr. Atkinson said it was not the desire of the publishers to deal with the matter in this way or to recede from their request that the increase in price should remain in abeyance pending the decision of the Appeal Tribunal.

In giving judgment Commissioner Pringle said that no good purpose could be served in discussing the merits of the question because the order was an interim order subject to appeal within thirty days. He agreed that the terms of the order in Council provided that his orders should remain effective until appeals were disposed of. The Commissioner stated that during a period of sixteen months the mills had been supplying newsprint at an average cost of $52 per ton, which did not give them much profit. He referred to the judgment given by the Appeal Tribunal across the border, stating that evidence had been adduced to show that the increase in the cost of newsprint production had been anywhere from $6 to $10 per ton since April 1.

NEW EMIGRATION BILL

A published despatch from the Colonial Secretary to the Dominions reveals the history and intention of the new Emigration Bill, and describes the amendments proposed which chiefly meet the objections raised by the Dominions. Emigration from the United Kingdom will be controlled by a small body nominated by the Government, with a consultative board including representatives of the Dominions. The Dominions' immigration authority will be exempt from the ordinary passage broker's bond and from the usual supervision of their immigration literature and propaganda.

BRITISH COLUMBIA ELECTRIC RAILWAY

The defeat of the plebiscite on the 6-cent fare proposal has further complicated the transportation situation in British Columbia. It is said that the only course now left open to the City Council in view of the 2 to 1 defeat of the referendum, is to continue its court action to restrain the British Columbia Electric Railway from collecting the 6-cent fare, which it is at present charging. The matter of the renewal of the franchise for another five years also becomes more complex, as the company has insisted that the six-cent fare be made a part of the agreement. Few jitneys are operating on the streets at the present time.

Lend Your Money— Give Your Time

Let every Canadian measure his responsibility towards the Victory Loan 1918 according to his ability to work for its success.

While to the people at large, the call comes as an appeal for dollars, there are many who must do more than subscribe to the loan, if they are to fulfil their obligations to their country and its brave defenders.

There are men in Canada who, because of the prominent positions they occupy in the world of business and finance, are especially fitted—and specially called upon—to influence others.

If you—in addition to laying aside every available dollar for the loan—can induce friends, business associates and employees to subscribe, then to you comes the call for service, as well as the call for money.

Think of the men and women you could, by a word, induce to subscribe—people who, without that word from you—might remain in ignorance or apathy, might fail to buy a Victory Bond, or buy less than they should.

First see that every dollar you yourself can find, is put to real use in the cause of Freedom. Then, having loaned to the limit of your capacity, work to the limit of your ability, to influence your friends and your employees and all who look to you for guidance—that the call may be widely heard and fully answered.

Do your part to make the Victory Loan 1918 a success

Issued by Canada's Victory Loan Committee,
in co-operation with the Minister of Finance
of the Dominion of Canada.

100

WHAT THE VICTORY LOAN MEANS

Our Participation in the War, and Our War Orders, Depend Upon Success of Loan

BY E. R. WOOD,

Chairman, Dominion Executive, Victory Loan, 1918.

One year has elapsed since we prepared to subscribe the first Victory Loan (our fourth loan) issued in November, 1917. We then realized clearly, and for the first time, that Great Britain had reached the point at which she was compelled to borrow funds in the countries in which she is making her war purchases. This was, and is, an extremely important consideration for Canada, because our activities, prosperity and assistance in the war depend almost entirely on our ability to market our factory and farm products in the United Kingdom.

When we were asked to subscribe to the Victory Loan, we were enjoying what we may term the prosperity of war, due to the vast volume of orders placed in Canada by the United Kingdom. These war orders were, and are, the backbone of our general position.

We were faced also with certain results of the entry of the United States into the war. The most serious was the losing of that money market to our financial requirements. During 1915 and 1916 Canada was able to subscribe the greater part of its war loans, leaving a portion of them for subscription in the United States which also financed a large part of our ordinary requirements. The new situation created the necessity not only of making Canada's 1917 Victory Loan an unqualified success, but also of financing the provincial governments, municipal and corporation requirements, in addition to taking up maturing obligations in the United States. These obligations in ordinary times would have been renewed in that country.

With the subscription of a large Victory Loan in prospect, and these serious financial factors governing the situation, the market for bonds other than war issues was at a complete standstill, and the outlook was not good.

The trend in the financial position in the United States during the past three-and-a-half years, so far as Canadian borrowings are concerned, is shown in the following table:—

Year.	Total provincial and municipal bond issues.	Purchased by U.S.	Percentage share purchased by U.S.
1915	$110,508,000	$64,094,000	58
1916	80,014,000	57,610,000	72
1917	32,404,000	8,425,000	26
1918 (8 mos.)	61,005,000	1,700,000	2.78

When the United States entered the war in April, 1917, we were therefore faced with two important factors—namely, that Great Britain could not pay cash for her purchases in this country and that the United States could no longer help to finance Canada. That was the delicate and dangerous situation. The success of the Victory Loan met that situation completely.

Cause of Great Business Activity.

The great business activity resulting from the issues, created additional funds for investment. In due course, it afforded sufficient surplus funds in our own country to finance not only the requirements of war, but also credits for the United Kingdom and loans to our provincial governments and municipalities. During the first eight months of 1918, Canadian investors having taken the large Victory Loan of last fall, have also been able to finance our provinces and municipalities to the extent of $60,000,000, as mentioned above. In addition, $50,000,000 of the 1917 Victory bonds have changed ownership, being bought by bona fide investors from holders who found it necessary or desirable to lessen their holdings. This wide and continued interest in the Victory bonds is no doubt due to some extent to the fact that the Canadian people have been educated by the Victory Loan campaign to invest their savings in Dominion government bonds.

It ought to be clearly understood that in approaching our next Victory Loan, we are faced with an equally serious situation. Only by the complete success of our 1918 Victory Loan can we continue to finance our requirements and carry on generally in the way we have during the past seven months.

The remarkable over-subscription of the 1917 Victory Loan completely changed the uncertain outlook which prevailed when the loan was offered to the public. It gave a new impetus to agriculture, commerce and prosperity. It invigorated our efforts in the war. It allowed, as already stated, our provincial governments, municipal and other borrowers to finance their requirements at home. In short, it gave another lease of life to the activities of the Dominion.

A Boon to Canadian Farmers.

For the farmer, the loan was able to finance the only purchaser who could buy his excess products—namely, Great Britain. In the fiscal year 1915, our farmers exported animal produce and agricultural products valued at $209,000,000. For the fiscal year ended March 31st, 1918, they exported no less than $740,000,000 worth of their output, the largest agricultural exports from this country, on record.

Manufacture Prospered by It.

For the manufacturer the Victory Loan continued to give the best export market he had ever possessed. Canadian manufacturers during the fiscal year ended March 31st, 1915, exported $85,000,000 worth of merchandise. That period included nearly eight months of war. For the 12 months ended March, 1918, they have exported over $636,000,000 worth of merchandise, an increase in three years of $551,000,000, or 648 per cent. It is interesting to note in connection with these exports that since the loan was raised, approximately $20,000,000 per month have been advanced to the Imperial Munitions Board at Ottawa for the purchases of Great Britain in this country. There have also been expended approximately $20,000,000 a month for other war purposes in Canada, including large purchases of farm products. This is a monthly total of $40,000,000 or, during the seven months from December, 1917, to June, 1918, a sum of $280,000,000.

950 War Contracts.

While the entire farming community has shared in the war orders, all the manufacturers, naturally enough, have not been benefited directly. Even so, contracts have been given to 950 manufacturers, and in July, 1918, 400 manufacturers were in actual contract relations with the Imperial Munitions Board at Ottawa. Up to June, 1918, our manufacturers have produced over 60,000,000 shells, 20,000,000 fuses, 74,000,000 lbs. of powder and 50,000,000 lbs. of high explosives. Of the 1,654,000 tons of steel used in our war work, 1,400,000 tons were produced in Canada. Contracts have been let in Canadian shipyards for 90 steamships with an aggregate dead weight tonnage of 375,000 tons. These orders have a value of $71,000,000.

National war plants have been established at a cost of $15,000,000 in Montreal, Renfrew, Trenton, Toronto and Parry Sound, where powder and high explosives are made, fuses loaded and forgings produced and aeroplanes built. These plants have been given their contracts by the board at the same prices and on similar terms as the independent makers of munitions and they have already amortized their cost to the extent of $10,000,000.

Large quantities of fir and spruce are being purchased by the Imperial Munitions Board in British Columbia for aeroplanes. The board now has 67 logging camps in operation.

Made Possible Big United States Orders.

As a collateral advantage to Canada, by reason of the development of capacity to manufacture in a large way, the United States have found it to their advantage to place orders for the production of munitions in Canada to an important extent; the United States supplies all the raw materials, Canada supplying the labor and experience. The benefit of this to the United States, as well as to Canada, will be understood from the fact that the 75 millimetre shell, which is the size for which the largest number of orders have been placed, both in the United States and Canada, were produced in Canada last month in a quantity in excess of the total production in the United States. The production of this size of shell in Canada now on account of the United States government is 255,000 per week, and is steadily increasing.

As a further evidence of the interest of the United States in the developed capacity of Canada, representatives of the marine section of the Imperial Munitions Board were asked to attend a conference called by the Emergency Fleet Corporation of the United States in Philadelphia on June 21st, for the purpose of ascertaining what assistance Canada could

give to them in the production of marine engines and marine supplies. Already large orders have been placed in Canada for marine castings and winches, and general supplies for the shipbuilding programme in the United States. Of course, it is obvious that this business from the United States will have a marked effect upon the exchange situation, as the money is practically all for wages, as the material is practically all from the United States.

Labor Demand Maintained.

The success of the Victory Loan insured a continued demand for all kinds of skilled and unskilled labor. High wages have been received and have helped to cope with the increased cost of living resulting from the effects of war for a long period. Agricultural, factory and other labor have earned good wages, giving a margin for saving.

The placing of $400,000,000 by the subscribers to the Victory Loan in the hands of the government, enabled the authorities to continue to finance the basis of our prosperity—namely, war orders from the United Kingdom. It assisted them also, to a marked degree, in seeing that Canada does its full part to support our troops at the front, to help feed the Allies, and to bring the war to a successful conclusion as speedily as possible.

The flotation of the Victory Loan, in short, has kept in motion and in good running order the complex, economic machinery of the country.

New Loan Must be Over-Subscribed.

Now with regard to Canada's 1918 Victory Loan, it is imperative that it should be well over-subscribed and even more successful than the 1917 loan. This is necessary, firstly, because we cannot continue to do our part in the war without the required funds; secondly, because we cannot obtain those funds unless the national activities are maintained at high pressure; and thirdly, because that end cannot be accomplished unless we finance the national activities which have such a vital bearing on the international situation and the conclusion of the war. It would be a disastrous error were we to be lulled, because of our prosperity, into a misunderstanding of the real situation. It cannot be emphasized too frequently that the safety of our national structure and our participation in the war, depend entirely upon the results of the 1918 Victory Loan.

Our Prosperity Depends Upon It.

Our prosperity during the past year was a direct result of the response to the loan issued last fall. The continuance of our prosperity during the coming year will depend upon the degree of success achieved by the Victory Loan of 1918. Unless we do even better than a year ago, we will jeopardize the prevailing prosperous conditions and activities which, in turn, allow us to participate freely in the conduct of the war.

There is not a legitimate reason why on this occasion we cannot better the results of the previous loan. We have done well in the past, both in the aggregate and per capita. At the same time, we realize that our position in Canada is a fortunate one, compared with that in European countries which are in the immediate zone of war. No one can reasonably contend that we have yet achieved the best possible results in regard to the raising of war loans. The evidence of better latent efforts are apparent on every hand. It remains only to organize and give effect to them. For example, while the total bank deposits in Canada on November 30th, 1917 were $1,547,000, they had decreased to only $1,541,083,-[illegible] on July 31st, 1918, a comparatively trifling decline of under $6,000,000, while the deposits in Canada at July 31st, 1918 are $1[illegible],000,000 greater than July 31st, 1917. This excellent record was achieved despite the subscription of the 1917 Victory Loan of $416,000,000, despite the absorption of $50,000,000 of those bonds sold by holders during this year, who desired to realize, and despite the purchase by our investors of $6[illegible],000,000 provincial and municipal bonds. These are substantial indications of Canada's ability to subscribe another large Victory Loan, because the national activities allowing the nation to make such a record as outlined above, have continued in a marked degree, making it possible to repeat and better the 1917 Victory Loan and general record of the country.

Great Britain having borne a tremendous burden of war for four years cannot be expected to finance her war purchases in this country. The United States is perfecting a vast war machine. Her financial resources are required for that purpose and to place credits at the disposal of the Allies. It is necessary, therefore, that Canada should raise the funds required, not only to carry on our normal and war activities, but also to advance substantial sums to Great Britain for her purchases here.

While in the United States the people have been asked to subscribe a Liberty Loan every few months, we, in Canada, have not been asked to subscribe a war loan since November, 1917, and will not be called upon to do so until 1918. This is an enormous advantage in every way. The long respite from war loan activities, has enabled the 1917 Victory Loan to be splendidly absorbed and distributed, has in addition created a healthy market for provincial and municipal bonds, and has allowed business generally to proceed without the temporary halt which war loan issues always bring. Furthermore, it is not too much to say that the maintenance of the market price of the 1917 Victory Loan at the issue price and the recent advance in the issue price constitute a record in war finance.

If satisfactory results are achieved with Canada's 1918 Victory Loan, the funds raised thereby will supply our needs for another year. That is an additional reason why every effort should be made to make the loan an unqualified success.

FISHERIES INCREASE IN VALUE

An increase of $13,143,666 in the market value of Canadian fisheries during 1917, as compared with 1916, is shown by a statement issued by the Department of the Naval Service. The statement shows that the total market value of Canadian fisheries for 1917 was $52,352,044, to which total the seas fisheries contributed $4,052,605 and the inland fisheries $5,299,439. The two provinces which chiefly showed increases were British Columbia and Nova Scotia. The fisheries of the former reached a total value of $21,558,595, which was $6,921,249 greater than the total for 1916. The figures for Nova Scotia were $14,468,319 in 1917, against $10,092,902 in 1916.

TO UTILIZE FISH HATCHERIES

With a view to securing the largest possible collection of eggs for the different fish hatcheries on both the Canadian and United States sides of the Great Lakes, conferences were recently held between officers of the Naval Department and the Ontario Provincial Department, and also with officers of the United States Federal Government hatcheries. Details have been completed for the fullest co-operation in egg-collecting work by the representatives of the three Governments with a view to assuring all the hatcheries on both sides of these waters being filled to capacity. As the fry from each of the hatcheries on Lakes Erie and Ontario go to the building up of the fisheries on both sides of the line, it is obviously equally in the interests of both countries that each of the hatcheries should be filled to capacity every year.

BRITAIN SPENDS NINETY MILLIONS IN FOODS YEARLY

The stupendous total of over $90,000,000 worth of meat and dairy products has been purchased in Canada by the British authorities in the twelve months just ended. All the commodities bought were produced on Canadian farms and the returns go to the farmer. A return has just been supplied by the Canadian section of the British Ministry of Food to the chairman of the Canada Food Board, covering the period from October 1, 1917, to September 28, 1918, giving the following values of purchases throughout the provisions section:

	Value.
Bacon and hams	$40,023,518
Frozen beef	16,637,366
Lard	250,285
Preserved meat (military)	1,239,300
Preserved meat (civilian)	59,800
Total	$58,210,269

The purchases by the Dairy Produce Commission (a separate body) made in the last summer season from May to September 21 were as follows:

	Value.
Butter	$ 912,794
Cheese	28,243,152
Condensed milk	2,778,663
Total	$31,934,609

Victory Loan Makes Possible Great Stimulus to Canadian Industry—Advances of $25,000,000 Monthly from Government

Victory Loan and Imperial Munitions Board!

There is a story of absorbing interest showing how the two are intertwined. Briefly stated it is this: The board has spent in Canada since the outbreak of the war no less a sum than $1,200,000,000. It has received advances out of the Treasury, from proceeds of previous loan issues, of $600,000,000. It is now receiving $25,000,000 a month, largely out of the last Victory Loan, as advances from the Dominion Government. Were it not for the ability of the Finance Minister to advance this money it would be impossible to place the huge orders for war supplies with the manufacturers of the Dominion.

Stimulant to Industry.

This great volume of new business has fanned into activity many dormant industrial institutions. It has created many new ones. There are from 250,000 to 300,000 persons engaged on war contracts, while another 50,000 are handling war supplies. Orders have been placed with 1,000 manufacturing institutions and at the present time there are over 400 manufacturers engaged in actual contractual relations with the board. Over 60,000,000 shells have been produced, 60,000,000 copper bands, 45,000,000 cartridge cases, 30,000,000 fuses, 65,000,000 pounds of powder, 50,000 pounds of high explosives. Over 1,800,000 tons of steel have been used in the production of war material, of which 1,450,000 tons have been produced in Canada.

Big Airplane Industry.

Seven national manufacturing plants, on which $15,000,000 has been spent, have been built up and are now being operated. An airplane industry of gigantic proportions has been created. The Dominion Government made an advance of $1,000,000. Six millions have been spent on buildings. We have built many machines, mostly for training purposes, but some bombing planes for the United States Government. We are turning out superior airplane engines for which there is a big demand.

The board has developed a great lumbering industry in British Columbia for the production of Sitka spruce for airplane construction. It has contracted for 250,000,000 feet of spruce and fir and the forests of the Pacific Province are alive with industry. This work is costing many millions and is being rapidly developed out of Victory Loan money.

Ninety Ships Being Built.

Ship building is another. The board gave contracts throughout the Dominion for 90 ships worth $66,000,000. It has bought the entire exportable supplies of wheat, cheese, butter and other commodities and the Government has advanced a great deal of the money to the British Government to pay for them.

This is a mere outline of some of the industries that have been created and developed by the Imperial Munitions Board. It has meant a tremendous expansion of our foreign trade, of our exports. During the past year we have exported in manufactures alone no less than $636,000,000, while in 1913 our exports of manufactures amounted to only $43,000,000. Surely the people of Canada see the benefit of this tremendous expansion. And they will remember their duty, namely, to subscribe in proportion to their ability to make the forthcoming loan a huge success.

NEWSPRINT TO BE CONSERVED

On October 16th R. W. Pringle, controller of newsprint, met in conference about thirty representative publishers of the Dominion to consider the matter of the conservation of newsprint during the period of the war. A number of proposed regulations recently placed in the hands of the publishers came under review and were discussed. These included suggestions that no new newspapers should be started during the period of the war and the limitation of the amount of space allowable for news.

The publishers generally expressed a willingness to do everything within reason to meet the desires of the controller, and individual publishers were heard as to their own particular difficulties in meeting the present situation arising out of the heavy increase in the cost of newsprint.

It developed during the conference that it is the desire of the United States War Board that Canadian publishers should reduce their consumption of newsprint by 15 per cent.

GOVERNMENT TO RUN CHROME MINES.

Under the terms of a recent Order in Council, the War Trade Board is ordered to take possession, and operate for a period of five years if necessary, any mines or property in Canada which are producing chrome ore, or have produced it in the past. This step has been taken by the Government because of war conditions, more particularly the lack of shipping, which have created a serious shortage of chrome ore for the essential requirements of Canada and allied countries. Comparatively extensive deposits of such ore exists in Canada, and it is the intention of the War Board to have those deposits developed to meet the shortage. In the event of the War Trade Board and the owners of mining properties being unable to come to terms as to the amount of compensation to be paid, the matter may be referred to the Exchequer Court for adjustment.

CARRIAGE FACTORIES, LIMITED

The shareholders of Carriage Factories, Limited, at the annual meeting on October 3rd, at the head office of the company, Excelsior Life Building, Toronto, received the report and statement of the company from the auditors, Marwick, Mitchell, Peat & Company.

The company owns and operates the Canada Carriage Company, Limited, of Brockville, Ont.; The Munro & McIntosh Carriage Company, Limited, of Alexandria, Ont.; The Heney Carriage & Harness Company, Limited, of Montreal, and The Tudhope Carriage Company, Limited, of Orillia, Ont. It also owns the controlling interest and operates the Canadian Briscoe Motor Company, Limited, of Brockville, Ont., but conducts the concern as an independent subsidiary and does not include its statement in the consolidated one below summarized. The Canadian Briscoe Company held its annual meeting on September 26th, and the report and statement by the same auditors showed that in addition to making up for a deficit on past operations since its formation in 1915, the company showed net earnings for the past fiscal year of eight months ending July 31st, but insufficient to warrant dividend payments.

The Carriage Factories management has long realized that the buggy and sleigh business is a waning one, and is developing new lines to offset the volume lost in the old lines. The manufacture and selling of commercial bodies for practically every style of motor truck on the Canadian market has been aggressively undertaken with real results. All year tops for all light four cylinder cars on the Canadian market is another new line developed to an extent that has outdistanced any Canadian competition and permits of a considerable saving to the buyer over the imported top. Sedan bodies for the Briscoe, and all other popular light four cylinder cars made in Canada, is another new line which is developing rapidly, and helping volume in another plant. Auto accessories, such as radiator covers, robes, cushions, rail bags, oiled clothing, and sporting goods, is yet another new line giving added volume for the harness plant.

Condensed Statement as of July 31, 1918.

340,000 TONS OF SHIPS

Enormous Industry Grows Out of War's Ravages and is Made Possible by Finances of the Victory Loan

The reduction of our mercantile marine by enemy action has created a large demand for shipping. It has imparted an impetus to the Canadian shipbuilding industry. Huge advances by the Dominion Government to the Imperial Munitions Board enabled that body to place valuable contracts for ships in all the yards of the Dominion.

The point to remember is that the money had to come from the resources at the disposal of the Finance Minister. It came out of the proceeds of previous loan issues. Further financing of the shipbuilding industry will have to be effected out of the forthcoming Victory Loan, and it is to the interest of every man, woman and child to get behind the loan so that there will be no chance of it being only a partial success. The Finance Minister needs a great deal of money for war purposes. The shipbuilding industry is a war proposition. Don't let it fail.

Depends on the Loan.

Sir Thomas White has said: "Every shipbuilding plant in Canada is working to-day at capacity—a fortunate situation which would not have been possible had it not been for the success of our last Victory Loan."

But just what the shipbuilding industry means to the people must be explained. The Imperial Munitions Board has on contract, or under construction in this country, 44 steel and 46 wooden ships, aggregating 340,000 tons of the value of $66,000,000. Eighty of these ships will be completed this year. In addition, the Department of Naval Service has secured contracts, including submarines for Great Britain and Italy; 550 motor submarine chasers for Great Britain and 36 for France, and a number of steel lighters, trawlers and drifters for Great Britain.

Need Many New Ships.

That, of course, is "some" business for an infant industry. But that is not all. The war is not going to last. It shows signs of a collapse, and there is going to be a lot of British and Canadian energy in the final punch. But when the war contracts are finished our yards must be kept busy, for new ships will be needed for many years, and Canada must be in a position to do a big share of the shipbuilding of the future. The Dominion Government is prepared. It is providing for an expenditure of $50,000,000, and has given orders for 24 ships, tonnage 135,000, value $26,500,000. Contracts for six leviathans costing $15,000,000 and having a gross tonnage of 29,000 tons, have been authorized but not yet signed.

To meet the demands of the ship yards the steel industry is given a filip. As a result of negotiations with the Government the Dominion Iron and Steel Co. will soon commence the erection of an immense steel plate rolling mill, and the Government has undertaken to purchase 250,000 tons of ship plates. This will be sufficient for between 750,000 and 800,000 tons of shipping. As steel plate rolling and shipbuilding go together the impetus to the latter means that there will be many thousands of steel artisans and laborers kept busy, adding to the wealth of the people.

Five Provinces Interested.

Five of the nine provinces are directly interested in the future of shipbuilding. The others are interested because the distribution of so much money means that they feel the thrill of prosperity. Everybody in the Dominion should figure the business aspect out. Victory Loan is a good business buy.

FRANCE TO CONTROL RAILWAYS

The French Cabinet has decided, as a necessary national defence measure, to introduce in the Chamber of Deputies a bill providing for the taking over by the Government of all French railways during hostilities and one year after peace has been declared.

The Minister of Public Works and Transport, according to the provisions of the bill, would assume direction of the railroads and would use the staffs and material all over the country indiscriminately as one system.

The measure would be only a temporary one and would not bind the future payment of interest to shareholders. The payments would continue under the same conditions as heretofore and the stockholders would receive remuneration equivalent to the available dividends paid in the years 1915, 1916 and 1917.

BRITISH COLUMBIA SALMON COMMANDEERED

Regulations were approved by the Governor-General on the 15th inst., providing for the commandeering of the British Columbia salmon pack. They require that British Columbia packers shall deliver to the British Ministry of Food the following percentages of their 1918 packs: Sockeyes, 100 per cent.; red springs, 100 per cent.; cohoes, 75 per cent.; pinks, 70 per cent. The price to be paid will be determined by the War Purchasing Commission. Provision is made for limiting the prices at which salmon may be sold to dealers in Canada.

INCREASE IN TELEPHONE RATES

A flat increase of 20 per cent. over existing local telephone rates is what the Bell Telephone Company is asking in its application to the Dominion Railway Commission for the requisite authority. The rates, if sanctioned, would be effective Nov. 20. It is also proposed to increase the cost of long-distance calls to a minimum of 10 cents for eight miles, and 5 cents for each additional eight miles, with the usual time limitations. A new "service connection charge" is also proposed, varying from $2 to $6, according to the cost of the phone service. This is presumed to pay for installation. To change a name $2 will be charged. Increased cost of operation is assigned as the reason for the increase.

The application is likely to be combatted vigorously, as municipalities all over eastern Canada are preparing for concerted opposition.

ST. LAWRENCE POWER AWARD PROTESTED

The Government has made a formal protest to Washington against the action of the International Waterways Commission in granting permission to the St. Lawrence Power Company to dam the south channel of the St. Lawrence River at Long Sault channel. An Order in Council has passed outlining the position of the Canadian Government. Canada takes the stand that under the Ashburton Treaty and later the Treaty of 1909, it is definitely stated that navigation in the boundary waters is not to be interfered with. The Government is of the opinion that in view of these treaties the International Commission had no right to take action. The Canadian Government does not wish to prevent necessary war work, and it is claimed that the Aluminum Company needs the power to increase its production. Canada asked that the American and Canadian Governments build the dam as a war work, to be removed after the war if required.

By the judgment the dam is to be removed in five years, or at the end of the war, but the Cabinet fears that by the end of that time the company will claim vested rights.

The Canadian Government has a fixed policy to develop the St. Lawrence power as a national project, and is anxious over the recent judgment. At present all Canada can do is to lodge a formal protest with the United States.

INDUSTRIES TO HAVE FUEL SUPPLY

The Fuel Controller for Canada has just concluded a general survey of the fuel consumption of certain industries in Canada, including clay products, building stone, enamel and sanitary ware, and window glass.

This action was taken in order to ascertain to what extent fuel consumption could be restricted, in sympathy with the restrictive orders that have been issued in the United States in connection with these industries. The Fuel Controller found that owing to war conditions the decrease in production in these industries ranged from 50 to 75 per cent., and that as a result a large number of plants throughout that portion of Canada lying east of Lake Superior have been unable to continue operations.

After a careful survey of the whole situation as it affects the various industries considered, and taking into account the absolute necessity which exists for the continued production of the now seriously restricted products of these industries, the Fuel Controller has concluded that, consistent with the preservation of the national interest, it would be inadvisable to take any step in the way of restricting the fuel supply to the various plants now in operation, which represent only a fraction of their prewar activities, and which are now devoted to the manufacture of absolutely essential products.

Save! Your dollars will be needed to pay Canada's war bill

Rates for Telephone Service

AS already announced, we find it necessary to ask the Board of Railway Commissioners for authority to readjust our schedule of rates for service.

Why should we ask that telephone rates be raised?

All fair-minded and thoughtful people will agree with the recent statement of President Wilson before the American Electric Railway Association:—

> *"A just price must, of course, be paid for everything we buy. By a just price I mean a price which will sustain the industries concerned in a high state of efficiency, provide a living for those who conduct them, enable them to pay good wages and make possible the expansion of their enterprises which will from time to time become necessary as the stupendous undertakings of this great war develop. We could not reasonably pay less than such prices. They are necessary for the maintenance and development of industry, and the maintenance and development of industry are necessary for the great task we have on hand."*

Public utilities, no less than private enterprises, must receive such treatment if they are to give an adequate service and meet the growing needs of the community.

The Bell Telephone Company

RAILROAD EARNINGS

The following are the earnings of Canada's transcontinental railways for the first two weeks in October:—

Canadian Pacific Railway.

	1917.	1918.	Inc. or dec.
Oct. 7	$2,842,000	$3,458,000	+ $616,000
Oct. 14	3,333,000	3,524,000	+ 191,000

Grand Trunk Railway.

	1917.	1918.	Inc. or dec.
Oct. 7	$1,014,812	$1,460,738	+ $445,926
Oct. 14	989,067	1,433,788	+ 444,721

Canadian Northern Railway.

	1917.	1918.	Inc. or dec.
Oct. 7	$ 758,500	$1,072,900	+ $314,400
Oct. 14	960,600	1,040,300	+ 79,700

MONEY MARKETS

Messrs. Glazebrook and Cronyn, exchange and bond brokers, Toronto, report the following exchange rates to *The Monetary Times*:—

	Buyers.	Sellers.	Counter.
N.Y. funds	2 3-64	2 5-64	....
Mont. funds	par	par	⅛ to ¼
Sterling—			
Demand	4.8530	4.8545	4.87½
Cable trans.	4.8640	4.8650	4.88½

Sterling demand in New York, 4.75 7-16.
Bank of England rate, 5 per cent.

In the city of Montreal it has been decided that notices are to be placed upon houses where the influenza contagion exists. This is for the assistance of the canvassers in connection with the Victory Loan campaign.

HYDRO POWER SHORTAGE IN CANADA

Sir Henry Drayton Applies to Washington for Release of Power

Sir Henry Drayton, Dominion power commissioner, informed a group of members of the Canadian Manufacturers' Association at a special meeting on the 18th inst., called to discuss the shortage of electrical energy, that he had taken the matter up with the United States government with a view to obtaining some relief for Canadian manufacturers and secure the release of 108,000 horse-power which is still being exported to the United States. Whether it can be done or not Sir Henry was not in a position to say. He was conducting the negotiations through the very best channels. It was entirely a matter of arrangement.

Sir Adam Beck, who was present, at the conclusion of Sir Henry Drayton's explanation of the whole matter, was asked if he had any statement to make, and he replied that he had no desire, but he would be prepared to answer any questions. Sir Adam then asked if any manufacturer present had been compelled through shortage of power to shut down indefinitely. There were no replies.

Still Optimistic.

Proceeding, Sir Adam said he was still optimistic in the matter of the supply of power. "We hope, if we are not disappointed in receiving certain equipment, to have more power available in the course of a few weeks," Sir Adam added. "By the combined effort of users in economizing as much as possible we will be able to carry the load until the full supply is available from the new installation of the Ontario Power Company, amounting to 50,000 horse-power. The power then available to municipalities will be 100,000 horse-power on a contract with the Ontario Power Company; 50,000 horse-power on a contract with the Canadian Niagara Power Company, and an additional 50,000 horse-power on the new temporary installation of the Ontario Power Company.

Asked what he thought of Sir Henry's explanation after the meeting, Sir Adam replied: "The power commissioner did not defend the Federal government in the criticism that I offered in my letter to him with respect to the shortage of power and the failure of the government to do certain things that could properly be done to give relief. He did not answer any of these questions."

Replying to Sir Henry, Sir Adam said the average daily peak of the Hydro was 139,050 horse-power, instead of 200,000 horse-power, as previously announced.

In reviewing the situation Sir Henry said that according to Chief Engineer Gaby, of the Hydro, the combined shortage of Hydro-Electric and Ontario Power systems on December 1, 1917, was approximately 102,000 horse-power. As the power shortage existed, there was only one way in which more power could be obtained, and that was by stopping the exportation. Sir Henry proceeded to explain the character of the agreements with the Federal and provincial governments under which the private power companies at Niagara Falls exported power. The total horse-power of these companies represented 406,000; they had the right to export 50 per cent. of their developed power, amounting to 203,000 horse-power, but those rights to export power from time to time had been curtailed.

Reviews Former Contracts.

"At the time the Hydro secured the Ontario Power Company," Sir Henry remarked, "it was exporting power under contract to the Hydro to the amount of 60,000 horse-power, but when the Hydro had acquired the company, and in the contract that the Hydro made, the Hydro itself guarantees the continuance of the supply of this 60,000 horse-power, and to use their best endeavors from time to time with the Federal and provincial governments to place the transportation company in a position to at all times lawfully carry out the terms of that contract.

"After the Hydro acquired the contract as a result of the negotiations between the Hydro and the Niagara Company, the company agreed to release for use in Canada during the period of the war 10,000 of the 60,000 horse power which they were entitled to, reducing the amount they were entitled to by that sum, leaving it but 50,000 horse-power. The Canadian Niagara Company was exporting comparatively large amounts, sometimes over 50 per cent of their total generation. I found that a shortage existed. We used that power in Ontario. There was no doubt in the world but that the exportation, apart from these contracts which the province had entered into, could be reduced, but I also found that the power which was being produced and exported to the United States was being utilized in essential war work, and that it could not be recalled without very grave injury and without the possibility of very grave consequences. In part, however, it has been reduced.

Export Rights.

"The Ontario Power Company now only have the right to export power on the peak to the extent of 37,500 horse-power, the Canadian Niagara 30,000 and the Toronto Power Company 13,500, the combined amount being 81,000 horse-power which on the peak can be exported. That amount is 122,000 horse-power short of what the agreements contemplated might be exported into American territory, but over and above this exportation of power on peak, the companies are also allowed to export an average power which brings up the total, the combined average of which aggregates 108,000 horse-power, which is 95,000 horse-power less than the amount contemplated by the agreements. It is absolutely impossible to cut off from the American market, or to make a greater cut than the amount by which the export rights were reduced.

"In my report to the government I did not arrive at that conclusion because the provincial agreements looked to the exportation of 50 per cent., or because the Hydro-Electric Commission covenanted to export 60,000 horse-power, but because I believed that it was in the best interests of the country that manufacturers in the United States, manufacturing war materials, ought not to be interfered with; that we should continue to send them a modicum of power and to receive from them in turn our proportionate share of coal, raw materials, etc.

Should Use Steam Plants.

"It has been said that the greatest use should be made of steam plants. I think that is quite right. It is also asserted that the Dominion Power and Transmission Company could be generating more steam, and that some work could be taken from the Hydro load and placed upon that company, and I think that is absolutely right. They have not got nearly as [illegible] the Dominion as they ought to have, but there are a whole lot of things we cannot do that we ought to do, and it just so happens that the Dominion Company has a frequency of 66⅔, and it again so happens that manufacturers and others do not fancy that kind of a frequency.

"One of the most expensive ways of producing heat is by electricity, and a tremendous amount is required to supply heaters that are used to keep people from getting cold. Is it better that obsolete and expensive plants should be run at the expense of the Canadian householder? But that is the alternative. We have just so much coal. What are you going to do about it?"

NATIONAL FINANCE COMPANY, LIMITED

The Yorkshire & Canadian Trust, Limited, of Vancouver, who are liquidators of the National Finance Company, Limited, which failed in 1914, have issued a statement reporting upon the progress of the liquidation. The prospects of the creditors and the causes of the delay in settlement were outlined as follows:

"The policy of the liquidator has been throughout, to keep the expenses of the liquidation at the lowest possible figures; to conserve the assets of the company, so far as is consistent with the necessity of winding up the company's affairs until a reasonable price could be obtained for them; to avoid litigation; and, to pay to secured creditors, with the least possible delay, any moneys derived from the securities to which they were entitled.

"A study of the assets of the company as they came into the hands of the liquidator, shows that practically all which were available as security, had been hypothecated in order to secure moneys during the period of the company's operations. As a result of this, any assets which were free from encumbrance were those which might be classed as 'cull assets,' not being acceptible as security, although their nominal value was large. In addition to the difficulty of disposing of these assets under the depressed conditions obtaining since the time of liquidation, we have now to contend with the various moratorium and war relief acts throughout the different provinces of Canada, so that no foreclosure actions or suits can be taken on a large portion of the agreements for sale mortgages and bills and accounts receivable held by the company; and under the circumstances no one will offer any suitable price for the purchase of these claims so that an early closing of the estate is impossible."

DECREASE IN CANADA'S TRADE

A decrease of $250,192,030 in the total trade of Canada for the first half of the present fiscal year, as compared with the same period in 1917, is shown by the trade statement issued from the Customs Department on October 11th. The trade of the Dominion for the first six months of the present fiscal year, which ended September 30, amounted to $1,087,232,880, while on the same date a year ago it had reached a total of $1,337,424,910. For the month of September alone, however, the trade figures show an increase of more than twenty millions over the same month of last year, the total beng $212,054,292, as against $191,370,412 in 1917. This is largely due to the jump in the export of domestic manufactured articles during the past month, which increased more than thirty-five million dollars. The falling off in the six months is chiefly in exports.

The statement shows a decrease in exports during the six-month period of $176,278,208 when compared with the first half of 1917. Imports during the same period show a drop of $65,383,010 in comparison with 1917. Domestic merchandise exported from Canada during the first half of the present fiscal year amounted to $590,585,514, while in 1917 it reached a total of $766,863,722. Imports entered the country to a total value of $445,532,214 this year, while in 1917 they were $549,925,224. Agricultural products exported from Canada during the first six months of the present fiscal year amounted to $133,683,806, while a year ago they reached a total of $260,654,960. This is a decrease of $126,971,154. Exports of domestic manufactured articles show a falling off of fifty-seven millions when compared with 1917. On the other hand, the exports of forest products this year were more than twelve million dollars greater than in 1917.

The National City Bank will establish an agency at Vladivostok. This agency is for the purpose of continuing the institution's Russian business during the suspension of its Petrograd branch.
